FIRST

ADDITIONAL SUPPLEMENT

TO

LOUDON'S ENCYCLOPÆDIA OF PLANTS;

COMPRISING

THE SPECIFIC CHARACTER, DESCRIPTION,

CULTURE, HISTORY, APPLICATION IN THE ARTS,

AND EVERY OTHER DESIRABLE PARTICULAR RESPECTING

ALL THE PLANTS

ORIGINATED IN, OR INTRODUCED INTO,

BRITAIN,

BETWEEN THE FIRST PUBLICATION OF THE WORK IN 1829,

AND

JANUARY, 1840;

WITH

A NEW GENERAL INDEX TO THE WHOLE WORK.

PREPARED BY W. H. BAXTER, JUN., UNDER THE DIRECTION OF J. C. LOUDON;
AND REVISED BY GEORGE DON, F.L.S.

FIRST

ADDITIONAL SUPPLEMENT

TO

THE ENCYCLOPÆDIA OF PLANTS;

BRINGING DOWN THE WORK TO MARCH, 1839.

Prepared by WILLIAM H. BAXTER, under the Direction of J. C. LOUDON;
and finally revised by GEORGE DON, F.L.S.

N.B. A † prefixed to genera or species indicates that such genera or species have been already registered, but are here repeated with more perfect details.

Page 8. CLASS II. — DIANDRIA. 2 STAMENS.

Order I. MONOGYNIA. 2 Stamens. 1 Style.

2500. 47*a*. *Belopérone*. Calyx 5-parted. Upper lip of corolla concave, lower one trifid. Stigma subulate. Capsule compressed from the base to the middle and empty; but swollen, and containing 4 seeds at top.
2501 64*a*. *Streptocárpus*. Cal. 5-cleft. Cor. tubularly funnel-shaped; Limb 5-lobed, nearly equal, oblique. Stam. 4: 2 front ones fertile; the other 2 tubercle-formed and sterile. Valves of capsule twisted. Stigma 2-lobed. Seed minute, naked.

Page 30. CLASS III. — TRIANDRIA. 3 STAMENS.

Order I. MONOGYNIA. 3 Stamens. 1 Style.

2502. 80*a*. *Bétckia*. Cal. 1-toothed, deciduous. Cor. funnel-shaped, 5-lobed. Caps. 1-celled, 1-seeded.
2503. 94*a*. *Streptanthèra*. Perianth 6-parted; tube very short. Anthers twisted round each other. Ovar. 6-augled, also a little twisted. Ovula kidney-shaped.
2504. 107*a*. *Anisánthus*. Spathe 2-valved, subringent. Perianth unilabiate; limb equal, 6-parted; upper segment long, cochleariform. Stigmas 3, dilated, entire. Capsule triangular, 3-valved. Seeds cumulated, winged.
2505. 114*a*. *Dietes*. Flower 6-parted, equal, spreading. Stigmas petal-like, bifid.
2506. 114*b*. *Leucocóryne*. Perianth salver-shaped, 6-parted, 3 fertile combined, and the 3 sterile on the limb, fleshy, and sometimes antheriferous. Style terete. Stigma simple.
2507. 114*c*. *Triteleïa*. Perianth funnel-shaped, 6-cleft. Stamens 6; upper ones opposite the petals. Stigma 3-lobed. Ovarium many-seeded.
2508. 117*a*. *Sisyrínchium*. Spathe 2-lvd. Calyx 0. Petals 6. Filaments connate. Style 1. Caps. 3-celled, inferior.
2509. 117*b*. *Renealmia*. Perianth 6-parted. Filaments connate or distinct. Stigmas 3, involute, filiform, acute. Capsule obovate. Seeds angular.

Page 76. CLASS IV. — TETRANDRIA. 4 STAMENS.

Order I. MONOGYNIA. 4 Stamens. 1 Style.

2510. 237*a*. *Conospérmum*. Cal. ringent; Upper lip 2-lobed. Nut pappose, inversely cone-shaped.
2511. 237*b*. *Botrýceras*. Cal. 4-parted. Cor. 4-petaled. Style arcuate. Nut subulate.
2512. 238*a*. *Anadènia*. Calyx nearly regular. Gland 0. Follicle 1-seeded.
2513. 238*b*. *Agástachys*. Calyx regular. Filaments distinct. Stigma lateral. Ovary 1-seeded.
2514. 295*a*. *Lipóstoma*. Limb of cal. 4-parted. Cor. tubular at base, and ventricose at throat, bearded inside. Stam. inserted in throat. Style capillary. Stigm. 2, subulate, hispid. Caps. globose, 2-celled, opercul., many-seeded, often 1-celled. Seeds small, angular, scabrous.
2515. 306*a*. *Benthàmia*. Flowers disposed in heads. Invol. of 4 petal-like parts. Cal. 4-toothed. Petals 4, fleshy. Fruit constituted of many pomes grown together. Endocarp 2-celled. Seeds solit. and pendul. in each cell.

[membran. deciduous
16715 Lvs. oblong-ovate abrupt acumin. Flws. mostly in pairs on short pedun. Brac. broad-ellip. concave rounded

16716 Stemless, Lvs. elliptic blotched above, beneath purplish

16717 Leaves oblong costately veined glaucous beneath, Heads sessile many-flowered
16718 Leaves distich. spread. horizont. oblong apicul. lucid little undul. short. th. petioles, Heads termin. obl. Brac. obtuse undul. loose short. th. flws.

16719 Leaves oblong-lanceolate acuminate, Scape erect rigid terete

16720 Leaves acuminate 2-in. broad, Bracteas ciliated 1-flowered

16721 Leaves few oblong-acute, Spike capitate, Bracteas of a fine deep rose-red colour margined with a white line

[flat very spread., Segms. obov. obtuse
16722 Stemless, Lvs. suborbicul. acute variег. above, Flws. few radic. fascic. erect sess. Outer limb shorter, Inner
16723 Lvs. oblong dimidiato-cordate petiolate, Spike termin. Outer bract or spatha elegantly nerved transv. striped

and Miscellaneous Particulars.

public a figure and description, however imperfect, of one of the noblest plants that has graced the pages of the *Bot. Mag.*"

CLASS II. — DIANDRIA.

MONOGYNIA.

16724 Leaves elliptic-oblong tapering to base taper-pointed with serrated edges

[base
16725 Lvs. oblong approach. ovate coriac. glossy waved acumin. Panic. term. Cal. with 4 minute imbric. bract. at

[Twigs purple
16726 Lvs. elipt.-lanceol. attenuated both extrem. white and veined below wrinkled, Branches very slightly wart.

[obtuse
16727 Lvs. altern. pinnate, Leafl. 7 ovato-lanceo. or oblong acumin. Pedun. elongate. 1-flwd. Segm. of cor. 5-6

[long-acumin.
16728 Pedic. erect, Tube of cor. much longer than cal. Lower lip middle segm. bicornute lateral linear, Upper lip
16729 Tube of cor. equal in length to cal. Lat. segm. equal in length to the middle which is bifid, Upper lip ov.-acum.
16730 Lateral segm. of lower lip shorter than middle one which is sagittate, Upper segm. rhomboid-oblong retuse

16731 Spikes terminal, Bract. rounded convex entire veined, Tube of cor. a little swollen upwards
16732 Pedun. axill. & term. often prolif. sometimes wanting, Bract. constituting dbl. invol. Tube of cor. very long curved remark. twisted

History, Use, Propagation, Culture,

51. *Calceolària.* The varieties and hybrids of this genus, which have been raised in different parts of the country, are almost innumerable, and some of them are of very great beauty. They are all of the easiest culture, and require very little heat. Most of them continue flowering several weeks, and some of them the greater part of the summer.

16733 Bran. swoll. at joints, Lvs ovate.-acum. obsc. serr. Flws. in short axil. 2-3-flwd. racem. erect, Bract. 4-5 base each fl. lin.-fil. [Brac. and cal. segms. subul. short. th. cor.
16734 Stem joints short tumid in middle, Lvs. obl.-lan. very acumin. wavy minutely downy, Panic. termin. crowded,
16735 Lvs. on long pet. ovate-atten. at base sharply acumin. retic. Bract. numer. outer ovate-lanceo. inner lin. Cor. very long, Up lip erect ent. low. revol. 3-toothed.
16736 Lvs. obl. atten. both extrems. acute suberenul. Racemes term. Flws. fascic. Cal. & brac. lin. thd., Cor. aptd.
16737 Lvs. ovate acumin. crenat. Panic. large termin. Flws. remotely fasciculate subsess. disposed in slender elongated racemes

16738 Spikes axill. Brac. bracteol. and leaves lanceolate, Anthers calcarate at base

16739 Lvs. subsess. obl.-lan. acumin. very entire, Brac. small, Cal. segms. obt. Tube bent, Spike termin. subsimp.

16740 Lvs. larger & broader than those of C. integrifolia. The whole plant clothed with viscid pubescence

16741 Leaves lanceolate-acumin. canescent beneath, Corymbs panicled, Pedicels elongated
16742 Leaves ovate petiolate denticulate pubesc. lower ones acute at base, Corymbs umbellate few-flowered
16743 A hybrid between C. corymbósa and C. arachnóides, with ochraceous and dirty-purple flowers

[ovate bluntish
16744 Lvs. obl.-ovate bluntish much veined & rugose, hispidly hairy, Stem erect, very hairy, Segm. of cal. broadly
16745 Lvs. rather obtuse atten. at base velvety above beneath clothed with long hairs and small scale-lk. brist. serr. Cal. peltate deeply 4-cleft
16746 Stem lvs. cordate decuss. upper ones smaller entire with few long scat. hairs on their surfaces, Calyx downy

[bellate
16747 Lvs. linear atten. at both ends lined distinct. serr. Teeth reflexed, 2-in. long 2 lines broad, Pedun. comp. um-
16748 Whole plant clothed with white wool, Lvs. ovate or oblong, Flws. corymbose, Calyxes 3-nerved
16749 Lvs. ovate acute waved nerved, Lower ones atten. at base and connate, Upper ones nearly cord. sessile, Pan. spreading
16750 Herb clothed with white cobwebbed-wool, Lvs. ligulately-oblong little toothed petioles 5-in. long, Peduncles terminal twin

16751 Stemless, Lvs. radical ovate rhomboid rosulate serrated nerved, Scapes generally 2-3-flwd. pilose
16752 Leaves ovate biserrated, Branches dependent bluntly tetragonal of a rusty purple colour
16753 Lvs. ovate-lanceol. sharply serr. pubesc. Pedun. collected into term. panic. generally 4-flwd. shorter than lvs.
16754 Stem pilose, Lower lvs. ovate-oblong obtuse petiolate, Upper ones sessile, Lower lip of cor. very large

[sess. Infl. cymose many-fld.
16755 Stem cal. & bract. beset with glandul. hairs, Stem lvs. oblong-lanceol. undul. tbd.: upper ones ent. ov. acum.
16756 Radical lvs. many: stem lvs. few: 2 lower ones subpet.: upper ones sess. Pedic. racem. 1-flwd. Caps papery.

[fulvous
16757 Rad. lvs. obov. rather spathul. obtuse uneq. thd. Stem lvs. ov. pointed alm. ent. Corymbs forked 10-30-fld. Ped.
16758 Radical lvs. ovate somewhat obtuse, Corymbs few-flowered [filif. cilthd. gland. pubes.

[revol. obsol. 3-thd.
16759 Lvs. ovate-acumin. rounded at base: lower ones serr.: upper quite ent. Lower lip much wider than upper
16760 Lvs. obl.-lanceol. narrowed at base sharply & remotely toothed, Bract. ciliated often purplish or yellowish

[gland. & viscid
16761 Lvs. ovate-cord. 2-3-in long glabrous obtuse rather wavy, Flws. erect oppos. subsecund, Bract. ovate acute
16762 Lvs. cord.-ovate acumin. toothed, Whorls 6-flwd. Bract. decid. very large broadly ovate, nerved red
16763 Lvs. oval obtuse rounded or cuneated at base irreg. crenated in middle nearly glabrous, Whorls 2-flwd. Cal.
16764 Lvs. cord.-ovate crenated hoary beneath, Bract. decid. Galea villose [usually eld.

16765 An undescribed species, introduced by Lagasca.
16766 Racemes branched, Flowers fewer & smaller than those of *S. phlomóides*
16767 Lvs. ovate acum. crenate-sinuate: upperm. ent. Fls. in dist. about 6-flwd. whorls each wh. supported by 2 ov.-acum. awned concave streaked bracts
16768 Lvs. petiol. broadly ov. acute subcord. at base, Rac. loose verticill. few-flwd. Upper lip of cor. entire toothed: Lower acute

16769 The only species

and Miscellaneous Particulars.

2501. *Streptocárpus.* This plant is very readily increased by seed, or by division of the root, and thrives best in a light rich soil. It is a very ornamental stove herbaceous plant, and well deserving of cultivation.

16772 Invol. 4-lvd. Leafl. roundish-ovate, Lvs. obl. lanceol. & linear, Head before expand. subglobose apiculated
16773 Invol. 4-lvd. Leafl. ovate with membran. margin about equal in length to the head, Cor. hairy, Lvs. lanceolate
16774 No distinct invol. Lvs. linear-lanceol. hairy 3-nerved, Flws. in globose heads, Perianth extern. hairy, Tube very long and slender
16775 Invol. 6-7-lvd. Lvs. lanceol. acute dotted above, Tube of cor. long slender glabrous slightly dilated upwards
16776 Leaves lanceol. acute smooth on both sides, Heads many-flwd. termin. Perianth smooth, Tube infundib.
16777 Leaves oblong-obtuse, Floral lvs. oval, Calyx silky, Stem erect simple
16778 Leaves subrotund obtuse revolute beneath as well as the calyx clothed with hoary tomentum
16779 Lvs. decussate ovate acute nearly sess. horiz. or reflex. slightly downy above densely silky beneath, Per. ext. silky, Tube contracted upw.
16780 Invol. 8-lvd. 4 innerm. often smaller, Lvs. distant on very short thick pet. ellipt.-obl. oft. narrower acute very smth. Flws. numer. polygam.

CLASS III. — TRIANDRIA.

MONOGYNIA.

16781 Radic. leaves obov. or spathul. Stem lvs. broadly ovate sess. subdecut. Flor. ones lin. oblong. Flws. monœcious, Whorls cymose 2-parted: male flwa. largest.

16782 Radic. leaves ovate acute, Stem leaves linear-lanceolate

History, Use, Propagation, Culture.

105. *Gladiolus.* Some valuable additions have been lately made to this beautiful genus, of which the most splendid is unquestionably *G. natalénsis*, which is also very hardy, and of as easy propagation and culture as the *G. communis*.

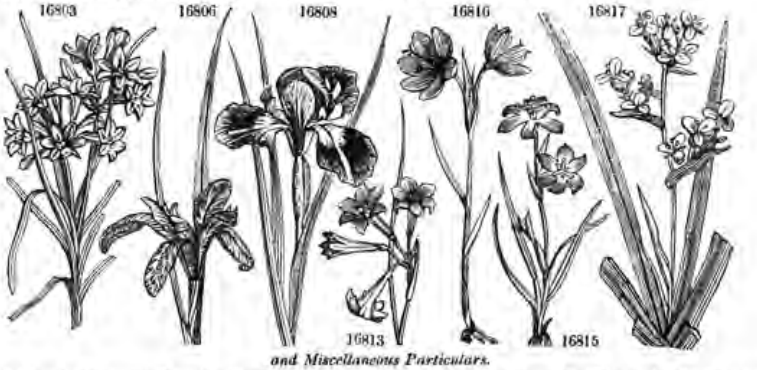
16790 Lvs. 3-nerved, Scape few-flwd. Segments of cor. ringent even somewhat transparent
16791 Lvs. very narrow, Scape 2-flwd. Tube equal to the spathe, Segments lanceolate obtuse
16792 Lvs. linear ensif. ribbed slightly glaucous, Tube scarcely equal to the spathe [hollow
16793 Lvs. narrowly linear elong. straight rigid promin. 2-nerved, Lower segm. of fl. obovately ovate spoon-shaped
16794 Lvs. broadly ensif. acumin. ribbed, Spike distich. about 10-flwd. Tube shorter than outer spathe, Segm. ovate-oblong recurved and wavy
16795 Leaves ensif. bicostate obscured nerved, Spikes term. 10-12-flwd. Sheath dbl. convolute, Tube ½ length of fl. campan. spreading
16796 Lvs. 8-9 green nerved acute twisted

16797 Nearly allied to *A. juncea*, but differs in having longer tube to flower, greater irregularity of limb and form of spots at base of 3 anterior segments

16798 Scape simple erect, Lvs. ensif. linear acute smooth nerved, Flowers distichous

16799 Lvs. equal linear ensif. Scape round branch at top
16800 Lvs. distichous ensif. spirally twisted, Scape branched compressed leafy many-flowered

16801 Lvs. linear glaucous, Limb laciniate lanceolate, Stamens sterile subulate obtuse



16802 Lvs. ovate-lanceolate, Limb linear-lanceolate
16803 Lvs. linear glaucous, Scape longer, Involucrum with pedicels twice as short, Umbel many-flwd.
16804 Lvs. linear, Involucrum sheathed: at top bifid, Peduncle filiform shorter

16805 Crested, Scape 2-flowered, Leaves falcate shorter, Spathe 2-leaved

[12 furrows and 12 obtuse angles
16806 Scape nearly round ltl. flatt. twist. about 3-flwd. Spathe 3-bracts: outer nearly 1 ft. long very narr. atten. Germ.
16807 Sheath radical long surrounding the leaves, Lvs. very long thick quadrangular striated very glaucous
16808 Lvs. in tufts rigid erect linear-ensif. tough, Stem angul. leafy, Ovar. on long stalks not enclosed in flor. leaves somewh. 3-cornered, Stigm. 2-lbd. short
16809 Stem 3-4-flwd. Lvs. linear-ensif. striat. acumin. slightly falcate, Peduncle shorter than foliaceous spathe

[mucron. Caps. pear-sh. pubes.
16810 Lvs. linear-ensif. striat. Peduncs. 4-5 in. long, Pedic. 1½ in. long also very slender, Pet. 6 oblong-spathul. retuse
16811 Foliage minutely hairy, Scape erect longer than lvs. somet. divided bearing mostly 3 fascicles of flws. Flws. with little heart-sh. spot at base
16812 Pedun. solit. or 2-4, Spathe diphyl. Bract. scariose convolute, Col. of fl. long densely covered with longish gland. yellow hairs [sever. very frag. nodding
16813 Lvs. very narrow glauc. subul. at apex, Spath. consist. of bract. membran. at margin lowerm. sharpest, Flws.
16814 Stem remarkably compressed, Spathe lanceol. condupl. green with broad white membr. margin. Germ. glandir.
16815 Bulb ovate, Lvs. mostly radic. dply. striat. sheathing, Spathe 2 unequal lvs. about 2-flwd. Pedun. 1-in. long curved, Ov. oblong glabrous
16816 Stem terete simple, Lvs. lanceol. veined, Spathe gener. 3-flwd. Segm. of cor. spathulate, Root bulbous

16817 Lvs. oval-oblong pointed smooth on both sides, Flowers in long racemes

and Miscellaneous Particulars.

16815. *Sisyrinchium speciosum* is a lovely species, found about Valparaiso, on sandy hills; to be brought to perfection, it requires to be planted in dry light soil, and placed in a warm sunny situation in the green-house.

History, Use, Propagation, Culture.

2514. *Lipóstoma.* The species of this genus thrive in any kind of light soil, and cuttings root readily in the same, under a hand-glass, in a little heat.

2515. *Benthámia.* A very desirable, nearly hardy shrub, which, perhaps, might be rendered hardier by grafting it

CLASS IV. — TETRANDRIA.

MONOGYNIA.

16818 Lvs. linear-lingulate: upperm. quite entire: lower ones sub-3-fid. Calyx silky, Stigma smooth
16819 Lvs. hard stiff glandul. on both sides: upper 1 or 2-trifid cune. & 1 or 2ce. twisted at base. Heads of flws. crowd.
16820 Lvs. coriaceous lanc.-lingul. or subspathul. faintly 3-nerved, Branches & perianth smooth

16821 Lvs. subulat.-filif. imbricated. Spikes shorter than the axillary peduncle
16822 Lvs. lanceol.-linear acute mucron. slightly pubescent somewhat obliquely twisted

16823 Leaves lanceolate coriaceous serrated, Panicle corymbose

16824 Lvs. pinnatifid slightly hairy, Lobes cuneiform, Follicle viscid

16825 The only species

16826 Bran. hoary slightly angul. Lvs. lin. revol. at edge with small mucro somet. 2 or 3-fid at point densely hairy ben. Cal. extern. silky

16827 Lvs. spathulato-oblong mucronate pubes. on both sides, Racemes corymb. Pedicels and calyx smooth
16828 Lvs. oblong-obovate obtuse mucron.: above pubescent: beneath very downy pale grey, Racemes recurved
16829 Lvs. pinn. segm. altern. lin.-obl. obt.: above downy with patent ferrug. hairs: below silky with adpressed hairs
16830 Lvs. pinnatif. segm. acute smooth and veiny above hoary beneath, Racemes panic. Perla. & pistil very smooth

16831 Cæspitose bearing many rooting stems, Lvs. spathul. rather hairy, Peduncle termin. 1-flwd. elongated

16832 Procumbent, Lvs. 8-9 in a whorl & are as well as stems hispid, Style clavate much exserted bifid at apex

16833 Lvs. sessile rhomb.-ovate acute very entire imbricated or spreading, Bract. few naked.

16834 Lvs. petiol. ovate-lanceol. taper. into petioles firm much acuminated rather revol., Stip. white glandul. downy setosely jagged, Panic. loose at ends of bran.

16835 Plant hairy, Lvs. roundish undulated spreading

16836 Lvs. cordate-acumin. shining on both sides, Bract. connate, Pedun. axill. 1-flwd. Tube clavato-funn.-shaped

16837 Petiol. numer. filiform dichot. sparingly hairy more abund. at swollen joints, Petals flat
16838 Lvs. tritern. leafl. cord.-ovate petiol. hairy, Rac. many-flwd. Sep. lin. obt. Petals ov.-lanc. inner ones spurred twice long. th. outer ones
16839 Lvs. tritern. leafl. ovate-oblong petiol. smooth

16840 The only species

and Miscellaneous Particulars.

on *Cornus sanguinea*. It is readily propagated, either by seeds or by cuttings. The fruit, when ripe, somewhat resembles that of the arbutus, but is much larger. The flesh is yellowish white, rather insipid, but not unpleasant, although a little bitter; and, as Mr. Royle informs us, it is eaten by the inhabitants of the hills in the Himalayas.

Page 108. Class V. — PENTANDRIA. 5 Stamens.

Order 1. MONOGYNIA. 5 Stamens. 1 Style.

2516. 349*a*. *Douglásia*. Caps. cartilaginous, 1-celled, 5-valved. Cor. infundibuliform; tube ventricose; limb flat, 5-parted. Stigma a minute depressed cup. Seeds 2, peltate oblong, convex on outside, concave on inside.
2517. 369*a*. *Collómia*. Cal. campanulate, 5-cleft. Cor. salver-sh., tube slender. Stam. inserted towards middle of tube. Cells of caps. 1-2-seeded.
2518. 373*a*. *Eútoca*. Cor. deciduous. Ovar. pilose. Placentas linear, 4, or many, ovulate. Caps. half 2-celled.
2519. 381*a*. *Nierembérgia*. Cor. with long slender tube and equal dilated limb. Stam. exserted; filamen. combined at base. Stigm. transverse or peltate.
2520. 381*b*. Petúnia. Cor. with short tube and dilated rather uneq.-limb. Stam. unequal, enclosed.
2521. 384*a*. *Pharbítis*. Ovarium 3-celled; cells 3-seeded.
2522. 388*a*. *Gília*. Cal. campanul., 5-cleft. Cor. funnel-sh or subcampan. Stamens inserted in throat. Cells of caps. many-seeded.
2523. 388*b*. *Ægóchloa*. Cal. tubularly campanulate, 5-cleft. Cor. somewhat salver-shaped. Stams. inserted in the upper part of tube. Cells of caps. many-seeded.
2524. 388*c*. *Linánthus*. Cal. tubular, with 5 strong green nerves, terminating in subul. recurv. teeth at apex. Cor. funnel-sh. Anthers filiform, hardly sagittate at base.
2525. 388*d*. *Hugélia*. Cal. tubul. campanul. Cor. funnel-sh. Tube short, exserted. Stam. inserted at throat. Anthers linear sagittate.
2526. 388*e*. *Leptosíphon*. Cal. tubul. campan.; lobes linear, subulate. Cor. funnel-sh.; tube very long, slender; limb campanul., 5-cleft, with oval very entire lobes. Stams. inserted at throat. Cells of caps. many-seeded.
2527. 388*f*. *Fénzlia*. Cal. tubul. campanul., deeply 5-cleft, with membranous sinuses and linear acutish erect segms. Cor. somewh. funnel-sh.; tube short; limb 5-parted. Anthers ovate-sagittate, a little exserted.
2528. 394*a*. *Mélichrus*. Cal. many-bracteate. Cor. rotate or urceolate, furnished with 5 fascicles of glands near the base inside; segments half-bearded.
2529. 399*a*. *Sphenótoma*. Cal. bibracteate. Cor. salver-sh., with slender tube, coarctate throat, and blunt beardless limb. Stam. epipetalous. Hypogynous scales 5. Placent. hanging from top of central column.
2530. 399*b*. *Trochocárpa*. Cal. bibracteate. Cor. campanul.; limb spreading, bearded. Stam. exserted. Ovarium 10-celled. Drupe baccate.
2531. 400*a*. *Ponceléta*. Cal. foliaceous. Cor. short, campanul., 5-cleft, bearded. Stam. hypogynous. Anther peltate below middle, with marginate dissepiment. Hypogynous scales 0. Placentas adnate to central column.
2532. 400*b*. *Cosmélia*. Cal. foliaceous. Cor. tubular. Stam. epipetalous, adnate to ciliated tops of filaments. Hypogynous scales 5. Placentas adnate to central column.
2533. 413*a*. *Pachypódium*. Stam. enclosed. Anthers nearly sess., adhering. ? Hypogynous scales 0. Cor. salver-sh., with equal, obtuse segments. Follicles ovate.
2534. 424*a*. *Nycterísition*. Cal. and cor. 5-parted. Stam. 5, all fertile. Ovarium 5-celled; cells 1-seeded. Stigma obtuse, almost entire. Seeds bony, albuminous.
2535. 462*a*. *Wahlenbérgia*. Cor 3-5-lobed at apex, rarely divided to middle. Stam. 3-5, free; filaments rather broadest at base. Style enclosed, pilose, most so towards upper part. Stigmas 2-5. Ovar. combined with tube of cal. Caps. 3-5-celled, each opening by so many valves at apex, which bear each a dissepiment in middle. Seeds very numer. minute.
2536. 464*x*. *Prátia*. Limb of cal. 5-toothed. Cor. cleft on back, even to base; limb 5-parted, unilabiate. Stam. combined above. Anthers cohering; two lower ones mucronate. Stigma 2-lobed. Caps. baccate, crowned.
2537. 464*y*. Túpa. Cal. spherical, 5-parted. Cor. cleft on back almost to base; limb divided into 5 segms., which are all united at their tips. Stams. combined almost to base; anthers cohering, bearded. Stigma 2-lobed, protruding. Caps. 2-celled, many-seeded.

2538. 464*a*. *Siphocámpylos*. Limb of cal. 5-parted. Tube of cor. curved, undivided, ventricose in middle; limb 5-parted, bilabiate. Stams. and anthers combined; anth. bearded. Caps. 2-celled, 2-valved, dehiscent.
2539. 467*a*. *Lechenaultia*. Calyx superior. Cor. with tube on upper side. Anth. at first cohering. Stigma obsolete, bilabiate in bottom of indusium. Caps. prismatic, 2-celled, 4-valved. Seed cubical or nucamentaceous.
2540. 470*a*. *Brunsonia*. Heads involucrate. Cal. 5-fid, 4-bracted. Cor. monopetalous, infundibuliform; limb 5-parted. Stam. 5, hypogynous. Anth. connate. Ovar. 1-seeded. Seed exalbuminous.
2541. 478*a*. *Leycestèria*. Cal. with an ovate tube, and 5-parted irregular limb, ciliated with glands. Cor. funnel-sh., tube gibbose at base, limb 5-parted and campanulate. Stigma capitate. Berry roundish, 5-celled, crowned by calyx; cells many-seeded.
2542. 491*a*. Lucúlia. Calyx 5-parted, segms. foliaceous. Cor. tubular; limb 5-lobed, imbricate in æstivation. Stigma bipartite. Caps. 2-celled. Seed samaroid, surrounded by jagged membranous margin.
2543. 496*a*. *Uncária*. Cal. tubularly urceolate, 5-cleft. Caps. pedicellate, clavate, attenuate at base. Flws. less crowded than in Naucléa.
2544. 509*a*. *Collétia*. Calyx campanulate, coloured. Petals 0. Anth. 1-2-celled, reniform or ovate. Disk cup-sh. Style simple, elongated. Fruit dehiscent, containing 3 nuts.
2545. 509*b*. Retanilla. Calyx urceolate, 5-cleft. Petals cucullate, sessile. Stam. enclosed. Anth. reniform, 1-celled. Disk covering bottom of calyx. Style simple. Fruit containing a 3-celled nut.
2546. 509*c*. *Trevóa*. Cal. turbinate, 5-cleft. Petals cucullate. Stamens enclosed. Anthers 1-celled, reniform. Disk almost wanting. Style long, hairy. Caps. membranous, 2-valved, 1-seeded.
2547. 518*a*. *Coleonéma*. Cal. 5-parted. Disk adnate to base of cal. with 5-lobed margin. Petals 5, with spreading border. Anth. terminated by minute sessile gland. Caps. of 5 horned carpels.
2548. 529*a*. *Escallónia*. Tube of the calyx semiglobose, adnate to ovarium; limb 5-toothed or 5-lobed. Petals 5, arising from calyx. Stam. 5. Anthers ovate-oblong. Stigma peltate. Style filiform, permanent. Caps. baccate. Seeds numerous.
2549. 540*a*. *Erpétion*. In every respect the same as *Viola*, but the sepals are hardly drawn out at base, and the lower petal is not drawn out into a spur; but furnished with a small gibbosity. Anth. without appendages.
2550. 241*a*. *Hymenanthèra*. Sepals imbricate. Petals at length reflexed. Structure of stams. as in *Viola*, but joined at base into monadelphous disk, with a scale at back of each. Caps. rather baccate, 2-celled; cells 1-seeded.
2551. 565*a*. *Oplothèca*. Cal. semi-5-fid, bibracteate. Cor. 0. Nectar. tubular. 5-toothed. Anth. 5, sessile at mouth of tube of nectarium, and alternate with its teeth. Utriculus 1-seeded. Style undivided. Stigma capitate.

Order 2. DIGYNIA. 5 Stamens. 2 Styles.

2552. 578*a*. *Harrisónia*. Cor. urceolate, 5-toothed, throat naked. Crown of stam. of 5 pieces, each with a fleshy process or tooth.
2553. 578*b*. *Tweédia*. Calyx 5-parted. Corolla campanulate. Corona simple of 5 retuse exserted pieces opposite the petals. Pollen masses ventricose. Stigma acuminated bipartite. Gynostegium none.
2554. 579*a*. *Philibértia*. Corona double; outer one annular, entire, fleshy, undulated; inner one inserted on the top of the gynostegium of 5 entire fleshy segments. Cor. urceolate, sinuately 5-lobed, furnished with small teeth between the segments.
2555. 590*a*. *Physánthus*. Cor. tubular. Tube inflato-ventricose; limb 5-fid, connivent.
2556. 592*a*. *Tylóphora*. Corona simple, 5-lvd.; leaflets depressed, fleshy, toothless inside, pressed to the gynostegium. Pollen masses transverse or ascending. Cor. rotate.

Order 3. TRIGYNIA. 3 Stamens. 3 Styles.

2557. 684*a*. *Stackhousia*. Calyx 5-parted. Petals 5, joined by the claws. Stamens unequal, alternating with the petals. Stigma acute, simple. Capsule tricoccous.

Nos. 2240, 2244, and 2245, in p. 134, are referable to this genus.

History, Use, Propagation, Culture,

2518. *Eutoca.* A genus of showy hardy annuals. They succeed best on rockwork, in dry, sandy, or gravelly soil.

2519. *Nierembérgia.* All the species are exceedingly elegant when in blossom. In the open border they succeed well from May to Sep., and in large patches have a very pleasing appearance. In the autumn it is necessary to pot a

16878 Lvs. lanceol. linear; upper one ovate lanceol. entire or deeply 2-4-toothed at apex

16879 Lvs. obl. lanceol. entire shining ciliat. with glands, Cal. villous glandul. Cor. ventricose
16880 Lvs. ovate-lanceol. quite entire opaque uniform 2 upper ones downy beneath
16881 Lvs. pinnate, Leafl. linear entire, Cal. deeply 5-cleft, Stamens enclosed
16882 Procumb., Lvs. deeply pinnatif. almost pinnate, Segms. oblong linear entire or slightly cut, Cal. nearly 5-part.
16883 Lvs. lanceol.-oblong obtuse, Cal. clothed with black glands, Segments long, subulate

16884 Lvs. pinnate, Leafl. ovate-roundish mucronulate, Segms. of corolla obtuse crenulated
16885 Lvs. pinnate, Leafl. ovate-obtuse glabrous, Segments of corolla ovate acutish

[lateral and term. Rac. corymb.
16886 Lvs. pinnate, Leafl. altern. very uneq. obl.-ovate some sess. others petiol. pinnatif. lobed & cut pubes. Pedunc.
16887 Lvs. bipinnatifid, Leafl. oblong dentately pinnatifid, Cal. segments oblong-linear hispid
16888 Stem slender branching, Calyx linear 5-cleft, Corolla spreading 5 ovate obtuse lobes

16889 Lvs. pinnatifid or bipinnatifid, Ovula 20 or more to each placenta
16890 Lvs. linear or lanceol. quite entire sometimes trifid or bipinnatif. Placenta 20 or many ovulate

[several abortive
16891 Lvs. silky on both sides pinnatif.: upper leaves linear entire, Stam. 3 times as long as cor. Plac. many-ovul.
16892 Stem dichotomously divaricate, Leaves all ovate undivided, Placent. 12-20-ovulate
16893 Lvs. ovate acute quite entire, Cor. about twice as long as calyx, Placenta 8-10-ovulate
16894 Herb clothed with clammy pili, Lvs. cordate ovate rather angul. serrat. Racemes elongated forked and simple

16895 Lvs. sinuately lobed sub-tomentose as well as petiol. and bran. Points of corolla elongated, Calyx 2-3-lobed

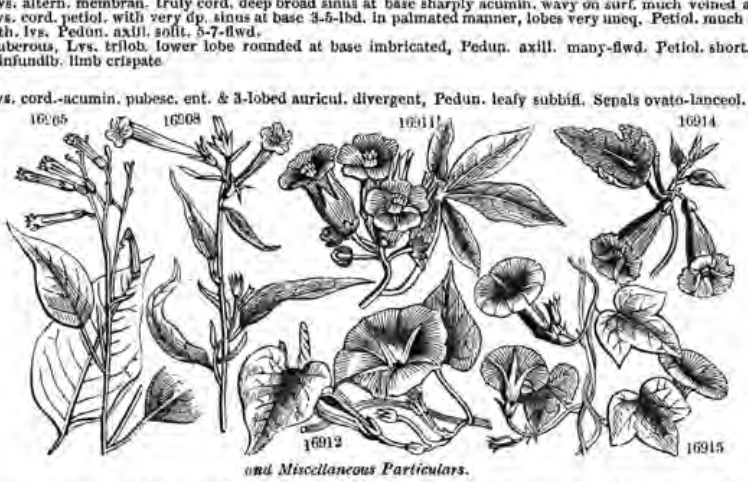
[of pedun. Cal. dply. 5-partite
16896 Glabr. & glauc. Lvs. oppos. & connate ovate or ov.-obl. 3-5-nrvd. very acute passing into subul. bracts, at base

[segms. obov. 3-nerved
16897 Herb clothed with glandul. pubesc. Lvs. oppos. & altern. roundish-obov. petiol. Cal. large campan. foliaceous
16898 Herb downy, Lvs. linear subspathul. obtuse, Cal. segms. linear bluntish much short. than tube of corolla
16899 Herb glabrous erect filiform, Lvs. lin.-lanceol. acute or obtuse, Tube of cor. glandul. as are the filaments
16900 Herb smoothish, Lvs. linear acumin., Cal. segms. acumin. much shorter than tube of cor.

[times long. than cal.
16901 Lower lvs. altern. ovate-oblong obt. pubesc. attenuated, Floral lvs. sess. cord.-ovate oppos. Tube of cor. 3-4
16902 Lvs. linear obt. Cor. funnel-sh. tube scarcely longer than cal. Segms. emarginate, Style clavate

16903 Lvs. ovate on short petioles acute, Cor. ventricose, Segms. ovate acute, Flws. axillary solitary pedunculate

[twice as long as cal.
16904 A hybrid between P. nyctaginiflòra & P. intermèdia, with ovate acutish lvs. Cal. segms. ligulate, & tube of cor.



[cup-shaped
16905 Arboreous, Lvs. uneq. cord.-ovate naked on long petiol. Tube of cor. slightly curv. mouth contract. limb small
16906 Lvs. stem-clasping cord.-lanc. acumin. Tube of cor. long filif. 5 times longer than follac. cal. Lobes of cor. ovate-lanc. acute

[Seg. ov. obt. emar. somew. uneq.
16907 Root lvs. obl. spathul. stem lvs. sess. half-stem-clasp. acumin. hardly repand. Cor. salver-sh. Tube long clav.
16908 Lvs. broad-lanc. acumin. undul. on longish petiol. Panic. few-flwd. Tube of cor. elong. Segms. roundish obt.
16909 Lvs. fleshy ov.-lan., lower petiol. Flws. axill. solit. Cal. many parted, Caps. many-celled, Segms. of cor. obt. deeply veined

[thickened
16910 Lvs. cord. roundish 3-lbd. Lobes acute, Pedun. many-flwd. longer than petioles, Cor. campanulate, Tube
16911 Lvs. quinately digit. leafl. lanc. quite ent. margins undulat. Pedun. as long as petiol. Inflor. cymose, Sep. imbric. obt. eq. Cor. funnel-sh.

[to petiol. Pedun. axil. 3-4-flowered somewh. racem
16912 Lvs. altern. membran. truly cord. deep broad sinus at base sharply acumin. wavy on surf. much veined ab. eq.
16913 Lvs. cord. petiol. with very dp. sinus at base 3-5-lbd. in palmated manner, lobes very uneq. Petiol. much short. th. lvs. Pedun. axill. solit. 5-7-flwd.
16914 Tuberous, Lvs. trilob. lower lobe rounded at base imbricated, Pedun. axill. many-flwd. Petiol. short. Cor. infundib. limb crispate

16915 Lvs. cord.-acumin. pubesc. ent. & 3-lobed auricul. divergent, Pedun. leafy subbifl. Sepals ovato-lanceol. acu e

and Miscellaneous Particulars.

few plants of each species, and preserve them in the green-house through the winter. They seldom ripen their seeds, but are all readily propagated by cuttings, and thrive best in light rich soil.

2520. Petùnia. Culture, propagation, &c., same as that of Nierembèrgia.

2521. Pharbitis. A genus of very showy, tender, twining annuals. They thrive best in light rich soil, or a mixture of loam and decayed leaves.

386. NEMO'PHILA. Sp. 5—5.

History, Use, Propagation, Culture,

2522. *Gília*. Elegant hardy annuals of the easiest culture, the seeds requiring only to be sown in the open border in spring. The larger the quantity of each grown together, the more showy their appearance.

2523. *Ægóchloa*. A genus of singular, but by no means showy, plants, requiring the same treatment as those of Gília.

2524. *Linánthus*. Culture, propagation, &c., the same as those of Gília.

16916 Lvs. pinnatif. lobes few broad little-toothed, Cor. scarcely longer than calyx, Placentas 2-ovulate
†2294 Nearly related to N. parviflora, but differs in flws. being twice the size & calycine append. being larger & longer
16917 Petioles auriculately dilat. at base, Cor. twice as long as cal. Lvs. while oppos. connate at base
16918 Lvs. 3-4-lbd. on each side entire or cut, Petiol. without append. Cor. twice as long as cal. Placent. 10-12-ovul.
16919 Lvs. oppos. pinnatif. lobes 5-9 alm. ent. Cor. rotate very pilose bottom & obov. segms. Placent. about 10-ovul. Seed strophiolate smooth

16920 Corolla 3 times longer than the calyx
16921 Corolla twice longer than cal. Flws. one half smaller than those of G. *finifloŕa*
16922 Corolla hardly exceeding the calyx, Habit of *Arenaria tenuifolia*

[or ovate flat
†2300 Lvs. pectin.-pinn. Leafl. linear acumin. Tube of cor. 5 times longer than cal. Limb spread. Segms. acute obl.
[acumin. channelled
16923 Lvs. pectin.-pinn. clthd. cobwebbed villi as are bract., Leafl. or segms. lin. mucron. Segms. of limb ov.-lanc.

16924 Lvs. glabr. bipinn. Flws. usually solit. Corymbs loose on long pedunc. Cor. 4 times longer than calyx
16925 Lvs. pinnatif. Lobes ovate, Flws. somewhat glomer. Cor. 3 times longer than the cal.
16926 Lvs. pinnatif. rather woolly at length glabr. Segm. oblong lanc. ent. or cut, Flws. nearly solit. divaric. panic. Cor. twice long. than cal.

†2301 Lvs. pinnatif. lower ones bipinnate, Segms. linear, Flws. solit. term. panic. Cor. about twice length of calyx

16927 Lvs. bipinnate, Leafl. or segms. linear subul. Corymbs 3-6-flwd. virgately panic. Corolla about 3 times longer than calyx.
[Cal. segms. subul.
16928 Lvs. pinnatif. Segms. narrow obl. sinnat., Pedun. axill. solit. 1-3-flwd. Cor. tubular hardly long. than cal.
16929 Lvs. somewh. bipinnate smoothish, Segms. linear, Corymbs 3-10-flwd. Pedun. very long, Cor. hardly twice longer than cal.
[than cor.
16930 Lvs. 2 or 3-pinn. Segms. or leafl. linear subul. Cal. rather woolly, Cor. twice longer than cal. Stam. shorter
16931 Lvs. bipinnatif. Segms. linear cut, Flws. sess. dispersed in dense heads, Cor. longer than cal. Stam. shorter than cor.

16932 Lvs. pinnate, Leafl. ent. or cut lobes lanc. lin. very acute spinose, Cal. segms. lanceol. Flws. glomerate termin.

16933 Lvs. opposite sessile palmate, with 3 to 5 linear-subulate segments

16934 Lvs. numerous nearly all pinnatif. glabr. Tube of cor. longer than cal. Stam. about equal in length to cor.
16935 Lvs. short simple or furnished with 1-2-segm. on each side tomen. Tube of cor. exserted, Stam. exceeding cor.
16936 Lvs. elongated simple or pinnatif. clothed with loose white wool, Tube of cor. longer than cal. Stam shorter than cor.
16937 Lvs. lower elongated simple glabr. upper short pinnatif. woolly, Tube of cor. shorter than cal. Stam equal to cor.

16938 Lvs. 7-11-cleft, Segms. subul. straight margins revolute, Tube of cor. hardly twice longer than limb, Filam. very short
16939 Lvs. 5-7-cleft, Segms. oblong-linear, Tube of cor. 2 or 3 times longer than limb, Stam. 3 times shorter than limb of cor.
16940 Lvs. ditto, Tube of cor. about 4 times longer than limb, Style scarcely equal to corolla

16941 Lvs. ditto, Tube of cor. 4 times longer than limb, Stams. hardly ½ shorter than limb of cor. Style little exserted
16942 Lvs. 9-11-cleft, Segms. subul. erect margins revolute, Tube of corolla shorter than limb

16943 Herb nearly simple glabr. or downy, Lvs. oppos. lin. ent. Flws. 1-3 together pedunculate, Cor. nearly 1 in. long

and Miscellaneous Particulars.

2525. *Hugélia.* Culture, propagation, &c., the same as those of *Gilia*.
2526. *Leptosiphon.* All the species of this genus are very pretty showy plants, and are well worth cultivating in every garden. Culture, &c., of *Gilia*.
2527. *Fénzlia.* Culture and propagation the same as those of Leptosiphon.

History, Use, Propagation, Culture,

2535. *Wahlenbérgia.* The seeds of the annual sp. of this genus require to be raised on a hot-bed; and, when sufficiently strong, planted into the open border, in a sheltered situation. The perennial sp. grow freely in loam, peat, and sand, and strike root readily under a hand-glass.

2536. *Prâtia.* Plants of this genus are readily increased by division of the root, or by seed; and thrive best in a mixture of loam, peat, and sand.

2537. *Tùpa.* The species of this genus are deserving cultivation in every collection, on account of the beauty and singularity of their flowers. They are generally raised from imported seeds; and, when the plants are sufficiently strong, may be planted in the border under a south wall, but require to be potted in the autumn, and placed in the green-house during winter. *T. Feuillèi* yields a dangerous poison in Chile.

16975 Lvs. ovate-lanc. short-acumin. scabrous on both surfaces rounded at base, Cal. segms. linear villous

16976 Lvs. scarcely petiolate ovate or subcordate scabrous above and on the nerves beneath, Corymbs terminal

16977 Stem creeping

[Cor. rotate
16978 Stems diffused, Lvs. reniform-cordate deeply serrated, Peduncle usually 2-flwd. Segms. of calyx toothed,

16979 Glabrous, Stems branched, lower lvs. roundish ; upper ones linear spatulate deeply serrated, Pedunc. corym.
16980 Stems filif. creeping hairy, Lvs. roundish-cord. serr. petiol. hairy both surfs. oblique at base, Pedic. solit. Cal. segms. lin. subul.

16981 Lvs. lanceolate cuspidate, doubly serrated, decurrent at the base, Bracts convolute, Calyx toothed subulate, Anthers glabrous
16982 Stem erect thick suffrut. at base simple leafy, Lvs. ov.-lanc. sess. decurrent clothed sof. whitish down, Raceme term. spicate
16983 Glabrous, Lvs. lanceolate serrulated, Flowers racemose, Calyx spherical 5-toothed
16984 Stem suffrut. simple glabr. Lvs. lin.-lanc. serrul. quite glabr. both surfs. Pedic. axill. shorter than lvs.
16985 Stem villous, Lvs. sess. ovate-oblong serrul. mucron. downy glauc. Raceme short leafy, Cor. downy

16999 Spikes approx. vertic. heads of nearly sess. flws. Tube of cor. hairy ventric. in middle, Lvs. coriac. retic. ov. on short ped. glauc. ben. ciliat.
17000 Glabrous, Lvs. petiol. obl.-lanc. shining above pale ben. Pedun. short 2-flwd. Tube of cor. very long filiform
17001 Hispid-pilose, Umbels pedunculate, Lvs. petiolate cordate ovate obtuse underneath glaucous

17002 The only species

and Miscellaneous Particulars.

2538. *Siphocámpylos.* The sp. of this genus have all large, showy, scarlet, or red flowers, and well deserve a place in every stove. They are of easy culture. A mixture of loam, sand, and peat soil suits them best; in which cuttings strike readily under a hand-glass in heat.

2539. *Lechenaúltia.* Elegant plants when in blossom. A mixture of turfy loam, peat, and sand suits them best; and cuttings of the young wood root freely in the same kind of soil under a hand-glass.

2540. *Brunónia.* Culture and propagation as for Scævola in p. 169.

2541. *Leycestéria.* This is a beautiful shrub when in a flowering state, from the contrast between the deep green hue of its stem and lvs. and the reddish purple of its large bracteas and berries. It is easily propagated by cuttings, or by seeds, which it produces in abundance.

History, Use, Propagation, Culture,

2542. Luculia *gratissima*. It is impossible to conceive any thing more beautiful than this tree, when covered with its numerous cymes of fragrant flowers. A good rich light soil suits it best; and cuttings may, though with great difficulty, be rooted in sand, under a hand-glass.

2543 *Uncaria* Gambier. Gambier is the Malay name of an extract prepared from the leaves of this plant, and one of the drugs, if not the only one, formerly called *Terra Japonica* in Europe. It is chewed by the natives, mingled with betel leaf and areca, after the manner in which the cutch is used on the continent of India. (*Don's Mill.*)

2544. *Colletia*. A mixture of loam and peat appears to suit the plants of this genus best; and cuttings of the young wood will root freely in sand, under a hand-glass.

2545. Retanilla. Propagation, culture, &c., as for Colletia.

2546 *Trevoa*. For propagation, culture, &c., see Colletia.

17003 The only species.

17004 Lvs. ov-obl. acute on short pet. smooth both surfs. Stips. ovate, Pedun. axill. solit. oppos., Bracteol. in middle: lower sterile convert. int. hooked spines

17005 Branches smooth, Lvs. obliq. cord. or ellipt. 3-nerved shining, Wing of fruit entire

[as long as lvs. 3-6-flwd.

17006 Bran. terete smooth, Lvs. obov.-obl. obt. acutely serrat. tapering and ent. at base, Pedun. slender flatten. about
17007 Bran. smooth terete, Lvs. lanceol. finely serrat. Pedun. dichotom. 6-flwd. Flws. tetrandrous, Petals 4-lanceol. cordate

17008 Spines strong awl-sh., Fascicles scattered, Cal. oblong-cylindrical, Anth. nearly sess.

17009 Lvs. obcord. quite entire 3-nrvd. Flws. sess. spiked rising from axillæ of scales

17010 Lvs. 3-nerved

17011 Lvs. ovate roundish hairy

17012 Branchlets pubesc. Lvs. lin. obl. obtuse, Peduncle 1-flwd. glabrous, Petals straight bluntish
17013 Branchlets glabrous, Lvs. ovato-lanc. lower ones serrated upper ones quite entire, Cymes opposite the leaves

17014 Bran. twiggy pendent, Lvs. filif. acumin. flat above ben. semiterete, Flws. axill. solit. on short pedun. with several subul. imbric. bracts

[flwd. Cal. puberul. Petals obovate

17015 Branchl. rath. pubesc. Lvs. cuneif.-lanc. somewh. crenul. quite ent. middle nerve hairy, Panic. termin. many-
17016 Lvs. obl. cuneate at base acutish finely serrat. full of resin. dots ben. Panic. term. many-flwd. crowded intermixed with foliac. bract. Petals obov.-obl. [term. spike-formed erect, Petals obovate
17017 Hairy, Bran. somewh. trigon. Lvs. ellipt. obtuse on short petioles serrul. rather clammy above when young, Rac.
17018 Lvs. oblong hairy viscid
17019 Lvs. oval acuminate smooth on both sides [Cor. cylindrical, Limb revolute
17020 Lvs. obov.-lanceol. acute doubly serrat. glandul. at the base tapering at petiole, Pedun. simple or branched,
17021 Lvs. oblong-lanceolate serrulate clammy varnished, Corymbs 3-flwd. racemose, Corol. cylind. Limb spreading

[as long as lvs.

17022 Stem simple erect, Lvs. ovato.-obl. petiol. entire hairy, Caps. pubesc. Stip. lanceolate ent. Pedun. about twice
17023 Distinguished from *V.* odorata by its paler green herb. larger and paler flws. upper petals longer and narrower and lower broader and more distinctly emargin. Stip. also narrower
17024 Stem woody somew. angul. much bran. Lvs. cord. coriac. smooth even, Stip. and brac. fringed, Sepals lanceol
17025 Lvs. ovate acum. lbd, smth. above and slightly hairy beneath. [Pedun. erect. Caps. short. and round. th. *V.* canina

17026 Lvs. crowded renif. repandly toothed punct. Stips. lin.-awl.-sh. acumin. Petals reflex. 2 lateral ones bearded on upper side

17027 Lvs. oblong denticulated

and Miscellaneous Particulars.

2547. *Coleonèma pùlchrum.* A beautiful little shrub, which thrives in a mixture of peat and sand, with a little loam. The tops of the young shoots, made into cuttings, and planted in sand under a bell-glass, root readily without heat.

2548. *Escallònia.* The species are fine evergreen half-hardy shrubs, and thrive best in a mixture of peat, sand, and loam. Cuttings strike readily in the same kind of soil, or in sand under a hand-glass.

2549. *Erpètion.* Elegant little plants, that deserve to be cultivated in every garden. They are well adapted for rockwork, and are easily increased by separating their runners. They require the protection of a frame during winter.

2550. *Hymenanthèra.* A mixture of loam and peat suits the species of this genus best, and cuttings root readily in sand under a bell-glass.

†550. *RI'BES* L. (*Ribes* of the Arabian physicians, found to be the Rhêum *Ribes*.) *Grossulàceæ*. Sp.41—41.

History, Use, Propagation, Culture,

2557. *Stackhousia.* An interesting plant, as forming the type of a very small natural order bearing its name. See Lindl. *Nat. Syst.* ed. 2. p. 118.

Page 236. CLASS VI.—HEXANDRIA. 6 STAMENS.

Order I. MONOGYNIA. 6 Stamens. 1 Style.

2558. *Ismène.* Perianth 6-parted. Corona staminiferous, tube curved, cylindrical. Filaments short. Seeds fleshy, round. Scape solid.
2559. *Chorízia.* Perianth with a nearly straight cylindrical tube, and a spreading limb. Corona spreading. Filaments converging. Anthers versatile.
2560. *Coburghia.* Perianth drooping, with a long curved cylindrical tube, and a short half-spreading equal limb. Filaments equal. Stamens equal, connected by tubular membrane. Stigma blunt. Ovarium 3-sulcate. Scape solid.
2561. *Stenomíssa.* Flowers drooping. Perianth with a nearly straight tube, constricted in the middle, and ventricose at the apex. Limb short, regular. Corona short. Stamens straight. Capsule ovate, 3-furrowed.
2562. *Barbacénia.* Perianth funnel-shaped, 6-cleft, adnate to the ovarium. Filaments bifid. Anthers fixed to the back of the filaments in the division. Ovarium furnished with 6 rows of tubercles. Capsule 3-celled, many-seeded.
2563. *Pourrétia.* Calyx 3-parted, inferior. Corolla 3-parted, naked at base. Capsule 3-celled. Seeds naked.
2564. *Dyckia.* Calyx 3-parted. Segments concave. Corolla urceolately campanulate. Petals erect, fleshy at the base. Stamens monadelphous at the base. Ovarium tripartite. Cells many-seeded. Stigmas fringed.
2565. *Billbérgia.* Calyx 3-parted, unibracteate. Petals 3, convolute, with scales at the base. Stigmas 3, convolute. Capsule 3-celled, many-seeded.
2566. *Acis.* Perianth drooping, campanulate, 6-parted. Stigma obsoletely 3-lobed. Capsule 3-celled. Seeds fleshy angular. Spathe 2-valved.
2567. *Curcu.* Perianth tubular, 6-parted, deciduous. Segments imbricate; outer shorter than inner. Stam. equal inserted in orifice of tube. Anth. versatile. Ovarium inferior, 3-celled, many-seeded. Fruit berried indehiscent, 1-seeded from abortion. Seeds very smooth, transparent.
2568. *Pyrolírion.* Flowers sessile, funnel-shaped, erect. Segments equal, recurved at ends. Spathe bifid, equal. Stamens spreading in the throat. Ovarium 3-celled. Segments of stigma dilated. Scape 1-flowered, hollow.
2569. *Hippeástrum.* Perianth declinate, 6-parted; tube short, stamens declinate. Capsule 3-valved, 3-celled. Scape hollow, many-flowered.
2570. *Sceptránthes.* Perianth funnel-shaped, with a long cylindrical tube, 6-parted spreading limb. Capsule 3-gonal, seeds in two rows.

8 pèndula *A.B.* A.b. pl. 239. ; syn. *U.* horizontàlis rùbra *H. S.*
9 fastigiàta *Hort. Exeter* ; syn. *U.* ex- oniénsis & Fórdii Hort.
10 crispa *A.B.*

17062 Lvs. ov.-acumin. coriac. strongly veined simply cren. serr. slightly oblique & cord. at base, shining but rather scabr. ab. ; smooth ben. Bran. near sm
17063 Lvs. smooth on upper side uneq. at base doubly serrat. Flws. on droop. stalks, Stams. 6-8, Samara ellipt. dply. clav. strongly frin. with coarse dense hairs
4 incisa *H. S.*, A. b. pl. 242.
5 fòliis variegàtis *Hort.*
[Involucels 5-lvd. conform. to those of involucr.

[volucr, lvs. setaceous
17065 Stem rough from strigæ, Lvs. dply. lbd. serrat. acute scabrous above ; pubes. beneath, Umbels of 40 rays, In-
[2-lvd. Involucels short coriac. few-lvd.
17066 Stem lvs. ternate, Leafl. somewh. palmately pinnatif. toothed, Segms. acute, Umbels many-rayed, Involucra 1-
17067 Stem lvs. ternate, Leafl. pinnatifid deeply toothed, Umbels many-rayed, Stem from 10 to 12 feet high

TRIGYNIA.

[woolly
17068 Lvs. roundish oval quite ent. clthd. with stellate tomentum both surfs. grey ben. as well as bran. Corymbs term.
17069 Lvs. 3-lbd. acumin. coarsely & bluntly dent. Petiol. glandless glabr. Corymbs termin. not radiant, Fruit obl. compressed

17070 Lvs. linear-lanceolate, Spike cylindrical elongated at top acutely conical, Segments acute, Stamens unequal

PENTAGYNIA.

[longer than ovarium
17071 Glabr. erect, Lvs. lanceol. acute 3-nrvd. Flws. corymbose, Cal. lvs. ov.-lanceol. acute keeled, Styles connate
17072 Lvs. oblong lanceolate slightly hairy [racem. Brac. & sepals lanceol.-acumin.
17073 Bran. angul. Lvs. scat. linear ¾in. in length mucron. glabr. quite ent. slightly glauc. Flws. subcorymb, Fruit
[Cal.-ribs termin. about base of 5 blunt membran. segms.
17074 Lvs. spathul. 3-5-nrvd. below : coarsely reticul. above, Panic. bran. : bran. angul. in front rounded behind

and Miscellaneous Particulars.

17067 Heracléum *giganteum*, when growing on deep loamy soil, and liberally supplied with water when it is sending up its flower stalk will attain the height of 12 to 15 feet.

2571. *Hoylóckia*. Perianth cylindrical, with a widened throat and a half-spreading limb. Stamens conniving. Stigmas 3, recurved at ends. Capsules 3-gonal.
2572. *Cunningia*. Perianth campanulate, 6-cleft, deciduous, alternate. Segments ciliated. Anthers emarginate at the base, conniving. Stigma pruinose dot. Capsule 3-celled, few-seeded.
2573. *Fúnkia*. Perianth funnel-shaped, deciduous. Stamens and styles declinate. Stigma clavate, 3-gonal. Capsule 3-celled, many seeded. Seeds disposed in two rows in each cell, winged at end.
2574. *Cyclobóthra*. Flowers drooping. Sepals glabrous, petals bearded, with a nectary, hollow in the middle. Capsule 3-winged. Seeds in single rows.
2575. *Rhinopétalum*. Perianth 6-leaved, deciduous ; each leaf furnished with a naked nectariferous hollow at the base, upper one horned on the back. Filaments bearded. Ovarium 3-gonal, 3-celled, many-seeded.
2576. *Charlwoódia*. Perianth 3-parted. Filaments thickened in the middle. Stigma 3-cleft. Ovarium 3-celled.
2577. *Calliprora*. Perianth campanulate, 6-parted. Filaments petaloid, 2-lobed. Anthers sessile between the lobes. Ovarium stipitate, 3-celled, many-seeded. Stigma 3-lobed. Capsule 3-winged.
2578. *Laxmánnia*. Corolla 6-parted, persistent. Filaments subulate, smooth, inserted in the base of corolla. Anther peltate. Capsule 3-celled. Seeds sub-solitary, peltate.
2579. *Barnárdia*. Perianth 6-parted, spreading, persistent. Stamens dilated at base. Ovarium 3-celled, 3-seeded. Stigma simple.
2580. *Daubénya*. Inflorescence umbellate, sessile. Perianth tubular. Limb bilabiate. Upper lip short, 3-dentate, lower one tripartite. Ovarium 3-celled.
2581. Camássia. Perianth spreading, 6-lvd, upper leaf ascending, lower one deflexed. Stamens equal ascending. Ovarium 3-celled, many seeded. Stigma 3-toothed. Seed 6 in each cell.
2582. *Trichopétalum*. Calyx recurved. Petals bearded along the margins. Stamens equal. Stigma 3-angular. Capsule 3-celled, many-seeded. Seeds reniform.
2583. *Stypándra*. Perianth 6-parted, spreading, deciduous. Filaments curved, bearded, and swollen at top. Stigma simple. Capsule 3-celled, few-seeded.
2584. *Tricóryne*. Perianth 6-parted, spreading, deciduous. Stamens bearded. Ovarium tripartite ; lobes 2-seeded. Stigma simple. Pericarps 3, clavate, 1-seeded.
2585. *Herrèria*. Sepals 6, recurved. Style trigonal. Stigma sessile, 3-lobed, papillose. Capsule 3-winged, 3-celled, many-seeded. Seeds winged.

2586. *Geitonoplèsium*. Perianth 6-parted, spreading, deciduous. Filaments curved at apex. Anthers sagittate, conniving, longer than the filaments. Style 3-sulcate. Stigma simple. Berry few-seeded. Seeds nearly globose.

2587. *Mahònia*. Sepals 6, guarded on the outside by 3 scales. Petals 6, without glands on the inside. Stamens furnished with a tooth on each side at top of the filament. Berries 3-9-seeded.

2588. *Schrádera*. Cal. with ovate tube, and short truncate or sub-denticulated limb. Cor. funnel-sh., tube terete. Anth. 5-8 sess. lin. inserted into throat of cor., hardly exserted. Style short, bifid. Berries pea-sh., 3-4-sided, 2-4-celled. Cells many-seeded. Seeds minute.

History, Use, Propagation, Culture,

17088. *Anigozánthus Manglèsii* is a singularly beautiful plant, for which, and for a number of other plants of rarity and beauty, the public is indebted to Robert Mangles, Esq., of Whitmore Lodge, Berks.

2589. *Stephánia*. Cal. 2-lobed. Petals 4. Torus small. Ovarium stipitate, oblong.

Order 3. TRIGYNIA. 6 Stamens. 3 Styles.

2590. *Calochórtus*. Calyx 3-lvd. Petals 3, bearded inside. Stigmas petaloid. Capsule 3-valved, 3-gonal. Seeds flat, inserted by single rows.

2591. Merendèra. Perianth funnel-shaped, of 6 sepals. Petals on very long claws. Stamens inserted in the petals above the claws.

2592. *Livistònia*. Perianth double, both tripartite. Ovaria 3. Styles 3, combined. Stigma undivided. Berry 1-seeded.

MONOGYNIA.

[cron. tapering very much to base

17075 Perian. petal-lk. tube bluntly tetragon. thick, Segms. spreadg. like star quite distinct at base, cuneat.-obov. mu-
17076 Scape slender 4-flwd. Segms. perian. obov. mucronate somewhat reflexed twice as long as the cup-shaped truncate yel. corona.

17077 Corona plicate repand longer than the segms. Style longer than the corona, Leafs erect, Scape compressed.

17078 Lvs. lorately linear channelled on upper side keeled at back, Crown cylindr. curled 6-lobd. Lbs. round entire, Segms. of perian. obliq. ovate

17079 Segms. perian. ovate spreading, Corona funnel-shaped length of segms. Limb spreading deeply crenated

17080 Lvs. 9-10 in. long erect little spreadg. glauc. striat. and keeled at back upper side somewh. concave margin thickened, Segs. of perian. ov. or obov.-lanceol. cup 2¼ in. long

17081 Lvs. expanded into a wing above the base, Wing plaited

[linear-lanceol. 6, Corona spreading rotate closely toothed

17082 Lvs. 8 or 10 linear-oblong striated, Scape 2-edged 10-12-flwd. longer than lvs. Spathe lanceolate Segms of perian.
17083 Perian. yellowish marked with green, Tube slender, Limb and Style exceeding the Corona, Ovarium pedicellate

17084 Glaucous, Scape 3-flwd. Tube long green, Limb white, Corona white rotate with a jagged border

17085 Lvs. glaucous acutish, Scape compressed green, Stamens enclosed

17086 Lvs. oblong-cord. Umbel 6-flwd. Segms. of perianth obl.-lanceol. Lateral teeth of filament very much elongat. and sometimes 2-lbd.

[into cylind.-campan. limb

17087 Scape terete bearing umbel of about 7 flws. Spathe of 2 membranac. lvs. Perian. cylindric gradually widening

17088 Stem erect cithd. with short thick crimson persistent velvety down, Flws. in short termin. spiked raceme, Stigma capit. project. beyond tube

17089 Deep green, Flws. panicled, Perianth swelling towards the summit hairy, Segms. a little reflexed

17090 Lvs. linear keeled with spiny serratures, Ovarium elongated tuberculated

[straight 1-sided long. th. stam.

17091 Lvs. lanceol. very ent. acumin. glauc. and woolly ben. Pedic. shorter th. brac. quite smooth as is cal. Petals
17092 Lvs. liq.-lanceol. very entire smooth acumin. ¾ in. broad, Stem simple, Segms. of cor. revol. white, Stigma 3-fid. white

[and rachis pubes. Brac. much long. th. pedic.

17093 Raceme many-flwd. elongat. Petals oblong-lanceol. obtuse twisted to one side concave with galeat. spur, Cal.

17094 Lvs. lanceol.-linear elongated ciliato-spinulose furfuraceous beneath, Racemes panicled villous

17095 The only species

[remote, Brac. ab. eq. to flws.

17096 Lvs. lin.-ligul. ent. invol. at base, towards extrem. plane recurved acute, Spike simple, Rachis zigzag, Flws.
17097 Lvs. oblongo-lanceol. accuminated undulated recurved, Flowers aggregate sessile
17098 Lvs. ligulate acumin. furfuraceous, Spike ovate solitary scarcely higher th. lvs. Brac. ovate concave bright pink

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

9667. *Clivia.* A splendid green-house plant of easy culture, and may be propagated either by seeds or suckers.
748. *Alstrœmèria.* All the species of this genus have showy and beautiful flowers, and they may all be cultivated in

17099 Lvs. lanceol.-ensiform undulat. acumin. rather spinous, Spike pend. many flwd. Flws. solit. Brac. very entire
17100 Leaves most singularly barred at uncertain intervals with white
17101 Rad. lvs. glauc. erect recurved channelled ligul. obt. with a little point spinous serratures and cross. with white downy bands, Spike capit. prolifer.

17102 Erect lvs. cordate lanceol. Flws. in crowded spikes

17104 Floating lvs. reniform cordate acuminated, Petioles inflated, Flws. in spikes

17105 Spathe 1-flwd. Leaflets of the perianth obl. bluntish entire, Lvs. narrow linear obtuse glaucous spreading
17106 Petals entire

17107 Limb longer than the tube much shorter than the style

17108 Lvs. distichous coriac. strap-sh. sheathg. at base retuse and oblique at apex margin rough. Flws. 48—50 in pendulous umbel

17109 The only species

17110 Scape ab. 3 ft. high rounded glauc. Spathe 2 lanceol. membran. lflts. Umbel 6-flwd. scentless. Germ. obovate 3-gonous, Style short. than perianth

17111 Lvs. linear obtuse shorter than scape, Umbel 3-flwd. Flws. nearly erect funnel-sh. Pedic. round slender 2-3 inches long, Spathe 2-valved acumin.

17112 Hybrid, Scape 5½ in. high, Spathe brownish-green, Pedun. 1 in. long, Lvs. not ½ in. wide acute keeled, Style [much declined long. than filam.
17113 Lvs. ligulate channeled keeled acute red near the base, Spathe 1-lvd. cells of ovarium many seeded, Style robust
17114 Lvs. linear bluntish channeled purplish at the base, Spathe bifid, Style thick [declinate
17115 Lvs. linear blunt channeled, Spathe reddish bifid

17116 Limb of the perianth coarctate 3 times shorter than tube, [somewhat 3-lobed Lvs. glaucous shorter than scape Segms. ovate mucron. with involute margins, Capsules

17117 Lvs. narrow lying on the ground rising in autumn after the flowers

17118 Lvs. narrow obtuse, Scape 2-flwd.
17119 Lvs. narrow, Scape 4-flwd. Spathe bifid
17120 Lvs. obtuse glaucous umbel 6-flwd.
17121 Lvs. narrow, Scape 1-flwd. Spathe divided at apex

17122 Umbel 2-3-flwd. Perianth campanul. Limb 6-parted thrice longer th. tube, Throat beard. Scape very smooth [rather long. than lvs.

17123 Lvs. obl. acumin. petiol. villose above, Pedun. umbellate, Bract. loose, Segms. of cor. connivent
17124 Stem twining, Leaves obl. lanceol. acumin. many-nerved twisted at the base, Nerves pilose above, Umbel many-flwd. peduncles hispid [shorter
17125 Stem smooth, Lvs. obl. acumin. striated petiolate pubesc. ben. Umbel many flwd. Outer segments of cor.
17126 Stem erect spotted, Lvs. obl. lanceol. acute twisted at the base, Umbel many-flwd. Peduncles angular

History, Use, Propagation, Culture,

772. Tùlipa. It appears to us highly probable that the greater number, and indeed perhaps the whole, of the above names, are only varieties.

[prumose ent. Pedun. 2-flwd.
17127 Lvs. spathul. about 7-nerved central rib hardly promin. behind in upper half reflect. at point and sides glauco.
17128 Erect, Lvs. lin.-lanceol. twisted margins ciliated, Pedunc. branc. umbellate, Perianth 6-lvd. 3 outer ones ovato-
17129 Stem erect, Lvs. lanceol. obtuse obsoletely denticulated, Umbels many-flwd. Pedunc. angular [lanceol. serrated

17130 Limb of the perian. longer than tube with 3 blk. spots in the centre

[Sheaths ciliat. on margins
17131 Stem erect simple or bran. rounded glabr. jointed, Lvs. lin.-acuminated glabr. striated sheathing at base,
17132 Stem dichotom. bran. and jointed: lower part glabr. upper densely hairy, Lvs. scarcely sheath. lanceol. wavy striat.; lower downy, upper densely hairy [wider in proportion
17133 Lvs. all radic. ov. acumin. striat. Bracteas lanceol. lower ones longer th. flws. upper one gradually smaller and
17134 Lvs. lanceol. nerved, Corolla campanulate [flwd. Brac. ov. twice as long as pedic.
17135 Lvs. all radic. petiol. ov.-lanceol. very acute elegantly margined with white, Petiol. longer th. lvs. Rac. 12-14

17136 Stem glabrous, Leaves scattered lanceolate 3-nerved attenuated at both ends, Corolla tubularly campanulate
[volute papillosely bearded
17137 Stem erect smooth, Lvs. scattered ovato-obl. nerved petiol. Bran. 1-flwd. Flws. drooping reflexed, Cor. re-

17138 Lvs. very narrow linear scattered, Perianth smooth revolute, Capsule turbinate

[Lflts. ov. flat acute
17139 Stem leafy 1-flwd. Lower lvs. obl.-lanceol. channeled acumin. undul. glauc. Upper ones lin. flat, Perian. oval.
17140 Stem 1-flwd. glabrous, Flws. erect, Petals ovate lanceol. acuminated bearded at the apex, Lvs. ovate lanceol. ciliate, Bulbs woolly
17141 Stem pubescent 1-flwd. 3 outer petals acute 3 inner ones obtuse and mucronate, Lvs. obl. lanceolate pubescent
17142 Stem pubescent longer than that on lvs. Perianth campanulately spread, Segms. ellipt.-lanceol. acute bearded at apex margin involute [Filam. subulate
17143 Lvs. lin.-lanceol. subconvolute glauc. Petals lanceol. obtuse very spreading 3 outer ones longest, Stam. equal
17144 Scape pubescent scabrous, Lvs. flaccid, Segms. of perian. acumin. Stem 1-flwd.

[acute glab. inner ones blunt ciliated
17145 Glaucous, Stem few-flwd. Lvs. channeled acuminated upper ones dilated at the base, Outer segms. of perianth
17146 Stem 3-flowered one-leaved, Inner petals woolly

[ovate-lanceol. acumin.
17147 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate obtuse serrulato-fimbriate, Flws. globose, Sepals
17148 Umbel 2-3-flwd. Pedun. shorter than bract. Petals ovate very obtuse margin naked, Sepals ovate-lanceol. half length of petals

17149 Lvs. lanceol. subconvolute, Flws. terminal solitary

17150 Stem upright simple densely leafy, Lvs. lin.-lanceol. cuspid. recurv. patent ent. Rac. terminal many-flwd.

17151 Stem arborescent, Lvs. attenuated at both ends, Branches of panicle divaricate, Flws. nearly sessile

[3-parted
17152 Lvs. obl.-lanceol. subcomplic. obtuse, Segms. of perian. ovate-lanceol. acumin. reflex. nearly from base, Stigma
17153 Lvs. obl. or lanceol. Scape irregularly bran. 5-flwd. Segms. of perian. acumin. reflex. from middle, Stigma 3-lobed

17154 Habit of *Allium*

17155 The only species

17156 Lvs. broad linear longer than the scape, Bracteas equal in length to pedicels, Flowers disposed in a large sub-conical corymb. Perian. spreading persistent [few-flwd. Caps. rotate
17157 Lvs. lanceol. flat very smooth and densely ciliated (edged with broken cartilaginous margin *Lindl.*), Corymbs
17158 Scape 5-angled, Racemes 3-flwd. Pedunc. drooping, Cor. campanulate-patent, Bracteas very short
17159 Lvs. lanceolate sparingly villous, Racemes corymbose 5-7-flwd. Bracteas lanceol. equal to peduncles

and Miscellaneous Particulars.

History, Use, Propagation, Culture,

2581. Camássia 17162 *esculénta*. "This plant is known by the natives under the name of *Quamash*; and the bulbs are carefully collected by them, and baked between hot stones, when they assume the appearance of baked pears, and are of an agreeable sweet taste. They form a great part of their winter stores. Though an agreeable food to Governor Lewis's party, they occasioned bowel complaints if eaten in any quantity. It is perfectly hardy, requiring to be planted in a peat border, and may be propagated either by seeds or bulbs. (*Pursh.*)

2585. *Herréria*. A singular, but desirable, hot-house climber, growing freely in any good soil.

2587. *Mahónia*. "The species are elegant evergreen shrubs, with yellow flowers and pinnate leaves. The latter

[Segms. obl.-concave narrowed at base
17160 Lvs. weak lin. channel. cuspid. rather angul. extern. Scape erect 6-angled, Rac. simple conic. Perian. 6-leaved.

17161 Habit of *Massónia*, Umbel sessile

17162 Bulb ov. about size of hazel nut, Lvs. lin. acumin. channel. short. than scape broken back from weakness, Pedic. filif. ½ in. long, Perian. 6-lvd. 2 in. in diam.

17163 Stem paniculate, Petals and sepals revolute, Flowers nodding
17164 Scape 2-4-flowered rather leafy, Petals bearded capsules elongated

17165 Glaucescent, Lvs. distinct twisted

17166 Stem terete leafy, Leaves flat, Umbels 5-7-flowered

17167 Lvs. lanceolate, Segments of perianth ovate obtuse

17168 Cymes terminal bipartite, Branches terete, Branchlets striated glabrous

17169 Flws. campanulate stalked drooping, Stamens exserted descending, Leaf long solitary fasciate underneath
17170 Lvs. twin lanceol. pustulate, Scape erect, Corolla spreading reflexed, Petals nearly linear [broader at base
17171 Lvs. obl.-lanceol. acute channeled smooth margins undul. Flws. subsess. horizont. Brac. very small acumin.
17172 Lvs. twin lanceolate crenulated, Flowers pedunculate spreading, Corolla subcylindrical
17173 Flws. turbinate, Rac. loose pyramidal many-flwd. Lvs. broadly acuminated glaucous

ζ nígra *Dec.*, black-*fruited* η aspérma *Dec.*, seedless ϑ dúlcis *A. B.*, sweet-*fruited*
17174 Spines simple and 3-parted, Lvs. obovate oblong quite entire, Racemes many-flwd. Petals entire
17175 Spines 3-parted and very stiff, Lvs. oblong or obl.-lanceol. nearly ent. toothed in various degrees somewt. deeply and coarsely veined, Rac. sleud. long loose [Rac. short many-flwd. corymbose
17176 Spines trifid or simple, Lvs. oval cuneat. or elliptic. mucron. smooth under surf. glauc. ent. or spinulosely thd.
17177 Spines scarcely any, Lvs. roundish coarsely toothed rather glauc. white beu. Rac. very short compact pendulous

17178 Lvs. 3-6 pairs with odd one lowest pair near base of pet. Leafl. ov.-lan. rath. distant 1-nrvd. 4 or 5 spiny teeth on each side, Rac. nearly erect
17179 Lvs. 4 pairs with odd one lowest pair distant from base of pet. Leafl. ov. approxim. cordate at base 1 nrvd. 9 or 6 spiny teeth on each side, Rac. erect [somewhat 3-5-nrvd. Rac. elongated
17180 Lvs. 5-6 pairs with odd one lower pair dist. from base of pet. Leafl. ov. acumin. 12 or 14 teeth on each side

17181 Lvs. 2-3 pairs with odd one roundish-ov. opaque spiny toothed, Rac. diffuse, Root creeping
17182 Lvs. pinnate and ternate, Leaflets ovate oblong acute thin flat and quite entire

17183 Lvs. obl.-acuminated, Pedunc. termin. solit. short, Heads of flws. surrounded by ent. involucr. Cor. 7-8-lobed

17184 Lvs. obl.-lanceol. acuminated scarcely longer than pedicels

and Miscellaneous Particulars.

resemble pretty much those of the ash, and hence, doubtless, the name of Ash-berberry. Natives of the N.W. coast of Amer., and also of Nepal, and perhaps Japan. Though some botanists think that the characters ascribed to this genus, and those ascribed to *Bérberis*, are not sufficient to keep them separate as genera; yet the habits of the species of one, as to the mode of growth, foliage, and inflorescence, are so distinct from those of the other, as to induce us to adopt *Mahónia*. The species in British gardens are all of comparatively slow growth, and admit of but slow multiplication by layers, and scarcely at all by cuttings. Some of them, however, seed freely, and are readily propagated in that way." (*Arb. Brit.* vol. ii. p. 309.)

History, Use, Propagation, Culture,

2590. *Calochòrtus.* A genus of very handsome bulbous plants, which may be planted in a warm border in the open air during the summer, but should be taken up as soon as the leaves are withered, and kept dry till they begin to shoot, when they may be potted and kept in the green-house till the spring frosts are over.

Page 300. Class VIII. — OCTANDRIA. 8 Stamens.

Order 1. MONOGYNIA. 8 Stamens. 1 Style.

2594. *Chymocárpus.* Calyx persistent, valved in æstivation. Petals 2. Fruit baccate, composed of 3 1-seeded carpels.

2595. *Arthrostémma.* Cal. turbinate or campanulate, usually beset with bristles or scales on outside, 4-lobed. Petals 4. Stigmas 8, glabrous. Anthers oblong; having their connectives rather long, and bluntly biauriculate at base. Ovarium bristly at apex. Capsule 4-celled.

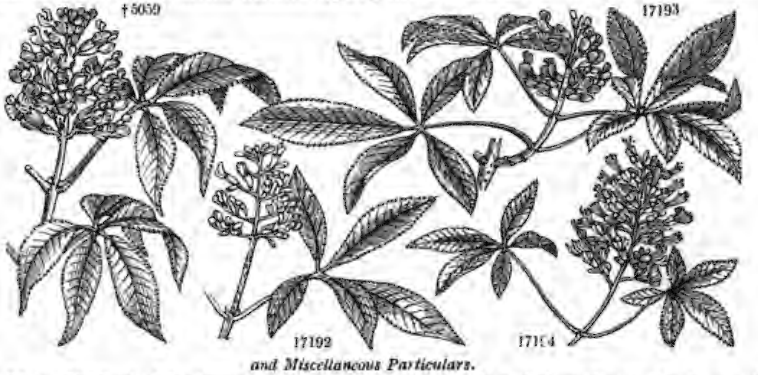
TRIGYNIA.

17185 Stem 3-5-lvd. 2-flwd. Petals beautifully bearded at base, Capsule erect linear-oblong
17186 Stem 3-5-flwd. Sepals revol. Petals with wart-like tuft of very short firm hairs
17187 Stem few-lvd. sub-2-flwd. Sepals erect, Petals with oblong tuft of rather loose hairs a short distance above base
17188 Stem sub-3-flwd. Lvs. convolute shorter th. pedun. Petals cuneate rounded at apex transv. bearded about middle

17189 Anthers versatile, Lvs. lanceol.-linear spreading, Flowers rising at the leaves

17190 Leaves fan-shaped, Spathe divided, Flowers panicled

17191 Segments of fronds connected by threads, Stipes unarmed



CLASS VII. — HEPTANDRIA.

MONOGYNIA.

†5058 Leafl. 5 ellipt.-obl. tapering at both ends smooth as is pet. axils of nvs. hairy on under surf. of lvs. Petals 4 longer than stams.
ẟ hŭmĭlis *Bot. reg.* 1318, ε hŭmĭlis pĕndula *A. B.*
†5060 Leafl. 5-7 pubesc. beneath and above upon nerves, Petioles pubescent flattish towards the tip

†5059 Whole plant including young wood covered with pubescence, Flwe. large and snowy

17192 Lvs. with rufous down on veins on upper side smooth beneath : rather plicate [petals less spreading
17193 Lvs. large smooth on upper surface and shining, Flwe. nearly as large as those of Æ'sculus Hippocástanum but
17194 Stamens much longer than corolla, Racemes very long, Root stoloniferous

and Miscellaneous Particulars.

2593. *Pāvĭa.* Middle-sized deciduous trees or shrubs, distinguishable from the horsechestnuts by the smoothness of their fruit, and the comparative smallness of their flowers, which have their petals erect and narrower. The leaves, also, are generally smaller and smoother. (*Arb. Brit.* p. 469.) Budding and grafting are the most usual modes of propagation, though they are frequently increased from seed.

2596. *Godĕtĭa.* Limb of calyx reflexed. Capsule opening at angles. Placenta persistent. Stamens all alike. Chalaza of the seed crowned round the margin by a fringe.
2597. *Clārkĭa.* Limb of calyx 4-parted. Petals 4, tripartite. Caps. 4-celled. Seeds not pappous.
2598. *Eucharidium.* Tube of calyx above the ovarium, elongated, filiform, with a 4-parted deciduous limb. Petals 4, clawed, trifid. Capsule 4-celled, 4-valved, dehiscent. Seeds numerous.
2599. *Francōa.* Calyx 4-parted. Petals 4. Stamens distinct, 16, 8 of which are fertile. Anthers 2-celled. Capsule 4-gonal, 4-celled.

History, Use, Propagation, Culture,

875. *Tropæ'olum* 17199 *tuberósum.* This species may be considered about as hardy as the potato, and, like it, produces eatable and agreeably flavoured tubers. Mr. Lambert was the first, we believe, who grew these tubers in England, and presented them at table. When boiled, the tubers are of a soft pulpy substance, and, Mr. Cameron says, in flavour resemble sea-kale, mixed with the hot taste of garden cress. The council of the Caledon. Hort. Soc. considers the tubers to be of a very delicate flavour, resembling the richest asparagus. Mr. Young of Epsom found the

MONOGYNIA.

[quite entire
17195 Leaflets 5-10 obl. or obovate little-toothed cuneated at base, Petals unguicul. rather longer than cal obtuse
17196 Leaflets 7 obovate lanceolate, Segments of calyx blunt
17197 Tuberous, Stem slender climbing branched, Lvs. peltately divided, Segms. 6-7 obov. ent. cuspid. Petioles cirrhose
17198 Lvs. peltate, Segms. 6-7 oblong-obov. ent. sess. Petals cuneif. Cal. segms. obtuse, Spur very short and very blunt
17199 Lvs. peltate nerved 5-lobed transversely truncate at base smooth, Petals almost length of calyx

17200 Leaflets 5 ovate or ov.-lanceol. ent. stalked, Petals 2 sessile acute quite ent. shorter than calyx

17201 Lvs. linear, Peduncles axillary 1-flwd. Stamens much exserted, Ectasis [Crests of anths. plumose
17202 Lvs. 5 in whorl reflexed woolly, Flws. termin. Bract. remote from cal. Tube of cor. cylind., inflated ribbed,
17203 Lvs. 3-4 in whorl linear glabr. Flws. termin. racemose, Cal. bracteate, Cor. with inflated tube and short limb
17204 Lvs. linear 5 in a whorl pubescent, Branchlets pilose, Corolla cylindrical glabrous constricted at apex, Syringòdea
17205 Glabr. Lvs. 4 in whorl linear spread. Flws. termin. pedicellate, Cor. ventricosely tubular, Border blunt, Bract. remote from cal. [Stam. and pist. enclosed aristate
17206 Lvs. glabrous, Flws. termin. Bract. remote from and close to cal. Cal. large inflated, Tube of cor. obl. inflated,
17207 Lvs. acerose, Corolla cylindrical, Limb short spreading [white limb
17208 Glabrous, Lvs. lin. 4 in whorl, Flws. termin. crowded, Cor. with elongate ventricose tube dark neck and
17209 Lvs. 4 in whorl lin. glabr. Flws. termin. Bract. remote from cal. Cor. ov.-globose with large open segments
17210 Lvs. 4 in whorl linear glabrous, Flws. axillary racemose, Stam. and pist. enclosed
17211 Branchl. villose, Lvs. in threes very narrow, Cor. campanulate, Style exserted, Stigma simple

17212 Lvs. 4 in whorl as well as bran. scabr. Flws. termin. erectish, Cor. ovate, Bract. remote from cal. Anth. crested
17213 Hairy, Lvs. acicular ciliated with long hairs, Flws. in racemose terminal fascicles, Cor. campanulate
17214 Lvs. 6 in whorl lin. flexuous recurved, Flws. termin. nearly sess. drooping capit. Bract. sess. Cor. curved ov.-obl. Anth. mutic
17215 Lvs. 4 in whorl lin. glabr. Flws. termin. and axill. Bract. distant from cal. Cor. tubular drooping
17216 Lvs. 6 in whorl crowded lanceol. each termin. by a hair, Flws. nrly. termin. drooping, Cor. cylindric contract. at neck [little exserted
17217 Glabrous, Lvs. lin. 5-6 in whorl, Flws. axill. and termin. drooping, Pedic. many-bracted, Cor. campanul. Style
17218 Glabrous, Lvs. 3 in whorl, Flws. terminal, Cor. campanulate, Style exserted
17219 Lvs. linear obtuse Corymbs 4-flwd. Cor. tubularly ventricose, Limb spreading, Stamens enclosed, Callista
17220 Lvs. short blunt, Branchlets 3-4-flwd. Cor. ovate, Stamens enclosed, Ertea [urceol. globose
17221 Lvs. 4 in whorl hispidly ciliated lin. spread. obt. Flws. termin. racemose pendul. Bract. remote from cal. Cor.
17222 Lvs. obtuse, Flws. terminal, Pedicels about 3 together, Cal. reflexed, Cor. ovate ventricose
17223 Lvs. short obtuse, Branchlets 3-4-flwd. Cor. tubular inflated towards the top Stamens enclosed, Syringòdea
17224 Lvs. 4 ? in a whorl lin. obt. Flws. lateral verticillate, Cor. with ventricose tube and spreading limb
17225 Lvs. linear 3 in a whorl, Flws. early, Cor. tubular ventricose constricted at the mouth, Anthers enclosed

[axill. 3-flwd. longer than pet
17226 Shrubby erect 4-gonally winged as are bran. Lvs. ov. acute serrul. glabr. on both surfs. shining above, Pedun.
17227 Suffrutic pilose, Lvs. petiol. ov. serrul. 5-nrvd. discoloured beneath, Flws. termin. solit. Lobes of cal. 4 serrated at apex

17228 Lvs. oblong-lanceol. acute nrly. ent. rath. pilose thickish, Stem tall simple angul. Caps. oblong tetragonal
17229 Stem branched pubesc. Lvs. obl. linear serrulated mucronate pubesc. beneath, Flws. sessile, Calyx angular, Petals entire [somet. obl. somet. ov. rath. cord. all obt.
17230 Lvs. glauc. pubesc. of several shapes, lower spatulate on long pet. distant: upper close togeth. somewh. sess.
17231 Lvs. obl. ellipt. somewh. obtuse slightly sinuately toothed atten. at base, Stem bran. succulent soft with down as is fol. [of stigma blunt spread.
17232 Stems ascend. bran. pubesc. Lvs. lanceol. acute dentic. glabr. atten. at base, Petals wrinkled or plaited, Segms.

[Caps. 4-winged
17233 Stem simple downy decumb. Lvs. lanceol. tapering at both ends margin. and slightly ciliat. Petals broad obcord.

and Miscellaneous Particulars.

tubers, when boiled, superior in flavour to any potato, though disposed to be watery and not boiling firm. (*Gard. Mag.* xiv. p. 254.)

History, Use, Propagation, Culture,

2596. *Godètia*. A genus of highly ornamental plants, separated by Spach from the genus Œnothèra. It contains all the species with purple flowers, which Dr. Lindley informs us will not mix with the yellow-flowered kinds, so as to form hybrids; neither do they close their petals in the sunshine, and thus forfeit all title to the name of Evening Primrose. Culture, &c., same as recommended for Œnothèra.

2597. *Clárkia*. A genus of very ornamental annuals, requiring the same treatment as that of the annual Œnothèra.

17234 Procumb. Lvs. pubes. altern. interruptedly pinnatif. sinuately toothed ent. at apex, Tube of cor. very long, Petals large obov. ent. 5-nrvd.
17235 Tomentose, Lvs. linear lanceol. toothed, Ovarium cylindrical, Petals 2-lobed, Stamens 4 fertile 4 sterile
17236 Glabrous, Stems decum. Lvs. linear lanceol. toothed, Capsules linear twisted, Root creeping

†6450 Lvs. lanceol. atten. at both ends bluntish, Tube of cal. short, Caps. ovate triquetrous sess. angul. pilose

17237 Lvs. lanceol.-obl. mucron. tapering into petioles, Caps. obl.-cylindric. somewh. tetragonal pilose
17238 Lvs. glauc. quite ent. pubesc. lower ones broadly ov.: upper ov.-lanceol. Caps. bluntly 4-gonal tapering from base villous
17239 Lvs. lanceol. bluntish slightly toothed glauc. Stem round, Caps. cylindrically tetragonal [villous
17240 Lvs. linear-lanceol. somewh. denticul. puberulous, Stem bran. weak puberulous, Caps. 4-gonal atten. at apex
17241 Lvs. linear-lanceol. quite entire glabr. Stem ascending diffuse bran. Caps. round elongat. acute larger th. lvs.
†6463 Lvs. linear spatulate, Stem bran. erect, Caps. furrowed cylindric. curved downy longer than bracteas

17242 Lvs. lanceol. glauc. ent. Caps. cylindric. atten. furrowed pubescent, Bran. long slender rod-like
17243 Lvs. linear-lanceol. slightly toothed, Anthers fiery red yellow at apex, Caps. linear sess. truncated
17244 Lvs. ovate-lanceol. ent. Caps. sess. ovate-oblong hairy
17245 Lvs. linear-oblong subdentated glabrous, Anthers crimson yellowish at summit

17246 Leaves linear, Petals deeply 3-lobed

17247 Leaves ovate dentated & entire, Petals rhomboid undivided

β Has the flowers of a pale brick-red rather than rose colour
γ Has the flowers semidouble
17248 Leaves lanceolate, Petals rhomboid entire

17249 Pubescent, Lvs. petiolate ovate entire, Flws. axillary solitary

[spreading petals, Stigma 4-lobed
17250 Bran. glabr. Lvs. 3 in whorl ov. acute denticul. on short petioles, Lobes of cal. oblong acute exceeding obov.
α
β Lvs. 3-4 in whorl, Flws. pendul. solit. Petals equal to cal. Tube of cor. conical, Stigma ovate

γ Lvs. in threes ovate toothed smooth as are bran. Calyx glob. half length of pendul. smooth filif. red pedun.

δ Lvs. oppos. glabr. on long petioles remotely denticul. Pedic. axill. nodding puberul. length of cal. Cal. lobes obl. acute exceeding pets. Stigm. ent.
ε
17251 Lvs. oppos. small ellipt.-obl. acutish dent. glabr. little ciliat. Pedic. axill. shorter th. flws. Cal. funnel-sh. lbs. ov. acumin. Stigm. 4-lbd.
17252 Bran. erect slender rod-like, Lvs. pale green thin, Cal. segms. very narrow & subulate
17253 Bran. smoothish, Lvs. scatter. & oppos. petiol. ov.-cord. or oval quite ent. glauc. & glabr. Pedic. sub-aggreg. Cal. lbs. reflexed, Stig. thick 4-lbd. [short. th. flws. Stig. undiv.
17254 Bran. puberul. Lvs. about oppos. small ov. or roundish ov. obt. almost ent. hairy above glabr. ben. Pedic. axil.
17255 Glabr. Lvs. 3 in a whorl ov.-obl. acumin. at both ends petiol. quite ent. Panic. trichotom. nrly. naked, Cal. lbs.
17256 Dioecious, Lvs. obovate, Calyx cylindrical, Petals roundish apiculated, Anthers enclosed [ov. acute reflexed
17257 Lvs. oppos. petiol. ov.-cord. acute denticul. glabr. Pedic. axill. short. th. flws.: upper ones racemose, Cal. lbs. ov.-lanceol. acute exceeds petals

17258 Lvs. oblong, Spikes short axillary & terminal, Cal. pubescent, Petals obovate obtuse, Stamens long
17259 Lvs. obl. obtuse, Panic. terminal branched hairy, Cal. pubescent, Bract. very short, Flws. pedicellate

and Miscellaneous Particulars.

2598. *Eucharidium.* A pretty and very neat little plant, seeds of which may be sown at any period of the spring or summer, as they will generally flower in about six weeks after sowing.

2599. *Francoa.* A genus of ornamental perennials, which are, however, found to be most useful if treated as half-hardy annuals, because, as perennials, they are too tender to endure the winter in the open air without protection. Besides this, they can only be propagated by seeds.

Order 1. MONOGYNIA. 10 Stamens. 1 Style.

2601. *Castanospérmum.* Calyx somewhat bilabiate, with short tube; upper lip bifid, lower one 3-fid. Petals 5, papilionaceous, with wings and keel nearly equal in length. Legume stipitate, large, oblong-cylindrical, 2-valved, usually 4-seeded. Valves coriaceous, spongy inside.

2602. *Reichárdia.* Sepals 5, joined into campanulate crenulated calyx. Petals 6-10, somewhat papilionaceous. Stam. declinate, distinct, cohering together beneath middle by beard. Style filiform. Stigma dilated. Legume samaroid, ending in oblong wing.

2603. *Eriostèmon.* Calyx 5-parted. Petals 5, marcescent. Stamens unequal, free, fringed, tapering into a thread which bears the anthers. Fruit of 5, rarely 1-2, carpels.

2604. *Phebáhum.* Calyx 5-cleft. Petals 5. Stamens unequal, smooth. Style and stigma 5-furrowed. Fruit of 5 capsular, 2-valved, 1-seeded carpels, girded by calyx.

2605. *Pieris.* Calyx 5-parted. Corolla tubular or ovate, with a contracted, 5-toothed, revolute mouth. Filaments dilated, furnished with two bristles at the tip. Anthers with short incumbent cells that open lengthwise. Style 5-cornered. Stigma truncate. Leaves coriaceous. Flowers drooping, terminal, racemose.

2606. *Pernéttya.* Corolla globose, with a revolute limb. Anthers with the 2-cells 2-lobed at the tip; the lobes bifid. Hypogynous scales 10, 3-lobed, surrounding the ovary. Berry with 5 cells, the dehiscence loculicidal.

2607. *Limnánthes.* Calyx 5-parted. Petals 5. Stamens 10. Nucule 5.

2608. *Chætogástra.* Calyx turbinate, pilose or scaly, 5-lobed. Petals 5. Filam. 10, glabrous. Anthers oblong, having connectives drawn out into simple or bifid spur, and sometimes only into 2 blunt tubercles. Ovarium bristly at apex. Capsules 5-celled.

2609. *Ceratopétalum.* Limb of calyx 5-parted, permanent. Petals 5, linearly multifid, permanent or wanting. Anthers beaked. Capsule 1-seeded from abortion, dehiscing at apex. Leaves simple or ternate.

2610. *Darwínia.* Tube of calyx drawn out into membranous deciduous limb, throat dilated. Lobes roundish, cordate. Stamens free. Ovarium 1-celled, 1-ovulate.

History, Use, Propagation, Culture,

2601. *Castanospérmum.* The seeds are eaten by the natives about Moreton Bay on all occasions, and, when roasted, have somewhat the flavour of Spanish chestnuts; and even Europeans, who have subsisted on them for two or three days together, have found no bad effects from them when roasted. For culture and propagation, see Ceratònia.

977. *Poinciàna* 17282 *régia* is a magnificent tree, no less remarkable for its extreme beauty than for its rarity, having been found only in Madagascar, near Foul Point, where it is known by the name of *Tanahou*.

17281 *Gilliésii.* The flowers of this species have a disagreeable smell, and are considered by the common people of Chile to be injurious to the sight; hence the vernacular name *mal de ozos.* The shrub will not grow unless in irrigated places. (*Don's Mill.* v. 2. p. 433.)

2602. *Reichárdia.* Culture and propagation the same as for Poinciàna.

2603. *Eriostèmon.* A genus of beautiful shrubs with pink flowers, which deserve a place in every collection of green-house shrubs. They require the same treatment as Phebálium.

2604. *Phebálium.* An equal mixture of loam and peat suits this genus of plants, but care must be taken not to overwater them, or crowd them amongst other plants. Cuttings root freely in sand under a bell-glass, without heat.

1014. *Rhododéndron.* "Under this genus, Professor D. Don has included the Azàlea, which, however technically correct, appears to us injudicious in a practical point of view; and though we have followed his arrangement in this article, yet we have indicated two sections, containing the Indian or tender, and the Asiatic and American, or hardy, azaleas, which those who cultivate extensive collections of these shrubs may, if they choose, consider as constituting the genus Azàlea as heretofore. Such persons, therefore, may view the genus Azàlea as remaining exactly as it is in

and Miscellaneous Particulars.

our *Hortus Britannicus*." (*Arb. Brit.* vol. ii. p. 1130.) "Of all the genera in existence," G. Don observes, "*Rhododéndron*" (under which he includes the Azálea) "comprises the most handsome, elegant, and showy shrubs for adorning shrubberies or planting singly on lawns." Though in Britain these plants are solely cultivated as ornamental, yet, in their native countries, they are not without their other uses. "The *Rhodoreæ*," Mr. Royle observes, abound in stimulant, and even deleterious, properties. Thus *Rhododéndron pónticum*, *R. máximum*, *R. ferrugineum*, and *R. chrysánthum*, are poisonous to cattle which feed on them; and yet, in moderate doses, are used in medicine, for the cure of rheumatism, &c. Azálea procúmbens *L.* and *Lédum palústre* are accounted diuretic; and *L. latifólium*, being more stimulant, is used as a tea, under the name of Labrador tea, but determines to the head. *Kálmia* latifólia is accounted poisonous, and honey collected by bees from its flowers is of a deleterious nature, as is that of Azálea póntica, which was so injurious to the soldiers in the retreat of the Ten Thousand. In the Himalayan species, *R. arbóreum* is more remarkable for its use as a timber tree than the other species. The flowers are eaten by the hill people, and formed into a jelly by European visiters. The leaves of *R. campanulátum*, being used as a snuff by the natives of India, are imported from Cashmere, under the names of *hoolas-kameeree* (Cashmere snuff) and *burg-tibbut* (Thibet leaf), though easily procurable within the British territories. It is remarkable that De Candolle mentions the employment in the United States, for a similar purpose, of the brown dust which adheres to the petioles of kalmias and rhododendrons. The leaves of *R. lepidótum* (a species not yet introduced into Europe) are highly fragrant, and of a stimulant nature." (*Royle Ill.* 219.) Culture, propagation, and other particulars, see p. 144. and p. 358, 359.

History, Use, Propagation, Culture.

2608. *Chætogastra.* The species require a mixture of loam, peat, and sand; and young cuttings root readily in heat, under a hand-glass.

2609. *Ceratopétalum.* A mixture of peat and loam suits this plant, and ripened cuttings root readily in sand, under a hand-glass.

2610. *Darwinia.* Singular plants, requiring to be grown in a mixture of loam, peat, and sand; and young cuttings root readily in sand, under a hand-glass.

2611. *Pachynèma.* This shrub thrives well in a mixture of loam and peat, and cuttings root freely in sand, under a hand-glass.

2612. *Adámia.* This shrub requires a mixture of loam, peat, and sand, and cuttings root readily in the same kind of soil, under a hand-glass. It is called *Bansook* by the natives.

[nrvd. villous both surfs. Pedun trichot.
17300 Stem somewh. 4-gonal clothed with adpressed villi, Lvs. petiol. broad lanceol. acumin. serrulately ciliated 5-
17301 Erect nearly simple, Stem 4-gonally terete villous, Lvs. almost sess. lanceol.-lin. acute quite ent. 3-5-nrvd. villous, Pedic. axill. 1-flwd.

17302 Leaves ternate, Flowers with petals

17303 Leaves acerose, Receptacle chaffy, Style 3 times length of flowers, Calyx red

DIGYNIA.

17304 A little leafless shrub with the habit of *E'phedra*. The only species

17305 The only species

17306 Lvs. cordate lobed dentately serrated, Racemes elongated, Petals oblong-linear pinnatifidly jagged

17307 Lvs. ovate acute serrat. pilose, Racemes termin. tomentose rather compound at the base, Flws. usually trigynous
17308 Stem erect dichotom. branched, Lvs. obovate spatulate nrly. smth. ciliat. on margins, Flws. axill. solitary

17309 Flws. aggreg. sess. Cal. scales broad mucronate with membranaceous margins longer than tube, Lvs. lanceol. many-nerved [lin. very long connate at base
17310 Flws. numerous sess. in hemispherical heads leafy bracts at base, Cal. scales ov. acumin. pressed to cal. Lvs.
17311 Stem erect, Flws. rather aggregate, Calycine scales 6 acuminated divaricating shorter than tube, Petals multifid bearded, Lvs. lanceol.

TRIGYNIA.

17312 Lvs. glabr. sagittately hastate angular acute, Hind lobes truncate margined horned, Petiole biglandular at apex

17313 Lvs. ovate lanceol. glauc. green above white ben. Racemes short panicled, Petioles biglandul. at apex

17314 Lvs. ovate obtuse smooth glaucous beneath 1 tooth on each side at base, Petioles without glands

17315 Lvs. ovate acute sharply serrated pilose, Rac. terminal tomentose, Flowers usually trigynous

PENTAGYNIA.

17316 Lvs. orbicularly cuneated, Petiole thick, Flws. in spicate panicles
17317 Lvs. flat cuneiform acutely mucron. crowded at tops of branches, Pedic. spreadg. Flws. on short pedic. along bran. of panicle

[compound, Petals lanceol. acute little long. th. stams
17318 Lvs. oppos. obsoletely denticul. adnate: inferior ones broadly ellipt. superior sess. cord. Corymbs termin.
17319 Lvs. opposite orbiculate denticulate [obtuse
17320 Stem flat on ground at base ascending, Lvs. obl. altern. obt. loosened at base, Cymes bifid glabrous, Petals 7

17321 Stem erect leafy, Pedun. umbelliferous 5-6-flwd. longer than lvs. Leaflets obovate, Petals crenated
17322 Stem erect branched, Pedun. long, Flws. subumbellate drooping before expansion, Leaflets 3 obcordate sessile

and Miscellaneous Particulars.

2614. *Stigmaphýllum.* A handsome climber, propagated by cuttings.
2615. *Thryállis.* A mixture of loam and peat will suit this plant, and ripened cuttings will root in sand under a hand-glass, in heat.
2616. *Galphimia.* A genus of rather handsome shrubs, requiring the same treatment as Thryállis.
2617. *Deutzia.* A very showy free-flowering shrub, which deserves a place in every collection. It is readily propagated by cuttings or layers. According to Kæmpfer, the wood is used by the cabinetmakers in Japan for making their very finest pegs, for which its hardness and toughness render it well adapted.
2618. *Echevèria.* Culture, propagation, &c., see Crássula, in p. 250.
1065. *O'xalis* 17321 *crenáta.* "The tubers of this plant are produced in considerable plenty, and are often 2 in. long and 1 in. in diameter. When raw, they are slightly subacid, but on being boiled they lose it entirely, and taste

History, Use, Propagation, Culture

very much like the potato, for which they might form occasionally an agreeable substitute at table. It is a native of Peru, and is cultivated abundantly in the gardens about Lima, as a salad, for which purpose its succulent stems, and acid flavour, seem strongly to recommend it. It grows freely in the open border, and is readily increased by cuttings, as well as by the tubers, which require to be taken up and treated as potatoes." (*Sw. Fl. Gar.*, 2. s. 125.)

2619. *Balbísia*. A showy conservatory plant, which may be increased by cuttings, but is apt to damp off ; if kept in health, it is very handsome.

17323 Stem erect fleshy leafy, Pedun. bifid corymbosely racem. at apex 4 times longer th. lvs. Lflts. obcord. Petals crenated at apex [very long
17324 Stem decumb. brau. Leaflts. lin. sess. acute, Pedun. much higher than lvs. Bract. approaching cal. Styles
17325 Hairy nearly stemless, Scape 1-flwd. drooping before expansion, Leaflets 3 obcordate
17326 Stem fleshy scaly, Leaflts. lin. obt. pilose beneath, Flws. umbellate, Pedicels and petioles twisted fleshy.
17327 Stemless, Scapes 2-3-flwd. Leaflts. 3 obcordate [lvs. with 2 bracts ab. middle
17328 Stemless, Lflts roundish obcord. bright purple and dotted with shining golden dots beneath, Scapes longer th.
17329 Stemless, Lflts. 3 sess. broadly obcord. pubesc. ben. smth. ab. Scape compress. paniculately many-flwd. Petals truncate uneq. cren.
17330 Bulb large scaly stemless, Lflts. 4 large obcord. pilose glauc. ben. on short pilose petioles, Umbels many-flwd.
17331 Tuberous, Lflts. 3 roundish-obov. deeply emarginate hairy leprous ben. on margins, Scape many-flwd. Filam. and styles bearded [middle
17332 Stem very short leafy, Lflts. 6 ovate clothed with close-pressed villi, Scapes longer than lvs. with 2 bracts in
17333 Stem very short leafy, Flowers pale crimson
17334 Stipe fleshy, Leaflets 3 obcordate ciliated pubesc. Scape 3-5-flwd. bifurcate, Calyx ciliated
17335 Stemless smooth, Lflts. 3 cuneate 2-lobed, Lobes diverging, Scape many-flwd. Sepals ovate

17336 Lvs. usually alternate with linear pilose segms. Peduncles much longer than lvs.

17337 Lvs. ovate and lanceolate pubescent, Flowers solitary, Petals cut [lvs. spatul. on long footst. Stem lvs. cord. sess.
17338 Stems tufted diffuse, Flws. in dichotom. bundles 1-flwr. in each fork on long peduncles, Lvs. leathery, Radic.
17339 Lvs. linear channelled, Stem ones opposite subulate, Petals jagged

17340 Stems not clammy, Petals entire, Lvs. lanceol. linear ciliated at base

---

Order 3. TRIGYNIA. 12 Stamens. 3 Styles.

2622. *Poinsettia.* Involucrum 1-lvd, androgynous, 5-celled at base, appendiculate outside, nectariferous. Flowers pedicellate, naked: male ones monandrous, in two rows; female ones solitary. Germen 3-lobed. Lobes 1-seeded.

Order 6. DODECAGYNIA. 12 Stamens. 12 Styles.

2623. *Cephalótus.* Calyx coloured, 6-cleft. Stamens 12. Anthers didymous, glandular on the back. Ovaries 6, distinct. Styles terminal. Chenia 1-seeded.

MONOGYNIA.

[by whorl of lvs. and crowned hairs.
17341 Stem diffuse bran., Lvs. scattered cylindr. acute with pilose axils, Flws. 3-4-together termin. crowd surround.
17342 Stem erectish bran. at base, Lvs. obl.-cylindr. rather compressed obtuse dotted axillary fascic. of hairs erect adpressed, Flws. termin. usually solit.

17343 Glaucous, Lvs. fleshy rhomboid acute petiolate, Raceme simple loose, Calyx spotted, Petals obcordate.
17344 Glabrous diffuse, Lvs. spatul. acute elongat. at base, Flws. racemose, Pedicels and bracteas very short
17345 Lvs. fleshy obovate-obtuse elongat. into petiole somew. d scoloured ben., Rac. bending, the pedicel drooping after the falling of the petals [bose, Pedic. little long. th. brac.
17346 Glauc., Stems numer. prostrate leafy, Lvs. linear, Common pedunc. termin. naked simple or bran., Rac. corym.

and Miscellaneous Particulars.

2620. *Viscária.* Culture as in the common catchfly.

2621. *Calandrínia.* A genus of ornamental succulent plants, generally treated as annuals, although properly they are not so, as they may be preserved in the green-house through the winter, and in time, so treated, *C. grandiflóra* will become shrubby. They require to be planted in hot dry exposed places.

History, Use, Propagation, Culture,

2631. *Púrshia.* A dry light soil suits this plant, and cuttings of the young wood will root in sand under a hand-glass.

17361 Globose subcylindrical, Mammillæ lrge. conical obtuse, Spines 14—16 strong straight nearly equal, Petals very unequal [acuminate

17362 Oblong subcylindrical, Mammillæ lrge. subtetragonal, Spines 7—8 straight slender one longer than rest, Petals

17363 Branches diffuse creeping triangular, Spines 4—5 stiff spreading.

17364 Hybrid between C. speciosissimus and C. flabelliformis [linear obtuse

17365 Stems creeping triangular, Spines numerous bristle-shaped, Flowers solitary from the centre of the bristles, Petals

17366 Branches deeply serrated naked, Tube of flower very long slender, Segms. of cor. lin. lanceol.

17367 Stem serrated repand, Tube of cor. short scaly unarmed

[Petals keeled

17368 Branches seldom with any spines except when young, Cor. large ringent nearly four times longer than tube,

17369 Branches cuneate oblong undulated, Margins appearing curled from large crenatures

6884 Proliferous loose, Joints ovate, Spines setaceous

17370 Joints ovate oblong blunt at both ends, Spines setaceous length of the wool

6904 Lvs. ellipt. Prickles solitary in axils of lvs. fascicled on stems, Flowers panicled, Fruit globose

17371 Lvs. ellipt. acute tapering into short footstalks, Spines fascicled, Upper axils bearing thick rounded fleshy 3-5-flwd. pedunc., Petals obov. retuse soon reflected

17372 Stem with white shining epidermis, Lvs. sinuately toothed, Capsule naked 3-valved, Seed broadly marginate. Flws. in leafy panic.

17373 Stem branched hispid, Lvs. ovate lanceol. pinnatifid, Bract. pinnatifid, Petals 5 obovate cuspidate

17374 Lvs. ov. acumin. serrately denticul. rounded at the base 3-nerved, Flws. fewer and larger than in *P. vulgāris* and scentless [minate

17375 Bark whitish, Lvs. broad-ovate acumin. toothed about 5-nrvd. hairy ben. Inflor. racemose. Lobes of cal. acu-

17376 Lvs. ovate-oval with long acuminate tip serrat. toothed 3-nrvd. hairy ben. Inflor. subracemose, Flws. 5-7 showy slightly scented [level with stamens

17377 Lvs. oval-ovate with long acuminate tip toothed pubes. ben. Flws. solitary or 2-3 together, Stigmas about

17378 Lvs. ovate acuminated denticulated toment. ben. Racemes termin., Pedicels oppos. Lobes of cal. ovate acute

17379 Peduncles angular short usually solitary, Lvs. ovate lanceol. acum. Calyx hairy 4-cleft, Petals hairy outside

17380 Subdecumbent, Lvs. grouped wedge-sh. ending in 2-3 teeth villose ab. toment. ben. Buds scaly, Stipules none, or minute

17381 Leaves wedge-shaped oblong pinnatifid plaited, Ovaries 14

and Miscellaneous Particulars.

2632. *Cowānia.* A handsome evergreen hardy shrub, with large showy blossoms resembling a small rose.

17441 Stem erect hairy corymbosely panic. at apex, Lvs quinate lower ones petiolate upper alm. sess. Lflts. lanceol.

7629 The only species
β The only form known in British gardens previously to about 1834

Page 456. Class XIII. — POLYANDRIA. Stamens many, hypogynous, or inserted under the Ovary.

Order 1. MONOGYNIA. Stamens many, hypogynous. Style 1.

2635. *Rydnea*. Flowers hermaphrodite, apetalous, with petaloid urceolus between the stamens and pistil. Fruit baccate, indehiscent.

2636. *Achlys*. Sepals 0. Petals 0. Flowers naked, disposed in a dense spike. Stamens numerous. Stigma dilated, hence concave. Ovary ovate, smooth, 1-celled, 1 ovule fixed to bottom of cell.

2637. *Hunnemannia*. Petals 4. Stamens indefinite. Stigma peltate, 4-furrowed, slightly 4-lobed. Capsule silique-formed, rather compressed, 10-ribbed, 1-celled, 2-valved.

2638. *Lidia*. Calyx permanent, 5-7-parted; lobes oval. Petals 0. Stamens numerous, inserted in the disk. Anthers roundish. Ovary 1, ovate. Style filiform. Stigma 3-fid, rarely 4-fid. Berry dry, globose, pointed by the style, 6-8-seeded.

2639. *Azara*. Calyx 4-5-parted. Petals 0. Style awl-shaped. Stigma obtuse. Berry many-seeded.

2640. *Lætia*. Calyx 5-parted, marcescent. Petals 5, or wanting. Stamens indefinite, hypogynous. Anthers roundish. Capsule fleshy, 3-5-valved, small, globose, acuminated with the style.

2641. *Godoya*. Calyx of many deciduous sepals. Petals 5. Stamens numerous, disposed in many rows, or collected into five bundles. Anthers long, biporose. Style simple. Capsule 3-5-valved, 3-5-celled, with the edges of the valves bent inwards, forming the dissepiments, many-seeded. Seeds winged.

2642. *Dendromecon*. Sepals 2, caducous. Petals 4. Stamens numerous, filif. Anthers linear. Stigmas 2, sessile, short. Capsule silique-formed, 1-celled, 2-valved. Placentæ marginal, filif. Seeds many, pear-shaped, smooth.

History, Use, Propagation, Culture,

2635. *Rydnea* 17442 *speciòsa* is a beautiful and singular plant, deserving a place in every stove. Ripened cuttings root freely in sand, under a bell-glass, in heat. The plant thrives in vegetable mould with a little sand.

2636. *Achlys* 17443 *triphỹlla*. This plant succeeds well in common garden soil, and is increased by division of the root.

2637. *Hunnemannia*. For culture, &c., see Eschscholtzia, p. 1218.

2643. *Platystèmon.* Sepals 3, caducous. Petals 6. Stamens numerous. Filaments dilat. Membrane cordate. Anthers linear. Ovaria numerous, linear, each terminated by a linear sessile stigma. Capsules distinct, torulose, articulated, indehiscent, transversely many-celled, hispid. Seeds pendulous, solitary in the cells.

2644. *Platystigma.* Sepals 3, ovate, deciduous, hairy. Petals 4-5. Stamens numerous. Filaments thread-like. Anthers linear, 2-celled, opening sideways. Stig. 3, ovate, acute, erect, divergent. Caps. oblong, attenuated at base, 1-celled. 3-furrowed, 3-valved, opening from top to base. Seeds numerous, minute, egg-shaped, black, smooth, shining.

2645. *Calythrix.* Calyx drawn out into a cylindrical tube; lobes ending in a long bristle each. Stamens 10-30, free. Fruit dry, indehiscent, 1-celled.

Order 2. DI-TRIGYNIA. Stamens many, hypogynous. Styles 2-3.

2646. *Pleurándra.* Stamens 5-20, all leaning to one side, and fertile. Ovaries 2. Styles filiform. Sepals and petals 5.

Order 3. TETRAGYNIA. Stamens many, hypogynous. Styles four.

2647. *Eschscholtzia.* Stamens indefinite. Stigmas 4, 2 short and 2 long. Caps. elongated, silique-formed, 2-valved, 1-celled. Cal. calyptrate. Recept. expanded.

Order 5. POLYGYNIA. Stamens many, hypogynous. Styles many.

2648. Talauma. Carpels disposed in spikes, 1-2-seeded, joined together into a strobile-like fruit opening valvately and irregularly on the outside. Calyx of 3 sepals.

MONOGYNIA.

17442 Under surface of the leaves stellately hairy on the ribs, Peduncles 1-flwd.

17443 Lflts. with very unequal sides upper side or front coarsely sinuate-toothed or lobed, Lobes blunt finely rayed with nerves

17444 Caps. hispid oval, Sepals hairy, Lvs. pinnatif. hairy laciniated part often terminating in bristles, Stems bran. and leafy [Lbs. cut, Lobules termin. by a bristle

17445 Caps. hispid obov.-obl. Sepals bristly, Pedun. radic. very long covered with adpressed hairs, Lvs. pinnately lbd.

17446 Caps. smooth ellipt. Sepals hairy, Stem few-flwd. covered with stiff bristles, Lvs. somew. stem-claspg. glauc. sinuately pinnatif. [terminated by a bristle

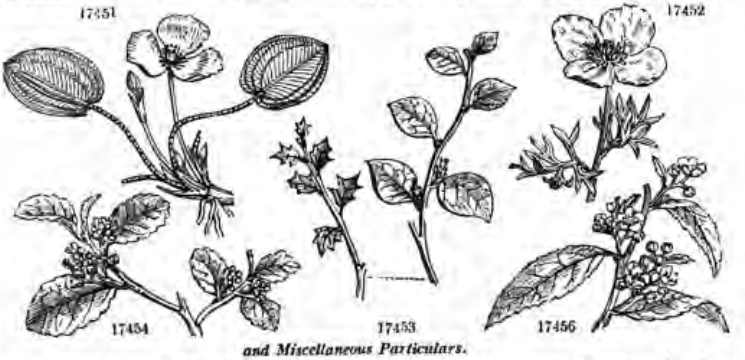
17447 Caps. smooth obov. Sepals rather setose, Stem smooth few-flwd. Lvs. stem-claspg. glauc. toothed each tooth

17448 Caps. smooth obov.-obl. Sepals hairy, Stem covered with numer. bristly hairs, Lvs. sess. hispid sinuately pinnatif. Lbs. ov. and distant

17449 Lvs. profoundly sinuat. or pinnatif. glaucescent, Nrvs. with prickly bristles, Flws. solit. Caps. oblong dply. 5-6-furrowed covered with smoothish reflex. prickles

17450 Lvs. sinuated smooth spiny-toothed, Nrvs. unarmed, Flws. panic. polyandr. Caps. bluntly quadrangul. almost unarmed

17451 Lvs. petiol. roundish-ov. obtuse 7-nrvd. central one remarkably swollen below, Petioles terete, Pedunc. elongat. 1-flwd. Petals twice length of cal. Pistils 6



17452 Leaves decompound triternate glaucous, Lflts. linear bluntish

17453 Lvs. obov. shining veiny those of the young plants small and spinosely-toothed those of adult ones larger and quite entire

17454 Leaves in pairs toothed larger one elliptical smaller one roundish, Flws. umbellate

17455 Lvs. in pairs quite entire larger one obovate smaller one roundish, Flws. in drooping spikes

17456 Flws. apetalous, Pedun. axill. many-flwd. sub-divided, Lvs. oblong acute somewhat crenated shining

and Miscellaneous Particulars.

2638. *Lùdia.* Shrubs with lateral, almost sessile, flowers, which thrive in a mixture of loam, sand, and peat; and ripened cuttings root freely in sand, under a hand-glass, in heat. The native name of L. heterophýlla is *Bois sans écorce.*

2639. *Azára.* For propagation and culture see Lùdia.

History, Use, Propagation, Culture,

2641. *Godoya* is a genus of elegant trees worth cultivating. A mixture of sandy loam and peat suits them, and ripened cuttings root freely in sand, under a hand-glass, in heat.
2642. *Dendromecon.* Requires some care to keep it through the winter.
2643. *Platystemon.* Remarkable for the peculiar pale yellowish white colour of its flowers.

17457 Lvs. oblong bluntish obsoletely serrul. Racemes axill. or termin. compound elongated, Cal. of 10 sepals, Stamens about 40

17458 The only species

17459 Whole plant hairy spreading, Lvs. lanceolate in threes, Scape solit. Carpels hairy

17460 Carpels smooth

17461 Stems very short and densely covered with leaves, Lvs. linear ent. amplexic. 1-nrvd. Peduncle 1-flwd. slightly hairy erect.

17462 Lvs. on short petioles scattered lax patent (less so and more crowd. in young bran.) tereti-filif. acute dotted, Tube of cal. elongat. very narrow upwards

17463 Petals obov. mucronately acumin. longer th. cal. Stam. 30-35, Lvs. and flws. nearly sessile
17464 Petals oval mucronately cuspidate much longer than cal. Stamens 30-40, Flowers and leaves stipitate

[5-celled
17465 Lvs. somew. 3-nrvd. linear margins revolute canes. ben. Cal. 3-5-sepaled pilose, Sepals ovate acute, Capsules
17466 Erect, Bran. hispid vill. Lvs. on short footstalks obt.-lanceol. obl. pubes. and waved at margins veiny ben. Peduncle cymose [rough, Flowers cymose
17467 Lvs. alm. sess. ovate-lanceol. acute 3-nrvd. wrinkled smthish. ciliat. netted with veins ben. Nrvs. and veins
17468 Lvs. on short footstalks obl.-lanceol. 3-nrvd. acute undulat. somewhat denticul. and ciliat. rather hairy, Petals broad cuneat. imbric. [broad cord. villose
17469 Lvs. broadly cord. acute, Margins waved denticul. ciliat. Pedun. bracteate somewhat cymose pilose, Sepals
17470 Lvs. narrow-lanceol. wrinkled reticul. ben. almost sess. Peduncles villose generally 3-flwd.
17471 Lvs. broad-ovate twisted at top acutish wrinkled and hoary ben. Footst. dilat. at base somewhat sheathing, Cymes 5 or 10-flowered [acute
17472 Lvs. alm. ses. tapering to base ov-obl. obt. wrinkled clthd. with starry pubes. Outer sepals broadly cordate
17473 Lvs. stalked cord.-ov. 3-nrved. reticul. veined scabr. ab. clthd. with fascicled hairs ben. Margin fringed, Pedun. pilose 2-3-flowered
β Lvs. pubescent on both surfaces, Branches twiggy diffuse and rather prostrate

[oblique hoary ben.
17474 Bran. rath. hairy clthd. with leprous toment. scabr. brownish grey, Lvs. sess. tapering to base obov-obl. rath.
17475 Young bran. vill. toment. hoary, Lvs. toment. hoary obl.-lanc. tapering to base, Ped. very short 2-flwd. Cal. 5-sep.
17476 Bran. leprously white, Lvs. obov.-lanceol. white on both surfs. tapering to base pilose ab. scabr. from papillæ ben. Sepals 3 or 5 acute [Racemes axill. or termin. many-flowered
17477 Somewhat dichotom. bran. Bran. rather tomentosely cinereous, Lvs. lanceol.-obl. tapering to base hoary ben.
17478 Branlts. simple hairy, Lvs. ovate-obl. acute sess. hairy, Pedun. and cal. hairy canescent, Pedun. solit. 1-flwd inner sepals ovate acumin. [canescent nrvd. ben. furrowed ben.
17479 Stem 4-gonal, Bark rough scaly, Bran. hispidly hairy, Lvs. ov.-obl. ending in petiole 3-nrvd. hispidly hairy
17480 Bran. twiggy, Lvs. altern. lin.-obl. hairy alm. sess. Pedun. solit. 1-flwd. almost oppos. the lvs. rameal or termin. Cal. hairy [slender few-flowered
17481 Bran. dichotom. smthish. Lvs. minute ovate acute glabr. margins revolute on short footstalks, Racemes
17482 Bran. clthd. with hoary toment. Lvs. roundish or ovate obt. green and beset with hisp. hairs ab. and hoary toment. ben. Rac. simple, Cal. pilose [Hairs cinereous
17483 Procumb. Bran. pilosely hairy, Lvs. green on both surfs. obl. ellipt. rather glabrous or with hairs in fascicles,
17484 Procumb. Bran. ascend. pilosely toment. canesc. Lvs. ov.-obl. green and strigosely pilose ab. hoary toment. ben., Rac. simple few-flowered [Rac. long hairy bearded many-flwd.
17485 Bran. clothed with fascicled hairs, Lvs. hairy green both surfs. lower ones roundish-ovate upper ones ellipt.
17486 Bran. procumb. rather toment. Lvs. flat ov.-obl. acutish smth. ab. densely toment. ben. pale cinereous, Stips. rath. pilose about eq. to petioles [Stips. awl-sh. pilose and bristly at tip
17487 Procumb. Bran. rath. toment. and hoary, Lvs. obl. revolute margins hoary toment. ben. greenish glauc. ab.
17488 Bran. rath. toment. Lvs. flat or hardly revolute at margins toment. hoary ben. greenish glauc. ab. lower lvs. ov.-obl. obt. upper lanceol. acute [Stips. awl-sh. lin. longer than pets.
17489 Bran. hoary toment. at apex, Lvs. lanceol. acute margins revolute green and smthish ab. hoary toment. ben.
17490 Bran. toment. rath. hoary, Lvs. lanceol. acute flattish hoary toment. ben. green and rath. scabr. ab. Stips. lin. ciliat. longer than pets. Cal. clthd. with violac. toment. [at top somewh. longer than lvs.
17491 Lvs. oblong flat or concave above hoary-toment. beneath green and glabr. above, Stips. obl.-lin. ciliat. bristly
17492 Bran. hairy-tomentose, Lower lvs. oval upper ones oblong-lanceol. green on both surfs. flat hairy, Cal. hairy, Petals imbricate

and Miscellaneous Particulars.

2644. *Platystigma.* A pretty little hardy annual, and requiring the usual treatment of such.
2645. *Colythrix.* A genus of singular plants, requiring the same treatment as that recommended for Lûdia, p. 1213.

History, Use, Propagation, Culture.

2647. *Eschscholtzia.* The generic name Chrysèis has been applied to this genus by Dr. Lindley, under the supposition that the name *Eschscholtz* was the same as that of *Elsholtz*, after whom another genus had been named. It has, however, since been proved that the names are quite distinct, therefore we retain that of Eschscholtz*ia*. Showy flowers, which, though they will occasionally last several years as perennials, are grown as annuals, and are desirable for the flower-garden.

17515 Pet. ditto, Lvs. pubes. 5-lbd. lbs. dply. serrat. Brac. lanceol. villous clammy, Spur curved, Capsule smooth
17516 Pet. ditto, Lvs. 3-5-parted, Lbs. narrow somew. pinnatif. acute upper lvs. 3-parted with entire lobes, Rac. lax, Caps. pubes. [long. th. pedicel.
17517 Pet. dilat. and sheathing at base, Lvs. many-parted, Lbs. linear, Rac. elongat. crowded, Spur straight blunt rather
17518 Stem erect slender a little bran. and rather pubes. at apex, Pedic. much longer than the awl-sh. bracteas
17519 Lvs. petiolate tripartite segms. lin.-cuneate ent. or dply. and uneq. bfid, upper ones narrowest, Rac. lax elongat. Rachis and pedicels downy

TETRAGYNIA.

17520 Stigmas 4 two longer than the others, Seeds globose almost black
17521 Stem branching and leafy, Segms. of lvs. linear, Peduncle with funnel-shpd. appendage, Limb much dilated, Cal. long and acumin. [large nearly flat
17522 Stem dwarf densely bran. Segms. of lvs. linear wedge-sh. tridentate at apex, Cup of pedunc. funnel-sh. Limb

PENTAGYNIA.

δ stellâta (starred *double blue & white flwd*) ε dégener (degenerate *double blue & white flwd*)
17523 Spur incurved, Caps. very smooth, Stem 1-2-flwd. almost naked smooth, Sepals very blunt
17524 Hybrid between A. sibirica and A. vulgâris
17525 Spur straight equal in length to petals, Stamens equal in length to petals, Styles protruding
17526 Spur straight very short equal in length to pet. Petals thrice as long as cal. Pedun. radic. 1-flwd. almost naked
17527 Spur straight length of limb, Sepals oval, Stem few-flowered, Lvs. deeply divided [longer than petals
17528 Spur straight much longer than petals and very short stamens, Styles not protruding, Sepals lanceol. much

POLYGYNIA.

δ Differs from var. ε in having rather broader leaves and larger flws., and forms a broader and more compact
ε Lvs. oblong-elliptical generally rusty beneath, Flws. somewhat contracted [tree or bush
ζ Has roundish leaves
η Lvs. oval-oblong, Flws. fully expanded
θ
Lvs. lanceol. pointed at both extremities wavy

β Is a supposed hybrid between M. glaúca and M. tripétala
γ Lvs. ellipt. acute at both ends resembling those of M. tripétala but thicker smaller and glaucous beneath

β Hardly distinguishable from M. conspícua except by the flws. which resemble in form those of M. purpúrea
γ Closely resembling var. β from which it differs in flowering somewhat earlier [var. grácilis
δ A hybrid scarcely differing from var. γ
ε

β Leaves ovate oblong acute, Flws. greenish
γ Leaves much larger than those of the species

17529 Lvs. ovate roundish somewh. cuneated at base, Petals 12 thick oblong obtuse
17530 Lvs. oblong acumin. at both ends, Flws. 9-12 petaled outer ones short, Pedun. 1-flwd. rather droopg. clthd. as are petioles of young lvs. with ruf. vill.

17531 Lvs. cuneate-obov. obt. under surf. as well as bran. clthd. with brown pubes. Flws. sess. Outer petals obov. much larger than cal. [ab. bluntly cord. 5-lbd. 3-lvd.
17532 Lvs. large cord. 5-lbd. woolly ben. Lbs. broad ov. cut and cren. those of involucr. stalked woolly ben. smth.
17533 Lvs. bitern. those of involucr. on very short stalks, Lbs. elongat. acumin. Pedic. 2 pubescent, Sepals 5 elliptical

and Miscellaneous Particulars.

2648. Talaúma is a genus of magnificent trees and shrubs, resembling magnolias. A mixture of loam, peat, and sand suits them. They may be increased by layers or inarching on Magnólia obovàta, and ripened cuttings will root in sand, under a hand-glass, in heat.

Page 490. CLASS XIV. — DIDYNAMIA. 4 STAMENS, of which two are shorter than the others.

Order 1. GYMNOSPERMIA. Pericarpium divided into four lobes resembling naked seeds.

2649. *Lophânthus.* Calyx equal, or oblique, or sublabiate, usually 15-nerved; superior teeth the largest. Corolla bilabiate. Stamens ascending, or diverging.
2650. *Aphanochîlus.* Corolla tubular. Limb short, bilabiate. Anthers versatile. Cells divaricate. Lobes of gynophore shorter than ovarium.
2651. *Dysophýlla.* Anthers terminal, also the younger ones confluently 1-celled. Stamens somewhat declinate. Corolla almost regular.
2652. *Pycnóstachys.* Lower segment of corolla elongated, concave. Teeth of fructiferous calyx subulately spinose. Whorls of flowers spicate.
2653. *Sphácele* Calyx reticulately veined, 5-toothed, limb not dilated, teeth nearly equal. Tube of corolla ample. Cells of anthers linear, diverging.
2654. *Perilômia.* Achenia membranously winged. Segments of corolla flattish. Gynophore elongated, incurved, oblique at apex. Lips of calyx entire.
2655. *Roylea.* Calyx tubular at base, 10-nerved. Segment 5, equal, oblong, membranous.
2656. *Micromèria.* Tube of corolla rarely exserted. Calyx nearly equal. Superior stamens antheriferous.
2657. *Gardoquia.* Calyx tubular, somewhat incurved, with an equal or sub-bilabiate mouth. Tube of corolla much exserted. Stamens 1-3, now and then sterile.
2658. *Physostègia.* Calyx obscurely veined, inflated after inflorescence. Corolla much exserted, with an ample throat.
2659. *Cóleus.* Fructiferous calyx toothed, not spiny, with an open mouth. Filaments monadelphous. Lower segment of corolla elongated, concave.
2660. *Chilòdia.* Upper lip of calyx entire, tube short, 13-nerved, lower one bifid. Anthers mutic, 2-celled.

Order 2. ANGIOSPERMIA. Seeds several, enclosed in an undivided pericarpium.

2661. *Pentaròphia.* Calyx adnate to the ovarium. Corolla superior. Ring of glands hardly present. Anthers connected by pairs.
2662. *Rytidophýllum.* Calyx adnate to the ovarium. Corolla superior. Epigynous ring thick and sinuated. Leaves stipulate.
2663. *Sinningia.* Corolla oblique, ringent, with only one gibbosity at base. Calyx adnate to the ovarium, angularly winged.
2664. *Amphicome.* Calyx tubular, 5-toothed. Corolla tubular, ventricose near base. Limb 5-lobed, ciliated. Stamens 4, didynamous, with rudiment of a fifth. Stigma bilamellate. Capsule silique-formed. Seeds winged at both ends, and bearded.

GYMNOSPERMIA.

17534 Leaves of involucrum 3-5 cleft on short stalks with deeply toothed segments, Sepals 4-5 oval [umbellate
17535 Radic. lvs. 3-5-parted segms. trifid very entire densely villous at margins those of involuer. undivided, Flws.

γ Is a very beautiful var. The sepals are cream-coloured, suffused with violet spots, Lvs. and bran. more hairy than those of the sp. [spreading at apex wavy
17536 Pedunc. 1-flwd. somewh. long. than lvs. Lvs. biternately decompound, Lflts. ent. or 3-lobed, Sepals half-
17537 Pedunc. 1-flwd. Flws. campanulate tomentose, Sepals oblong, Lvs. pinnate, Leaflets ovate serrated pilose
17538 Pedunc. 3 1-flwd. Lvs. ternate smooth leaflets ovate entire flws. drooping
17539 Flowers axillary panicled, Leaves subbiternate villous, Leaflets cordate acuminated serrated 3-lobed, Sepals obtuse. [naceous margin distend.
17540 Lvs. spreading hairy ternate, Segms. ovate acute ent. Pedunc. 1-flwd. Sepals 6-8 obl. lanceol. acute membra-
17541 Pedunc. 1-flwd. not bractd. several togeth. Lvs. ternately parted, Segms. ovate-obl. acumin. incisely toothed, Sep. ellipt.-obl. mucronul. spreading

---

2665. *Fièldia.* Calyx 5-parted, enclosed in spathe-formed bractea, which is cleft on one side. Corolla tubularly ventricose. Limb equal, 5-lobed, sub-bilabiate. Stamens 5; 4 fertile exserted, sterile one enclosed. Stigma bilamellate. Berry spongy, longer than calyx.
2666 Têcoma. Calyx 5-toothed. Corolla with short tube and campanulate throat. Limb 5-lobed, sub-bilabiate. Lobes of anthers divaricate. Capsule silique-formed; dissepiment contrary. Seeds disposed in 2 rows, imbricate, winged, transverse.
2667. *Salpiglóssis.* Calyx 5-angled, 5-cleft. Corolla funnel-shaped, 5-lobed. Lobes 2-lobed. Stamens didynamous, with rudiment of a fifth between the 2 longer ones. Style tongue-shaped at apex. Stigma truncate, transverse.
2668. *Calámpetis.* Calyx semi-5-cleft. Corolla with tubular base, ventricose throat, and a contracted 5-lobed limb. Stamens 4, didynamous, without any rudiment of a fifth. Lobes of anthers obtuse, divaricate, distinct at apex. Wings of seeds repandly sinuated, emarginate at base.
2669. *Eccremocárpus.* Calyx membranous, 5-cleft, coloured. Corolla tubular, with an equal throat, and a 5-lobed equal limb. Stamens 4, didynamous, with the rudiment of a fifth. Anthers versatile. Cells parallel, combined. Wings of seeds repandly sinuated, nerved.
2670. *Sirobilánthes.* Calyx 5-parted. Corolla funnel-shaped. Anthers erect, with parallel cells. Capsule 4-seeded in the middle. Seeds small.
2671. *Goldfússia.* Calyx 5-parted. Corolla funnel-shaped. Limb nearly equal. Anthers erect, 2-celled. Stigma subulate, crenulate on one side. Capsule 6-angled, 2-valved. Cells 2-seeded at bottom. Seeds discoid.
2672. *Calóphanes.* Calyx 5-parted, equal. Corolla funnel-shaped. Throat ventricose. Limb bilobed, nearly equal. Stamens enclosed. Cells of anthers parallel, spurred at the base. Stigmas simple. Cells of ovarium 2-seeded. Capsules sessile, almost cylindrical.
2673. *Amasónia.* Calyx 5-cleft, bracteate. Bracteas coloured. Corolla tubular, 5-cleft, equal. Style bifid. Drupe 2-4-seeded.
2674. *Geissomèria.* Calyx 5-parted. Sepals glumaceous, equal. Corolla tubular, clavate. Limb nearly equal, lower segment bearded. Cells of anthers parallel, hairy at apex. Ovarium 2-celled. Cells 2-seeded. Stigma funnel-shaped.
2675. *Chloánthes.* Calyx 5-cleft. Corolla tubular; upper lip bifid, lower one tripartite. Stamens exserted. Stigma bifid. Drupe containing 3 nuts.
2676. *Lophospérmum.* Corolla bilabiate. Tube wide, gibbous at base. Capsule dehiscing irregularly under the apex.
2677. *Seymèria.* Calyx deeply 5-cleft. Corolla with a short tube, and a subrotate spreading limb. Stamens a little longer than the corolla. Cells of anthers nearly equal.
2678. *Diplacus.* Calyx prismatic, 5-cleft. Corolla ringent, 5-cleft. Lobes emarginate. Stigma bilamellate. Capsule 2-celled. Placenta broad. Seeds subulated at both ends.
2679. *Torènia.* Calyx plicate, obliquely 5-toothed. Two lower filaments appendiculate, or gibbous at base.
2680. *Collínsia.* Corolla gibbous above the base. Limb very irregular. Capsule 2-valved. Valves bipartite.
2681. *Franciscea.* Calyx 5-toothed. Corolla salver-shaped. Stigma 2-lobed. Capsule 2-celled; dissepiment parallel with the valves, separating from the parietes at the base.

17557 Lvs. petiol. ov. bluntish crenat. little rounded at base, Whorls loose subsecund, Cymes pedunc. Cal. teeth acute

17558 Lvs. ellipt.-lanceol. coarsely serrated, Spikes panicled 4-gonal, Flws. erect densely imbricat. Upper lip of cor. [concave
17559 Calyx truncate obscurely 3-5-lobed, Lobes very broad denticulated

17560 Lvs. petiol. broad-ov. crenat. rounded at base or cuneat. very thick hispid or clothed with white villi, Whorls remote 20-30-flwd.

17561 Bran. pubes. Lvs. sess. lin. lanceol. acute quite ent. with subrevolute edges, Flor. lvs. exceeding flws. Cal. ciliated

ANGIOSPERMIA.

17562 Pubesc. Lvs. falsely verticill. 4-5-6 rarely oppos. ov. acute crenately toothed, Cyme termin. Hypogynous glands twin behind

and Miscellaneous Particulars.

2656. *Micromeria* is a genus of plants which thrive, during the summer, on rockwork, but require the protection of a frame in winter.

2657. *Gardoquia*. The species are well deserving of cultivation; they thrive in a mixture of sand, loam, and peat, and cuttings root readily in sand, under a hand-glass.

2658. *Physostegia*. Elegant plants of easy culture, well adapted to the flower border. They may be readily increased by division of the root, and will thrive in common garden soil.

2659. *Cŏleus*. A mixture of peat and loam suits this plant, and cuttings root readily in sand, in a gentle heat.

2660. *Chilŏdia*. For propagation and culture see Cŏleus, above.

1290. *Gésnera*. Very showy plants while in flower. A light rich soil, or a mixture of loam, peat, and sand, suits them. Most of the species increase readily by cuttings, and by tubers of the root. While dormant, they require to be kept dry.

17572 Bran. subtetragonal and pilose, Lvs. oppos. ov.-acute obliquely cord. at base crenat. blistered ab. pubes. ben. Ovarium girded by yellow ring [twin, Hypog. gl. hairy
17573 Bran. very hairy, Lvs. oppos. obl.-ov. acumin. rounded at base pilose ab. toment. ben. Pedun. axill. 1-flwd.
17574 Stem terete toment. Lvs. ov. cord. crenat. toment. Pedun. axill. solit. 1-flwd. Upper lip of cor. oblong undulated lower small revolute [bifid erect lower one small and reflexed
17575 Pubescently tomentose, Lvs. oppos. cord.-ovate crenate-serrate, Panicle termin. Upper lip of cor. very long
17576 Lvs. petiolate roundish ovate cord. crenate hairy axillary, Flws. solitary terminal ones twin stem-clasping, Upper lip of corolla obl. concave

17577 Lvs. ellipt. acuminat. glabr. Pedun. usually 4-flwd. Cal. segms. subul. elongat. Cor. cylindric. incurved

17578 Lvs. broadly lanceol. somewhat obliquely falcate crenate-serrate sessile auricul. at base very wrinkled and bullate ab. beautifully reticul. ben.

17579 Lvs. glabrous cordate-ovate serrated ciliated, Cal. turbinate twice as long as ovarium [as ovarium
17580 Lvs. obl.-lanceol. atten. at base pubes. lucid serrat. Cor. spotted, Cal. cylindrically campanul. 3 times as long
17581 Leaves oblong subcordate velvety, Cal. cylindrically-campanul. 3 times as long as ovarium
17582 Stem and leaves villous, Cal. 5-parted length of ovarium, Flowers aggregate

ε pállida máxima ζ Menziésii z violácea
17583 Lvs. ov. crenat. obt. toment. edges revolute, Pedun. axill. elongat. Cor. downy, Segms. nrly. equal middle one cord.-ov. all undul.
17584 Stemless very hairy, Lvs. ov.-roundish wrinkled hispid rath. cord. at base, Scapes and pedunc. aggreg. 1-flwd. Cor. funnel-sh.

17585 Lfts. oppos. on short pets. 3-4 pairs lanceol. acumin. unequal at base dentately serrated

17586 The only species

17587 Glabr. Bran. terete, Lfts. 9 ovate serrat. bearded in axils of veins ben. Rac. termin. on long pedunc. Limb of cor. 4-parted

17588 Clthd. with glandul. hairs, Lower lvs. petiol. ellipt. obl. sinuat. upper sess. lanceol.-lin. ent. Bran. dichotom. Filam. glandul. pilose
β Corolla elegantly variegated with yellow and bluish purple
γ Corolla cream-coloured veined with blue
δ Corolla striped with brown and yellow

17589 Lvs. 2 pairs of pinnæ, Lfts. altern. obliquely cord. ovate serrat. or ent. Stems angul. clthd. with short stiff pellucid hairs when young, Cor. hairy

and Miscellaneous Particulars.

2667. *Salpiglóssis.* A genus of very showy handsome plants, which succeed well if sown in the open border early in spring, or they may be sown in autumn, if preserved in the green-house or frame during winter, where they will require a free admission of air and light.

2668. *Calámpelis* 17589 *scábra* is a beautiful climber, generally raised from seeds in spring, on a hot-bed. The plants succeed well if trained in a conservatory, or in the open ground against a wall or house with a south exposure.

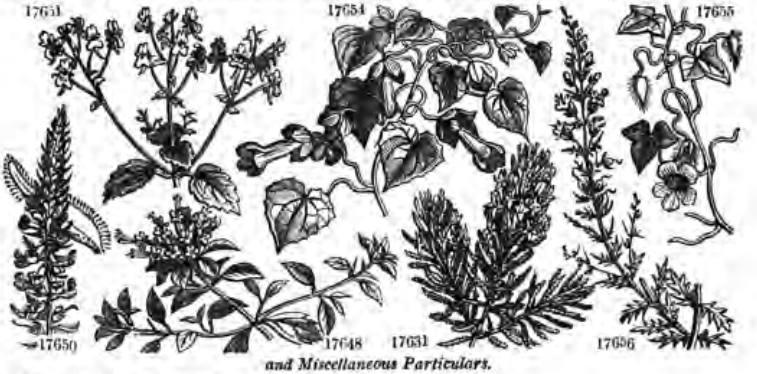
17639 Ascend. branched, Branches hairy, Lvs. 3-partite pinnatifid, Corymbs terminal, Calyx elongated

17640 Ascend. hispid, Lvs. obl. acute serrated upper ones almost entire, Corymbs terminal, Calyx elongated, Segms. of cor. cun. emarg. [cun. emarg.
17641 Erect pubesc. Lvs. ovate lanceol. acumin. coarsely serrated, Corymbs spiked, Calyx elongated, Segms. of cor.
17642 Erect pubesc. Lvs. cord. obl. pinnatifid upper ones lanceol. Corymbs terminal, Calyx elongated, Segms. of cor. cun. bifid
17643 Erect hairy, Lvs. cord. obl. serrated. Spikes dense short, Cor. hairy, Segms. cun. emarginate
17644 Erect branched, Lvs. pinnatifid scabrous, Spikes filif. panicled, Pedunc. and calyx covered with glandul. hairs

17645 Prostrate hairy, Lvs. multifid, Segms. narrow ciliated, Spikes capitate, Flws. tetrand. Cor. pubesc. Segms. emar.
17646 Erect hispid, Stem acutely tetragonal, Lvs. obl. lanceol. sessile subcordate coarsely serrated, Spikes panicled

17647 Erect branched pilose, Lvs. obl. or lanceol. sessile deeply cut, Spikes elevated, Calyx elevated



17648 Lvs opposite alternate ovate acute entire or serrated, Corymbs terminal. Tube of cor. slender, Calyx 5-toothed
17649 Pubesc. Lvs. obl. lanceol. acumin. entire, Pedun. axil. 3-fid, Tube of cor. short, Calyx 5-toothed

17650 Covered with glandular pili, Lvs. ovate lanceol. Raceme dense leafy, Lobes of calyx lin. lanceol. unequal

17651 Erect nearly glabrous, Lvs. ovate serrated lower ones petiolate upper ones nearly sessile, Spur bluntish equal in length to lower lip of cor. [or deeply serrat. Pedic. vill. bractless
17652 Bran. clthd. with articul. short viscid hairs, Lvs. cord. more or less distinctly 5-lbd. downy, Lbs. mucron. crenat.
17653 Lvs. cordate acuminated dply. serrated hairy 5-nrvd. Pedunc. bractless, Stem herbaceous, Flws. pendulous
17654 Lvs. cordate acuminated coarsely and dentately serrated, Cal. semiquinquefid spreading, Cor. tubular, Filam. simple

17655 Lvs. cordate acuminated young ones somewhat hastate, Cal. segms. lin.-lanceol. very acute clthd. with glandular hairs

17656 Downy, Lvs. pinnatifid with linear obtuse rather cut segments, Capsule downy obtuse

and Miscellaneous Particulars.

History, Use, Propagation, Culture.

2678. *Diplacus*. See *Mimulus* for propagation and culture,
2679. *Torénia*. The species require a moist soil. They are readily increased by division.
2680. *Collínsia*. All the species are very desirable showy annual plants, and have a good appearance if sown in large patches

17657 Plant downy, Lvs. sess. obl.-lanceol. acute urvd. mucron. denticul. Flws. few termin. on very long pedics. Cal. acuminated
17658 Villous, Lvs. amplexic. ovate with erosely toothed margins, Pedunc. long th. lvs. Cal. large inflately tubul. hardly plicate with ov.-acute teeth
17659 Pubescent, Lvs. amplexic. obl. little-toothed 5-nerved, Pedunc. shorter th. lvs. Cal. large subinflat. tubul. with ov.-acute nrly. eq. teeth
β Caulescent many-flowered
γ Flowers yellow spotted with purple
δ Decumbent, deep yellow, Segms. of limb with a large blood-coloured spot on each
ε Stem erect, Corolla pale yellow, each segment stained with a large purple spot
17660 Clothed with glandular pubesc. Stems decumb. round, Lvs. ovate toothed upper ones sessile, Peduncles axil-
17661 Hybrid, *M.* variegàtus and *M.* lùteus rivulāris [lary 1-flwd. shorter than lvs.
17662 Hybrid between *M.* rōseus and *M.* cardinālis
17663 Diffuse clthd. with woolly villi, Lvs. petiol. ovate or ov.-lanceol. little-toothed rounded at base rath. pilose and clammy, Cal. teeth uneq. lanceol. [very short acute
17664 Diffuse loosely pilose clammy, Lvs. petiol. broad-ovate little-toothed truncate at base or rounded, Cal. teeth

17665 Clammy glabrous, Lvs. lanceol. serrul. rather connate at base, Segms. of cal. unequal

17666 Lvs. lanceol.-ovate serrated scabrous, Stem erect pubescent, Calyx 5-toothed equal
17667 Lvs. ovate-cord. Pedunc. axill. subfascicled or solitary, Cor. about twice length of cal. which is ovate and rounded at base

17668 Branches tetragonal erect rushy, Lvs. small ovate, Peduncles filif. generally 2-flwd.

17669 Lvs. lanceol. Pedicels axill. solit. much long. th. flws. Cal. downy about equal in length to corolla
17670 Lvs. ov.-obl. nrly. ent. downy, Pedic axill. solit. much long th. flws. Segms. of cor. acutish entire, Cal. downy
17671 Diffuse, Lvs. all oppos. Flws. solitary, Pedicels little longer than calyx, Capsule globose [about eq. to cor.
17672 Lower lvs. spatulate, upper ones oblong-linear, Pedic. verticill. shorter than flws. Cor. segms. dilated retuse, Cal. glabr. ½ length of cor.
17673 Erect downy, Lvs. glabr. ov.-lanceol. subcordate at base, Pedicels verticillate racemose
17674 Lower lvs. 3-lobed upper ones ov. Cal. clth. with glandular pubesc. Segms. of cor. crenated at apex

17675 Bran. diffuse spreading, Lvs. ellipt. acute, Bract. lanceol. glabrous as are calyxes, Flws. solitary

---

2683. *Schiereckia.* Silicle ovate; valves convex, somewhat depressed lengthwise in the middle. Seeds numerous. Calyx equal at base. Petals entire. Larger stamens toothed.

17676 Lvs. elliptic very obtuse dply. 2-lobed at base amplexicaul, Petals obov. on long and at length twisted claws, Filam. short subul. [abortive linear anther
17677 Lvs. oblong-linear acumin. Petals linear with reflex. limb, Filam. combined forked at apex bearing each an

17678 Pedicels shorter than the calyx, Lvs. oblong entire or toothed hispid with stellate down

17679 The only species

and Miscellaneous Particulars.

2681. *Franciscea.* For cultivation, &c., see Brunsfelsia, in p. 534.
2682. *Streptanthus.* This genus requires the usual treatment of other hardy annuals.
2683. *Schiereckia* 17679 *podolica* is a very pretty little rock plant, and thrives well if grown in a small pot in light sandy soil.

Page 560. CLASS XVI. — MONADELPHIA.

Order 1. TRIANDRIA. Stamens 3.

2684. *Orthrosánthes.* Spathe many-flowered, 2-valved. Perianth 6-parted, equal, with a short triangular tube. Stamens 3, combined at the base. Stigmas 3, fringed at top. Capsule oblong, trigonal, many-seeded.

2685. *Cypélla.* Spathe 2-leaved. Perianth 6-parted, concave at the base; outer segments large, spreading; inner ones small, convolute, reflexed at apex. Stamens 3, monadelphous. Style slender. Stigma 3-lobed, the lobes 3-fid and appendiculate. Capsule oblong, 3-celled, 3-valved, many-seeded. Seeds angular.

2686. *Herbértia.* Perianth 6-parted, tube very short, 3 outer segments much smaller than the inner ones. Stamens 3, monadelphous. Anthers linear. Stigmas 3, bifid. Capsule oblong, 3-celled, many-seeded. Seeds angular.

2687. *Spatalánthus.* Spathe rigid, 2-valved, 1-flowered. Perianth spreading, with a very short tube, and a 6-parted regular limb. Stamens 3, short, monadelphous. Anthers oblong, sagittate. Ovarium warted at apex. Stigmas 3, bifurcate.

2688. *Homéria.* Perianth 6-parted, alternate segments smaller, tube very short. Stamens 3, monadelphous. Stigmas 3-fid, the segments bifid and fringed.

Order 2. PENTANDRIA. Stamens 5.

2689. *Mahérnia.* Cal. naked, campanulate, 5-cleft. Petals 5, with an obcordate limb, spirally twisted, and straightish claws. Filaments monadelphous at base, dilated into a cordate tubercle, or a cup-formed process in the middle. Styles 5, sometimes joined into 1. Capsule 5-celled, 5-valved, many-seeded.

2690. *Malvaviscus.* Cal. tubular, membranous, inflated, 5-lobed. Filaments filiform, distinct, or connected with the stipe of the ovarium. Anthers versatile. Ovarium superior, stipitate, 1-celled, with the placentas at the base, from which the ovules arise by the intervention of umbilical cords. Styles 3, filiform. Stigmas clavate. Fruit capsular, 1-celled, 3-valved. Testa crustaceous, brittle, with a fleshy crest and no arillus. Embryo round, in the centre of fleshy albumen, with the radicle next the hilum.

2691. *Clintónia.* Limb of cal. 5-cleft. Cor. bilabiate, with hardly any tube. Anthers cohering; 2 superior ones bearded. Capsule silique-formed, triangular, dehiscing by 3 loriform valves, many-seeded. Seeds attached to two parietal placentas.

Order 6. DODECANDRIA. Stamens 12.

2692. *Philothéca.* Cal. 5-parted. Petals 5, unguiculate. Stamens 10, unequal, connate at base, with tube smooth and free, part of the filaments hairy. Fruit of 5 1 seeded carpels. Leaves alternate, linear.

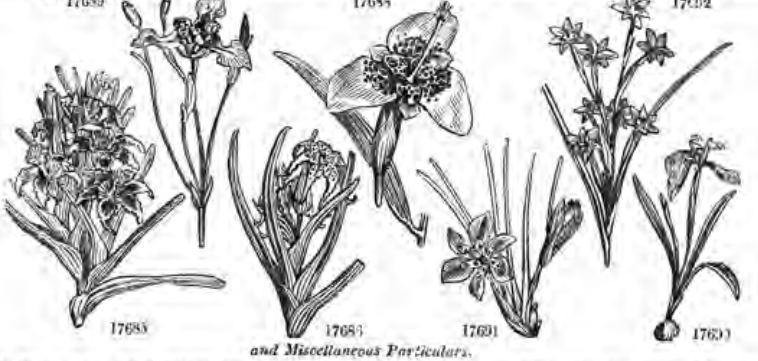
17683 Unarmed, Lflts. 5-7 lanceol. acuminated pilose, Brac. ovate, Petals length of pedicels, Pedicel of fruit long

---



2693. *Omphalobium.* Cal. 5-parted. Petals 5, imbricate in æstivation. Stamens monadelphous, or somewhat polyadelphous at base. Carpels 5, each bearing a style. Capsules 1-5, legume-formed, 2-valved, dehiscent. Seeds twin, or solitary, exalbuminous. Leaves trifoliate, or impari-pinnate.
2694. *Párkia.* Flowers hermaphrodite. Calyx tubular, bilabiate, imbricate in æstivation. Legume compressed, many-seeded. Seeds covered with farinaceous substance.
2695. *Sarcocaulon.* Sepals 5, equal. Petals 4, equal. Stamens 15, monadelphous at base.
2696. *Montezúma.* Calyx hemispherical, truncate, sinuately toothed. Stamens numerous, twisted around the style, monadelphous, with 5 distinct furrows. Capsules globose, 4-5-celled. Cells many-seeded. Leaves entire.
2697. *Assónia.* Calyx girded by a 3-crenate 6-leaved involucel. Antheriferous filaments 15; 3 fertile between each sterile one. Styles 5, very short. Carpels 5, 2- seeded, closely connected into a single capsule. Seeds rather triquetrous, not winged.
2698. *Plagiánthus.* Calyx 5-cleft. Petals 5, 2 of which are approximate, remote from the rest. Stigma clavate.
2699. *Nuttállia.* Cal. naked, 5-cleft. Anth. numerous. Stig. numerous, filiform. Carp. numerous, disposed into a ring, or whorl; 1-seeded, not opening spontaneously.
2700. *Lebretónia.* Cal. 5-parted, girded by a shorter 5-parted involucel. Petals 5, exserted in part, twisted in æstivation, with a spreading limb. Styles 10. Carp. 5, or only 4 from abortion, 1-seeded, indehiscent.
2701. Abútilon. Cal. naked, 5-cleft, usually angular. Styles multifid at apex. Carp. capsular, 5-30, many-seeded, usually bladdery, disposed into a whorl around the axis, so closely connected with each other as to form a many-celled capsule.
2702. *Eriolæ'na.* Cal. tomentose, girded by a 5-leaved involucel. Leaflets jagged, 3 inner ones largest, all shorter than the calyx. Petals unguiculate. Stam. disposed in many series, monadelphous, outer ones shortest, all fertile. Style solitary, villous, crowned by numerous aggregate small stigmas.
2703. *Recrédia.* Flowers hermaphrodite. Stams. monadelphous. Anth. 15, sessile on the top of the tube. Caps. stipitate, 5-celled, 5-valved. Cells 2-seeded. Seeds winged at base.
2704. Stravádium. Limb of calyx 4-parted. Ovarium semilocular. Cells 2-ovulate. Otherwise agreeing with Barringtónia, in p. 561.
2705. *Morisónia.* Cal. obovate, bifid. Petals 4. Stams. 20, somewhat monadelphous at base? Berry stipitate, 4-lobose.

17713 Stem flaccid simple, Lvs. renif. 7-lbd. Lbs. trifid, Lobules 3-toothed, Pedun. elongat. hispid as are cals. Carpels crested

17714 Leaves very numerous linear somewhat imbricate convex beneath, Pedicels axillary

and Miscellaneous Particulars.

2690. *Malesherbia* is a genus of singular and ornamental plants, at present somewhat rare in collections, but nevertheless well deserving cultivation.

2691. *Clintonia* is a genus of tender annuals, and requires the treatment of such. The flowers are elegant; but the plants are very thinly clothed with foliage.

2692. *Philotheca*. The soil most suitable to this genus is a mixture of sandy loam and peat, and the plants require to be placed in an airy situation, and not crowded amongst other plants. Cuttings root freely in sand, under a bell-glass.

History, Use, Propagation, Culture,

2693. *Omphalòbium.* For soil and propagation, see Philothèca, above.

2694. *Párkia.* The species of this genus may be increased by cuttings of the young wood, planted in sand under a bell-glass, in heat. "In Soudan the seeds of *P. africâna* are roasted as we roast coffee, then bruised, and allowed to ferment in water; when they begin to become putrid they are well washed and pounded, the powder made into cakes somewhat in the manner of our chocolate. They form an excellent sauce for all kinds of food. The farinaceous matter surrounding the seeds is made into a kind of sweetmeat." (*Don's Mill.*, 2. 396.)

2695. *Sarcocáulon* is a genus of curious spiny shrubs, which bear beautiful large flowers. They may be increased by cuttings and slips of the roots, in good soil, under a bell-glass.

2696. *Montezùma* 17718 *speciosissima* is a very showy tree, thriving in a mixture of loam and peat. Full-grown cuttings (not too old) will root freely in sand, under a bell-glass, in a moist heat.

2697. *Assònia.* A light rich soil, or a mixture of loam and peat, suits this genus; and young cuttings root freely, under a hand glass, in heat.

17715 Lflts. 3 oval acuminated smooth on both surfs. somewh. membran. and feather-nrvd. Flws. panicled, Carpels solit. stipitate

and Miscellaneous Particulars.

2698. *Plagiánthus.* A shrub which, if planted in a warm sheltered situation, will stand our winters; and cuttings of young wood root freely in sand under a hand-glass.

2699. *Nuttállia* is a genus of very elegant plants when in blossom, well deserving a place in every collection. Peat with a little sand suits them best. They may be increased by division or by seed.

1477. Urèna 17726 *speciòsa.* "This is a very elegant plant, with large pink flowers, which are disposed in a kind of terminal racemose panicle. It differs so much in habit from all the other species of this genus, that we doubt its being a genuine species of *Urèna.*" (*Don's Mill.*, i. 47.)

2700. *Lebretónia.* The species of this genus deserve to be cultivated in every collection, on account of their showy scarlet blossoms. A mixture of loam and peat suits them best. Cuttings taken off close to the stem of the plant root readily in sand under a hand-glass. None of the leaves should be taken off, or shortened above the sand.

2701. Abútilon. Some of the species of this genus are rather ornamental when in flower. They thrive in any light rich soil, and are readily increased by cuttings, which should be placed in a gentle heat.

17741 Lvs. cuneate-obl. acuminat. obsoletely serrulated, Rac. very long pendulous, Drupe acutely 4-angled

17742 The only species

2710. *Vilmorînia.* Cal. cylindrical, 4-toothed, somewhat bilabiate. Wings shorter than the keel. Style acute. Legume stalked, lanceolate, compressed, tapering.
2711. *Barbièria.* Cal. tubular, 5-cleft, bibracteate at base. Wings shorter than keel, and keel shorter than vexillum. Style bearded at apex. Stigma obtuse. Legume linear, villous, many-seeded.
2712. *Dumâsia.* Cal. obliquely truncate, toothless, bibracteate at base. Claws of petals length of calyx. Keel obtuse. Legume tapering to the base, compressed, few-seeded.
2713. *Neurocârpum.* Cal. tubular, with 5 acuminated nearly equal teeth, and furnished with 2 bracteas at base. Vexillum large, roundish. Keel obtuse. Legume stipitate, compressed, sub-tetragonal from the middle nerve of the valves being rather prominent; 4-8-seeded.
2714. *Cologânia.* Cal. tubular, 5-cleft, bibracteate at base, somewhat bilabiate. Vexillum roundish. Ovary stipitate, linear, very hispid, girded by the disk. Style smooth, obtuse.
2715. *Clianthus.* Calyx campanulate, 5-toothed, 5-cleft. Vexillum ovate-lanceolate, acuminate, rather short, the keel reflexed. Wings lanceolate, spreading. Keel cymbiform. Anthers incumbent. Style filiform. Stigma truncate. Legume oblong, swollen, coriaceous.
2716. *Adêmia.* Cal. 5-cleft; lobes acute. Vexillum complicated above the wings when young. Keel curved and truncate at base. Stams. distinct, but approximate. Legume compressed, many-jointed.
2717. *Hosâckia.* Cal. campanulate, 5-cleft. Wings equal in length to vexillum. Keel beaked. Stigma capitate. Legume cylindrical, or rather compressed, straight.

OCTANDRIA.

17743 Stems many erect, Lvs. obl.-lin. crowded, Rac. 8-12-flwd. Capsule somewhat 2-horned at apex
17744 Lvs. narrow tapering to both ends acute and as well as twigs smooth, Rac. elongat. Brac. decid. Peduncles longer than flws. Wings obtuse

and Miscellaneous Particulars.

2704. Stravâdium. For culture, &c., see Barringtônia, in p. 597.
2705. *Morisônia* 17742 *americâna.* A mixture of loam, peat, and sand suits this plant; and cuttings of the young wood should be planted in sand, and placed under a hand-glass in heat. It is called in Martinique *Bois Mabonia.*

History, Use, Propagation, Culture,

2706. *Monnina*. A genus of plants not worth cultivation for ornament. A mixture of loam and peat suits them; and cuttings of the young wood root readily in sand, under a hand-glass, in heat.

2707. *Amhérstia* 17746 *nóbilis* is a native of the Burman empire, in the garden of a decayed kioun, a sort of monastery, 2 miles from the right bank of the Salven river, and 27 miles from the town of Martaban, but its native place of growth is still unknown, as the trees found in the garden have undoubtedly been planted there. The flowers are large, of a fine vermillion colour, diversified with yellow spots. This tree, when in foliage and blossom, is the most superb object that can possibly be imagined, and not surpassed by any plant in the world. The Burmese name of the tree is *Thoka*.

17745 Lvs. oblong obtuse cuneate at base obsoletely veined rather leathery glabrous as are branchlets, Rac. solitary

DECANDRIA.

17746 The only species

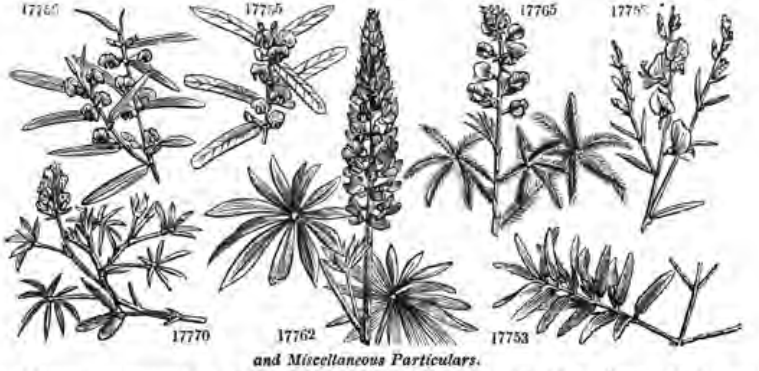
17747 Stem suffrutic. bran. Bran. glabr. rather prickly, Lflts. petiol. obl. acumin. Petioles rath. prickly glandul. Cal. truncate unident.

17748 Bran. smooth glabrous, Lvs. ovate-oblong glabrous acuminated, Racemes pedunculate

[3 or 4 brown concave bracteas

17749 Lvs. oppos. rather remote deltoid subcoriac. angles rath. obt. and mucronate, Pedunc. very short concealed by
17750 Much branched, Bran. erect flexuous somewh. wiry, Lvs. deltoid angles acute and mucron. Pedun. filif. longer th. lf. with about 6 small distich. bract. at base

17751 The only species



17752 Stipules wanting, Lflts. ellipt. obt. mucron. nrly. glabr. Rac. termin. and nrly. oppos. lvs. Bract. setaceous deciduous

17753 Leaves opposite lin.-oblong truncate at base, Flws. solitary on very short pedicels
17754 Lvs. ovate truncate at base unequally denticulated, Branches smooth

17755 Lvs. linear obl. obtuse mucronulate glabr. reticulated above very villous beneath as well as branches, Pedicels twice shorter than petioles villous
17756 Lvs. linear mucron. with revolute margins glabr. above pilose beneath, Flowers twin sess.

17757 Lvs. acumin. Racemes loose

17758 Flws. altern. pedicell. bracteol. Upper lip of cal. bipartite lower trifid, Stip. ov. lanceol. Lflts. 5-6 obov.-obl. vill. on both surfs. [as are stems and pets. Leg. very hairy
17759 Flws. altern. without bracteoles, Upper lip of cal. bipart. lower ent. Lflts. 5-7 lin.-ellipt. glabr. ab. hairy ben.
17760 Clthd. with silky pili, Lflts. 5-7 lin. spatulate, Flws. few verticill. Upper lip of cal. bifid lower elongat. and ent. Wings longer than vexillum [6-seeded transversely furrowed
17761 Flws. somewh. verticill. bracteol. sess. Upper lip of cal. bifid lower ent. Lflts. 5-7 lin. spatulate ciliat. Leg.
17762 Flws. rath. verticill. without bracteoles pedicill. Lflts. 11-15 lanceol. hairy ben. Both lips of cal. quite entire, Stems pilose [Vexillum sessile
17763 Silky, Leaflets 7 pubes. beneath, Racemes verticillate, Cal. bractless, Lips entire upper one gibbous at the base,
17764 Hairy leaflets 12-15 lanceol. acute, Whorls many-flwd. contiguous, Cal. bractless, Lips entire, lower one lanceol. acute
17765 Pilose, Flws. altern. without bracteol. Upper lip of cal. ent. saccate at base lower longer ov. and acumin. Keel beardless, Lflts. 7-9 lin.-lanceol. [lanceol. silky on both surfs.
17766 Flws. altern. pedicell. without bracteol. Cal. villous upper lip bipart. lower acumin. and elongat. Lflts. 5-7
17767 Flws. verticill. appendicul. Upper lip of cal. bifid, lower ent. elongat. Lflts. 7-12 lin.-lanceol. clthd. with silvery silky down, Leg. 4-5-seeded [slender racemes
17768 Stem and lvs. clthd. with silvery silky down, Lflts. obovato-oblong narrowed at base, Flws. verticill. in long
17769 Flws. verticill. pedic. without brac. Lips of cal. ent. Lflts. 5-7 lin. spatulate silky both surfs. Leg. 10-12-seeded transversely furrowed [Stipules subulate
17770 Very hairy, Flws. verticill. pedicell. bracteol. Upper lip of cal. bifid lower ent. Lflts. 5-9 lin.-lanceol. villous,
17771 Very villous, Flws. altern. on short pedic. bracteol. Upper lip of cal. bifid lower ent. Lflts. 5-7 lanceol. silky, Leg. glabr. 3-5-seeded

and Miscellaneous Particulars.

Handfuls of flowers were presented as offerings in the cave before the images of Buddha. Along with this tree were found some trees of Mesŭa *férrea* and *Jonésia* Asŏca. It is not a little remarkable, that the priests of these parts should have manifested so good a taste as to select three sorts of trees, as ornaments to their objects of worship, which can hardly be surpassed in beauty. A light loamy soil suits this tree; and large cuttings root in sand, under a hand-glass, in heat.

2709. *Lăgăge* 17751 *ornăto* is a very gay flowering shrub, which requires to be kept in a well-aired green-house, in peat soil, and may be multiplied by cuttings.

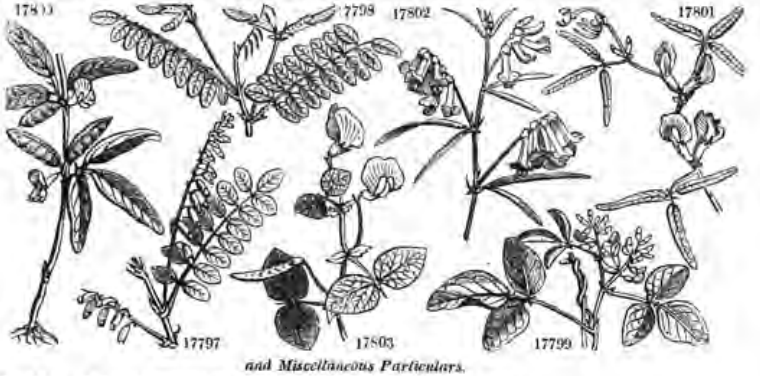
17777 Flws. altern. pedicell. bracteol. Upper lip of cal. bifid lower one ent. acute, Lflts. 7-13 obov.-obl. silky on both surfs. Leg. 3-4-seeded [villi
17778 Flws. altern. almost sess. bracteol. Upper lip of cal. bifid lower tridentate, Lflts. lanceol. covered with silky
17779 Silky, Lvs. digit. Lflts. about 9 lin.-lanceol. carin. below ent. very acute, Pedic. scatt. over rachis or within a little way of base, Brac. small subul. adpress. inconspic. [Upper lip of cal. bifid lower keeled acute ent.
17780 Bran. spreadg. glauc. glabr. Lflts. 7-9 glauces. rath. pubes. ben. lanceol. bluntish, Flws. somewh. verticill.
17781 Clthd. with silky toment. Flws. altern. pedicell. bracteol. Cal. appendicul. Upper lip bifid lower ent. and acumin. Lflts. 8-9 lin. canalicul. obt. [caducous sprdg. silky ciliat. long. th. silky cal.
17782 Bran. and lvs. pubes. Lflts. 7-9 lanceol.-spatul. bluntish somewh. smthish. ab. pubes. ben. Bract.
17783 Bran. erect clthd. with silky pubes. Lflts. 5-7 obl.-lanceol. acute mucron. pubes. ben. Stip setaceous, Rac. peduncul. Flws. verticill. Brac. caducous and setaceous
17784 Bran. angul. clthd. adpress. pubes. Lflts. 9 lin. acute few silky hairs on both surfs. Stip. foliac. lin. Flws. in lax peduncul. racemes somewh. verticill. Lips of cal. ent.
17785 Sarmentose and hoary, Flws. somewh. verticill. tern. pedicel. bracteolate. Vexillum bicallous at base
17786 Clthd. with silky toment. Flws. verticill. pedicell. bracteol. Both lips of cal. ent. Lflts. 8-10 obl. bluntish mucronul. tapering to base, Ovary very hairy [lanceol. acute, Brac. long and slend. extending beyond flws.
17787 Clthd. with soft woolly and silky hairs, Lower lvs. of 9-14 lflts. upper ones 8-5 lflts. Lflts. varying from ellipt. to
17788 Pilose, Stipules setaceous, Lflts. 7-9 obl. obtuse, Raceme elong. many-flwd. Bracteas setaceous plumose, Keel
17789 Lvs. of 7-9 oblongo-spathul. lflts. Whorls 6-10-flowered, Legume villous 2-seeded [beardless
17790 Glabr. Lflts. 5-7 obov. narrowed at base, Whorls few-flwd. Cal. bractless silky, Lips nearly entire
17791 Stem downy, Lvs. on long pets. of five obov.-lanceol. singularly thick and alm. fleshy retuse lflts. Lflts. of lower lvs. shortest and broadest glabr. ab. somewh. silky ben.
17792 Lvs. of 5 lanceol. acute lflts. very smooth ab. silky ben. Stip. subulate, Lower lip of cal. always entire

[straight, Vexill. remarkably retrofracted
17793 Lvs. broadly ov. almost cord. at base retuse at apex sometimes tern. Flws. erect secund racemose, Keel nearly
17794 Villous, Leaflets 3 obl. obtuse undulated, Stipules and bracteas cord. Pedunc. 4-flwd.
17795 Leaflets 3 roundish ov. mucron. almost glabr. Petioles and stems pilose, Stipules ovate acute, Bracteas in
17796 Leaflets 3 ovate obl. retuse mucron. Stip. setaceous, Racemes many-flwd. [fascicles or whorled, Pedun. 2-flwd.

17797 Stem erect glabr. Lvs. pinnate with 5 or 6 pairs of ovate lflts. which are pubes. beneath, Racemes shorter than leaves

17798 The only species



17799 Branches petioles peduncles and leaves pubescent, Lflts. ovate, Legume 4 times longer than calyx

17800 Stem erect shrubby, Lvs. sess. trifoliate, Lflts. obl. obt. and somewh. mucron. pubes. as are brans. Flws. 2-3 on very short peduncles

17801 Twining, Lflts. linear obtuse rather strigose on both surfaces, Calyx covered with hispid pili

17802 Stem tetragonal alm. simple, Lflts. lin. bluntish mucronul. rather silky ben. Stip. lin. acute little-toothed auricle at base, Flws. secund, Leg. 6-7-seeded [axill. about 2-flwd. Leg. lanceol. glabr
17803 Quite smooth, Lflts. ovate mucronul. Stip. small semisagitt. acute denticul. with diverging nrvs. Pedunc.
17804 Stem striat. or angul. Lvs. with 3 pairs of lin. acute lflts. Stip. semisagitt. very narrow awned, Pedun. many-flwd. Leg. compressed somewh. ellipt. [axill. and termin. few-flwd.
17805 Stem erect angul. bran. ab. Lvs. with 2-3 pairs of lin. attenuat. very long lflts. Stip. large semisagitt. Pedun.
17806 Leaflets 6 linear, Stipules broad sagitt. Pedun. 2-4-flwd.

[tate, Tendrils 3-fid, Pedunc. 3-7-flwd.
17807 Glabrous glaucous, Stems branch. 4-gonal, Lvs. with one pair of ovate obl. leaflets, Stipules broad cordate sagit.
†10371 Peduncs. many-fl. Tendrils 2-lvd. Leaflets roundish, Joints membranous

and Miscellaneous Particulars.

History, Use, Propagation, Culture.

2715. *Clíanthus* 17812 *puniceus* is a splendid half-hardy shrub, which well deserves a place in every collection. It is very readily increased by cuttings and by seed, and thrives in peat or any light rich soil. In New Zealand it is called *kowaia-gutukaka*, or the parrot's bill; and it is said to grow there to the size of a large tree.
2716. *Adésmia* is a genus of South American plants, some of which are shrubby; the appearance of several of them resembles that of Genista, and may be increased in the same manner.

17808 Glabr. or pubes. Lvs. with 4-6 pairs of ellipt. rarely ov. or obl. lflts. Stip. small semisagitt. lanceol. with lobe deflexed and about eq. in length to stips. [acute angularly toothed at base, Leg. convex narrow

History, Use, Propagation, Culture,

2719. *Candóllea*. Requires the same treatment as that recommended for Melaleùca, in p. 652.
2720. *Blumenbáchia* is a genus of ornamental annuals, and requires the usual treatment of such.

Page 660. CLASS XIX. — SYNGENESIA STAMENS 5. ANTHERS united by their edges.

Order 1. ÆQUALIS. Florets of the disk and ray all hermaphrodite.

2722. *Craspèdia*. Heads 5-flwd. homogamous, girded by bracteas seated on a cylindrical woolly rachis, receptacle narrow. Paleæ entire. Scales of involucrum membranous. Corollas tubular, 5-toothed. Anthers setiferous at the base. Achænia oblong, villous. Pappus in one series, composed of filiform plumose bristles.
2723. *Erythrolæ'na*. Involuc. conical; inner lvs. imbricated, outer ones reflexed, spiny-toothed. Receptacle convex, pilose. Flowers hermaphrodite, tubular, with a 5-parted limb and a 5-angled tube. Filaments glandular. Anthers bisetose at the base. Stigma bifid. Pappus sessile, plumose.
2724. *Aldmia*. Heads many-flwd. Involucrum campanulate, imbricate. Scales narrow, acute. Receptacle naked, convex. Tube of corolla slender, glabrous. Anthers terminated by obtuse appendages. Lobes of style elongated. Achænia 5-angled, naked at top.
2725. *Osothámnus*. Head 3-20-flowered, homogamous. Receptacle alveolate, usually naked. Involucrum imbricate. Scale scarious, obtuse. Corolla 3-toothed. Anthers bisetose at the base. Achænia obovate. Pappus in one series, composed of filiform scabrous bristles.

Order 2. SUPERFLUA. Florets of the disk hermaphrodite, of the ray female.

2726. *Leptostèlma*. Involuc. equal, hemispherical. Receptacle paleaceous. Flowers of the ray ligulate, female; those of the disk hermaphrodite, tubular, 5-toothed. Pappus capillary.
2727. *Adenotrichia*. Involucrum double, many-lvd.; outer lvs. squarrose, subulate, glandular. Flowers of the ray ligulate, almost entire, female; those of the disk tubular, filiform, hermaphrodite. Receptacle naked. Pappus pilose.
2728. *Diplopáppus*. Ray flowers in 1 series, female; those of the disk hemaphrodite, tubular. Pappus in 2 series. Corollas of the disk regular. Achænia beakless.
2729. *Brachyglóttis*. Heads 9-10-flowered, heterogamous. Ray flowers in 1 series, female, ligulate, shorter than the disk; disk flowers tubular, 5-toothed, hermaphrodite. Receptacle naked. Involucrum oblong, surrounded by 1 row of linear scales. Achænia oblong. Pappus in 1 series, composed of dense scabrous bristles, which are combined at the base.
2730. *Rhodánthe*. Heads many-flwd. Flowers hermaphrodite. Pappus in 1 series, hair-formed, plumose. Achænia beakless, woolly. Receptacle naked.
2731. *Diplúcoma*. Involucrum many-lvd. imbricated. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular. Achænia of the rays bald at the top; those of the disk pappose. Pappus double, unequal.
2732. *Nèja*. Involucrum many-lvd. imbricated. Receptacle pitted. Flowers of the ray female, ligulate; those of the disk hermaphrodite, tubular, 5-toothed. Achænia uniform. Pappus double; outer paleaceous, inner pilose.
2733. *Mutísia*. Involucrum many-lvd. imbricated. Receptacle naked. Flowers of the ray ligulate, female; those of the disk hermaphrodite, bilabiate. Filaments papillose. Anthers bisetose at the base. Achænia a little beaked. Pappus in many series, plumose.
2734. *Chætachlæ'na*. Heads many-flwd. heterogamous, ray-formed. Involucrum hemispherical, imbricate, with linear flat scales. Receptacle pilose or fringed. Ray flowers bilabiate; outer lip large, 3-toothed; inner one small, bipartite. Corollas of the disk tubular, 5-cleft, glabrous. Anthers bisetose at the base. Achænia beakless, somewhat compressed. Pappus in two series, setaceous, scabrous.
2735. *Lasthènia*. Head many-flowered, homogamous. Flowers of the ray female, tubular, obliquely truncate. Receptacle conical, papillose. Scales of involuc. in one series, combined into a toothed ciliated cup. Corolla short, with an inflated throat and a 5-toothed limb. Achænia compressed, pubescent. Pappus composed of 5-10-toothed paleæ.

17828 Leaves smooth obovately cuneated blunt at the top entire, Branches cinereous rough

17829 Lvs. altern. bipinnatifid, Lobes bluntish, Pedic. extra-axill. Lbs. of cal. lanceol.-linear acute shorter than petals
[hispid inciso-serrate, Pedun. spread. ab. half length of lvs.
17830 Clthd. with harsh barbed white hairs and a few stinging ones intersp. Lvs. scatter. petiol. spread. ov. acute
17831 Canescent, Lvs. oppos. palmate toothed, Cal. segms. long and linear, Outer appendages hatchet-formed awned
17832 Climbing, Lvs. cord. palmate lobed, Petals sessile keeled, Append. 3-lbd. truncate each furnished inside with
2 bristles, Caps. spiral ribbed

17833 Lower lvs. generally 7- but sometimes 5-lobed; upper ones deeply bipinnatifid
17834 Leaves palmate with bipinnatifid lobes, Flowers bibracteated, Petals hispid

17835 Stem dichotomous, Segments of leaves obtuse ciliated

and Miscellaneous Particulars.

2721. *Scyphánthus* is a twining annual, with somewhat curious inflorescence. It is said to have been lost soon after its introduction in 1827

2736. *Baèria*. Head many-flowered, heterogamous, radiate. Scales of involuc. about 10, flat, in 2 rows. Receptacle conical, naked. Flowers of the disk hermaphrodite, 5-toothed; those of the ray female, ligulate, fertile, in 1 series. Achænia fusiform, somewhat tetragonal, glabrous.

2737. *Eriophýllum*. Head many-flowered, radiate. Flowers of the ray female, ligulate. Flowers of the disk hermaphrodite, 5-toothed, glandular. Involuc. ovate, with 1-2 series of adpressed scales. Receptacle naked, or a little fringed. Achænia turbinate or linear, tetragonal, glabrous. Paleæ of pappus 4-8, oval or oblong, membranous.

2738. *Lagenóphora*. Head many-flowered, heterogamous. Flowers of the ray ligulate, female, in 1 series; those of disk tubular, 5-toothed, hermaphrodite, male. Receptacle flat, naked. Scales of involuc. in 2 series, acute, adpressed. Achænia of the rays compressed, oblong, beakless; those of the disk abortive.

2739. *Oxýbra*. Head many-flowered, radiate. Flowers of the ray 10-12, in 1 series, ligulate, female; those of the disk tubular, 5-toothed, hermaphrodite. Scales of involuc. in 1 series, convolute, each drawn out into lin. leafy appendage at top. Receptacle paleaceous. Branches of the styles of the disk flowers drawn out each into a hispid appendage. Achænia compressed, glabrous.

2740. *Cladánthus*. Heads many-flowered, heterogamous. Flowers of the ray ligulate, neuter; those of the disk tubular, hermaphrodite, 5-toothed. Receptacle conical, paleaceous, intermixed with threads. Scales of involucrum in 1 series, scarious at top. Achænia compressed, glabrous.

2741. *Eriócoma*. Involucrum few-lvd. Receptacle paleaceous. Paleæ cucul. mucronate. Flowers of the ray 4-10-ligulate, neuter; those of the disk hermaphrodite, 5-toothed. Achænia cuneated, glabrous at top, enclosed by the persistent paleæ.

2742. *Viguiera*. Heads many-flowered, heterogamous. Flowers of the ray neuter, ligulate; those of the disk hermaphrodite, 5-toothed. Involucrum semiglobose, scales nearly equal, each drawn out into leafy appendage at top. Receptacle paleaceous. Achænia compressed, obovate, pubescent, crowned by four lamellæ and two awns from the angles.

2743. *Calliópsis*. Heads many-flowered, heterogamous. Flowers of the ray neuter, in 1 series, ligulate, 3-5-toothed; those of the disk hermaphrodite, tubular, 5-toothed. Involucrum in 2-series, outer scales short, squarrose, inner ones large, erect, combined. Receptacle flat, paleaceous. Achænia compressed, glabrous, incurved, truncate, with a minute epigynous disk.

2744. *Plectocéphalus*. Involucrum globose, imbricate. Appendages to scales cartilaginous, pectinated. Receptacle clothed with setaceous paleæ. Flowers of the ray neuter, funnel-shaped, radiate; those of the disk hermaphrodite, tubular, quinquefid. Pappus uniform, pilose, scabrous, caducous.

Order 4. NECESSARIA. Florets of the ray female, of the disk male.

2745. *Mascària*. Involucrum 5-lvd. Receptacle paleaceous. Paleæ of two forms; outer paleæ cucul. gibbous at the base, and truncated at apex. Flowers all hermaphrodite, bilabiate, equal. Pappus paleaceous, very short.

2746. *Centroclinium*. Involucrum subglobose or cylindrical, imbricated. Flowers of the disk tubular, 5-toothed, deeply-cleft on one side; those of the ray 7-12 in number; bilabiate, inner lip very minute, bipartite; outer lip very long, 3-fid. Anthers biaristate, stigma entire. Pappus unequal, scabrous. Receptacle hispid.

History, Use, Propagation, Culture,

2722. *Craspèdia* is a genus of ornamental herbaceous plants, increased by division of the root and by seed, and thrives in good light loam.

2723. *Erythrolæ'na* 17837 *conspícua* is an ornamental biennial, and delights in a warm sheltered situation, planted in rich garden soil.

2724. *Alòmia.* A mixture of sand and loam suits this genus, and cuttings root readily in sand under a bell-glass.

ÆQUALIS.

17836 Lvs. oblong altern. gradually smaller upwards lower and root lvs. longest and broader upw. so as to be spathul. clthd. with appress. rather silky hairs

17837 The only species

17838 Lvs. opposite rhomb. lanceol. deeply serrat. upper ones sessile, Inflorese. fastigiate

17839 The only species

17840 Bran. downy erect slender virgate leafy, Lvs. lin.-lanceol. lowerm. 1½ to 2in. long acute passing into small scales clthd. with white toment. ben. Scales of involucre numer.

17841 Lvs. linear obtuse revolute on the margins clth. with cinereous cobwebbed tomentum, Corymb. panicled, Involucr. hemispher. woolly

17842 Lvs. linear mucron. with revolute margins cobwebbed and muricate above and tomentose beneath, Corymb terminal, Involucr. cobwebbed and rusty

SUPERFLUA.

17843 Stolones procumbent, Flower stems simple, Lvs. spatulate, Upper ones lin. tomentose on both surfaces but almost glabrous in an adult state, Corymbs terminal simple

17844 Lvs. lin. lanceol. acumin. obtuse at the base roughly ciliated upper ones subulate, Stem glabrous branch. Bract. of involucrum acute

17845 Receptacle conical pilose, Flowers of the disk bearded in the limb, Stems diffuse

17846 Stem erect corymbose many-flwd. glabrous Lvs. ciliat. acute quite entire rad. ones spatulate, Stem ones ovate lanceol. somewhat stem-clasping

17847 The only species

17848 Lvs. obl. obt. semiamplexic. at base thick and fleshy entire rad. lvs. spathul. Panic corymbose, Involucrum of many closely placed linear scales

17849 Lvs. cord. stalked angular sharply toothed white and woolly ben. upper ones amplexic. Capitula numerous in corymbose panicle

17850 The only species

17851 Erect pilose, Lvs. ovate acute serrated tapering at the petioles, Inflorese. paniculate corymbose

17852 Lvs. lin. obt. hoary half stem-clasp. Stem corymbose, Bran. 1-flwd. Lflts. of involucrum squarrose glandular

17853 Lvs. ovate repandly sinuate, Panicle compound divaricate

17854 Glabrous erect, Lower lvs. petiol. lyrate downy beneath, Terminal lobe reniform toothed, Upper lvs. sessile amplexic. lanceol. and little toothed uppermost ones quite entire, Pedunc. 1-headed

17855 Stem simple rather woolly, Rad. lvs. ellip. repandly toothed, Stem lvs. lanceol. entire, Inflorese. corymbose

17856 Smoothish, Stem simple furrowed, Radical lvs. ellip. toothed cauline one amplexic. Panicle elong. crowded leafless, Achænia glabrous

and Miscellaneous Particulars.

2725. *Ozothámnus.* A mixture of peat and loam suits this genus, and the species may be increased by cuttings.
2726. *Leptostélma.* This genus may be increased by division of the root, and will thrive in good garden soil.
2727. *Adenotrichia.* Culture, &c., see Leptostélma, above.
2728. *Diplopáppus.* This genus may be increased by cuttings, and the plants thrive in a sandy loam.
2729. *Brachyglóttis.* For soil and propagation see Diplopáppus, above.

History, Use, Propagation, Culture,

2730. *Rhodánthe* is a very elegant little tender annual, and highly deserving a place in every greenhouse, and it requires to be grown in a good light soil.

1747. *Podolepis* 17860 *grácilis* is a very pretty annual, deserving a place in every flower border.

2731. *Diplócoma.* A handsome but rather tender herbaceous plant, requiring a light soil, with slight protection in severe weather.

2732. Nèja may be readily increased by cuttings, and will thrive in a good light soil.

2733. *Mutísia* is an exceedingly interesting genus of shrubby climbers, with leaves terminating in tendrils, by the prehension of which the stems are supported. M. latifólia represents a family of climbers so very different from every other hitherto propagated in British gardens, that we cannot but strongly recommend it for trial against every conservative wall. (*Arb. Brit.*)

2734. *Chætachlæ'na.* A very pretty herbaceous plant, of easy culture.

17857 Glabrous, Stem 1-4-headed, Lvs. spatulate toothed, Lower ones renif. Upper ones somewhat rhomb. Petioles naked woolly at base, Achænia glabrous

17858 Lvs. sessile thickish lin. pinnatifidly toothed wrinkled glabrous, Heads solitary, Involucr. clammy, Outer scales spreading

17859 The only species

17860 Glabrous branch. Scales of involucr. glandular along the spike obtuse, Cauline lvs. adnate by the auricles to the stem.

17861 The only species

17862 The only species

17863 Scandent, Lvs. pinnate, Lflts. 6-7 ov.-lanceol. very acute sess. cobwebbed ben. terminat. by large branching tendril, Stip. ellipt. Flws. solit. Lower scales acute and reflexed [equal truncate

17864 Stem winged, Lvs. cord. obl. dentately spinose woolly beneath, Scales of involucr. appendiculate, Rays of pappus

17865 Glabrous, Stem terete, Lvs. amplexicaul. cord. oval spinosely toothed reticulated

17866 Lvs. sessile obl. lanceol. attenuated at the base, Outer scales of involucr. ending each in a long flexuose bristle

17867 Quite glabr. Involucr. 15-toothed, Pappus wanting, Achænia mucron. at apex

17868 Branchl. and pedicels pubesc. Involucr. 15-toothed, Pappus of 5 palem

17869 The only species

17870 Decumbent, Stem and under side of lvs. tomentose, Lvs. altern. pinnatif. upper ones lin. entire, Pedunc. elong. 1-headed tomentose

17871 Lvs. glabr. obovate orbicular acutely toothed petiolate, Petioles ciliated

17872 Stem solid not pruinose, Ligulate flowers of the ray without any style

17873 Stem hairy, Lvs. pinnate rather hairy, Lflts. lin. acute channeled some entire and some 3-fid. Peduncles 1-headed

17874 Stem erect branch. Lvs. lanceol. sharply serrated the lower serratures awned, Ligulæ usually 3

17875 Stem and branches erect angular, Lvs opposite and altern. pinnate, Lflts. 6-8 pairs nar. serrat. dotted, the serrats. of the upper lvs. awned, Peduncles corymbose 1-headed

17876 The only species

17877 The whole plant canescent

and Miscellaneous Particulars.

2735. *Lasthènia* is a genus of ornamental annuals, which may be sown in the open border; and as the plants, under ordinary circumstances, flower in about 6 weeks after the seeds are sown, it will be found necessary to have several sowings to keep up a good appearance.

2736. *Baëria*. An elegant annual, requiring the same management as Lasthènia.

2737. *Eriophyllum* is a desirable and showy herbaceous perennial, is readily increased by division, and thrives in any good garden soil.

2738. *Lagenóphora* is a showy perennial, easily increased by division.

2739. *Ozýbra* 17876 *chrysanthemöides* is an ornamental annual. It may be sown in the open border, where it is intended to remain.

2740. *Cladánthus*. A genus of very ornamental annuals, may be sown the open border.

2743. *Callíopsis.* A very showy genus of annuals, of very easy culture, and deserving a place in every garden.

FRUSTRANEA.

17878 Stem hispid, Lvs. altern. petiol. ov. 3-nerved serrate, Heads large drooping, Scale of invol. expanded scabr. on the back, Paleæ 3-fid, Achænia biaristate [subul. or lin.-lanceol. slightly downy ciliat.
17879 Lvs. oppos. sess. subamplexic. ov.-lanceol. crenato-serrate very hairy ab. scabr. to touch, Scale of invol. imbric.

17880 Leaves cordate entire and 3-lbd. Pedun. swollen upwards, Involucrum foliaceous, Paleæ very acute

17881 Lvs. cord. obl. toothed tomentose acute, Corymbs compound, Throat of corolla campanulate about equal to the length of the tube

17882 Annual rather downy, Lvs. narrow undivided rather ent. Scales of invol. ciliated at the base with a very short glabrous subulate appendage
17883 Perennial, Invol. very hairy at the base with lin.-lanceol. scales, Cors. of the disk very hairy

17884 Stem erect branch. furrow. glabr. Lvs. oppos. sess. ciliated at base, lower ones biternate, upper ones ternate or 3-partite, Ligulæ acutely 5-toothed [bipin. Segms. alm. filiform rath. fleshy furrowed above
17885 Stem erect slender bran. especially upwards striat. and glabr. as is every part of plant, Lvs. oppos. pinnatif. and
17886 Lvs. generally glabr. petiolat. obovato-spathul. and undivided ternate pinnate and even bipinnate, Lflts. obov. or oval and very obt. those of lowermost lvs. most orbicular
17887 Stem erect but weak and flex. Lvs. oppos. and connate, lower ones ent. rest more or less pinnatif. or bipinnatif. Segms. lin.-lanceol. flaccid glabr. Pedun. elongated
17888 Stem ditto, Lvs. oppos in remote pairs spathul. tapering at base undivided or cut in pinnated manner, Pedun. elongat. Achæn. obl. ov. bearing 2-3 white chaffy scales

17889 Stem glabr. Lvs. altern. ov. acumin. quite entire 3-nerved scabrous above and pilose beneath, Petioles ciliated, Receptacle conical hollow [obl. minutely tubercled on both sides
†12488 Glabr. Radical lvs. pinnate or bipinnatifid, Outer scales of involucrum very short acute, Ligulæ trifid, Achænia

17890 Radical lvs. bipinnatifid cauline ones pinnate, Outer scales of invol. lin. obl. Ligulæ 3-toothed, Achænia smooth
17891 Pilose, Upper lvs. ternate, Segms. ovate, Achænia ventricose tuberculated [margined with a short wing

17892 Lvs. obl. membran. undiv. Pedunc. ventric. at top, Outer scales of involuc. 3 times as short as their appendages

NECESSARIA.

17893 The only species

17894 Lvs. lanceol. waved nrly. ent. white and cottony ben. Pedunc. naked, Invol. cylindr. imbricat. with many close-pressed subulate scales

SEGREGATA.

17895 Lvs. oval lanceol. cuneate at the base and acumin. at apex coarsely serrated in the middle

and Miscellaneous Particulars.

2744. *Plectocéphalus.* A very curious and striking annual.
2745. *Gastrocárpha.* A handsome strong-growing annual.
2746. *Centroclínium.* A showy plant, requiring rather a moist high temperature.

Page 748. CLASS XX. — GYNANDRIA.

ORCHIDA'CEÆ. — "The uses to which the plants of this family are applied are few, but in several instances highly romantic. In Demerara, that most deadly of all poisons, the 'Wourali,' is thickened by the juice of the Catasetums; and in Amboyna the *true* 'Elixir of Love' is prepared from the minute farina-like seeds of Grammatophyllum speciòsum. In Mexico, where the 'language of flowers' is understood by all, the Orchidaceæ seem to compose nearly the entire alphabet. Not an infant is baptised, not a marriage is celebrated, not a funeral obsequy is performed, at which the aid of these flowers is not called in by the sentimental natives, to assist the expression of their feelings; they are offered by the devotee at the shrine of his favourite saint, by the lover at the feet of his mistress, and by the sorrowing survivor at the grave of his friend: whether, in short, on fast days or feast days, on occasion of rejoicing or in moments of distress, these flowers are sought for with an avidity which would seem to say that there was 'no sympathy like theirs;'—thus, 'Flor de los Santos,' 'Flor de Corpus,' 'Flor de los Muertos,' 'Flor de Maio,' 'No me olvides' (or 'Forget me not'), are but a few names out of the many that might be cited, to prove the high consideration in which our favourites are held in the New World. Nor are these the only honours that are paid to them: for Hernandez assures us that in Mexico the Indian chiefs set the very highest value on their blossoms, for the sake of their great beauty, strange figure, and delightful perfume; while in the East Indies, if Rumphius is to be credited, the flowers themselves positively refuse to be worn, except by princesses or ladies of high degree. In Honduras, again, the large hollow cylindrical stalks of a fine species of Epidendrum [E. tibicinum] are made into trumpets by the little boys and girls of the country; and the pseudo-bulbs of several of the more succulent species are used instead of resin for the strings of their guitars. The following are, however, almost the only known instances in which the tribe do any direct service to mankind. The bulbs of Maxillaria bicolor contain a large quantity of an insipid watery fluid, which is greedily sucked by the poor natives of Peru in the dry season; a fluid of a similar nature is obtained from what is probably a Lælia, in Mexico, and is administered as a cooling draught in fevers; from the roots of some of the orchises, the nutritive substance called 'Salep' is obtained; in New Zealand certain species are of considerable importance as esculents; and in Guiana, the soles of the shoemaker are as much indebted to the viscid matter obtained from the Catasetums and Cyrtopodiums, as are the poisoned arrows of the Indians." (*Bate. Orch.*, p. 2.)

Mr. Bateman, speaking of the fragrance of many of this order, says: "We question whether 'Araby the blest' can boast of any perfumes that can at all compete in sweetness with those exhaled by such plants as Angræcum odoratissimum *Lindl. MSS.*, Tetrapeltis fragrans, Aerides odoratum, and Epidendrum aromaticum. Other species emit odours which remind the recipient of the smell of a druggist's shop, of the milk of the cocoa-nut, of fresh hay, of wallflowers, violets, pomatum, aniseed, and angelica, of noyau, cinnamon, allspice, citron, musk, and honey. Some of these yield no fragrance, except in the daytime; but there are others which, like Epidendrum nocturnum and Brassavola nodosa, are aromatic only by night; and there are none, we believe, which are positively offensive at any hour, either of the night or day." (*Ib.*, p. 4.)

The attention and curiosity are excited no more by the beauty and delicacy of the blossoms of many of this tribe, than by the very close resemblances they bear to objects of the animal kingdom. In our native species we find the bee, fly, spider, lizard, man, &c., surprisingly imitated; and in those of warmer climates, swans, eagles, doves, pelicans, &c. &c.

The cultivation of Orchidàceæ may be mentioned under two heads, namely, that of terrestrial and that of epiphytal Orchidàceæ.

Terrestrial Orchidàceæ should never have a great volume of external air admitted at once, however fine the weather may be. To prevent the house (which should have a southern aspect) from becoming too hot, a thick canvass shading should be drawn over it during summer sunshine. During the growing season, Orchidàceæ require a moderately moist heat, varying from 65° to 85°; in the dormant season, from 60° to 75° is quite sufficient; in the season of rest the house should be kept dry. Orchidàceæ in pots should be sparingly watered in the growing season; in the dormant state, little or no water should be given. The secret of growing these plants is to take care never to kill the old roots: when too much water is given, while the plants are in a growing state, almost all the old roots invariably perish. (*Paxton* in part.)

Epiphytal Orchidàceæ may be grown in the same house with, and receive nearly the same treatment as, terrestrial Orchidàceæ, except that they require to be grown on, instead of in, the soil, attached to blocks of wood, or in baskets, or any rustic construction in the basket way, and suspended from the roof, or by any other suitable means. In the outset, before the plants are established on the soil, or wood, where they are intended to be grown, it is very necessary to secure firmly the plant, and such roots as may be already formed, to the wood or soil, by means of bast or pegs, as judgment shall direct. The best kind of soil for growing epiphytal Orchidàceæ on is found to be good surface peat, cut into pieces of 1 in. to 2 in. square; this should be placed over a considerable quantity of drainage, in order to carry off superfluous water, and at the same time, if they are plunged in a tan-bed, will allow the heat to rise more freely than if the pots were entirely filled with soil.

"It is of the greatest importance to preserve and encourage the roots; and, as they are generally protruded near the surface of the soil, it should be raised several inches above the level of the pot, in a pyramidal form, in order that they may have full room to push out." (*Bot. Reg.*)

Syringing the plants moderately, when in a growing state, till the flowers are nearly expanded, helps their growth much.

For some other particulars respecting this order, see p. 748. to 767.

Order 1. MONANDRIA. Stamen 1.

1. MALAXI'DEÆ. — Pollen cohering in masses of a fine waxy texture, without any of the cellular substance by which the grains are connected, remaining under the form of a distinct gland lying upon the stigma, or of a transparent caudicula between the pollen masses and the gland.

§ 1. *Pleurothálleæ*. Column erect, drawn out a little at the base.

†1894 *Pleurothállis*, page 749.

†1913. *Octomèria*, page 749.

2747 *Lepanthes*. Sepals spreading, connate at the base. Petals 2, free and short. Labellum 2-lobed at apex, and combined with the column. Column elongated, cylindrical, 2-winged. Pollen masses 2.

2748. *Specklínia*. Sepals conniving, equal, distinct; lateral ones saccate at the base, gibbous outside. Petals conforming to the sepals, but much smaller. Labellum free, saccate at base. Column short, free, membranaceously winged. Anther 1-celled. Pollen masses 2. (No species given.)

†1924 *Stèlis*, page 750.

2749. *Oberònia*. Sepals spreading or reflexed, usually equal, free. Petals smaller than the sepals. Labellum ascending, of various forms, usually elongated, always more or less 4-lobed. Column small, free. Stigma elevated. Anther 2-celled. Pollen masses 2, pear-shaped, solid. (No species given.)

†1927. *Micróstylis*, page 750.

†1925. *Malàxis*, page 750.

†1882. *Corallorhiza*, page 749.

2750. *Aplectrum*. Petals equal, connivent. Labellum unguiculate, not drawn out at the base. Column free. Anther seated below the summit of the column. Pollen masses 4, oblique, lenticular.

2751. *Aciánthus*. Sepals subringent, acumin., free. Petals smaller, acum. Labellum free, entire, bicallous at base, with a naked disk. Column semiterete, clavate. Anther term., recumbent, 2-celled. Stigma ovate, transverse. Pollen masses 8.

†1928 *Líparis*, page 751.

2752. *Cæ'lia*. Sepals distinct, equal, spreading. Petals nearly equal, but a little smaller than sepals. Labellum

quite entire, unguiculate, continuous with the base of the column. Column short, continuous with ovarium, drawn out a little at base. Anther 2-celled. Pollen masses 4, by pairs.
†1904. *Pholidòta*, page 749.
†1897. *Cœlógyne*, page 749.

§ 2. *Dendrobièæ.* Column recumbent, drawn out much at the base.

2753 *Megaclìnium.* Sepals erect, unequal; lateral ones the smallest, combined with the column. Petals short. Labellum short, quite entire, articulate with the base of the column. Column short, marginate, disk-formed. Anther obsoletely 2-celled. Pollen masses 4, cohering by pairs.
2754. *Bolbophỳllum.* Sepals erect, acumin., nearly equal; lateral ones combined, or connate with the base of the column, and oblique at the base. Petals short. Labellum articulated with the foot of the column, unguiculate, usually entire. Column short, bidentate or 2-horned in front. Anther 2-celled. Pollen masses 4, free, very unequal, sometimes combined in one, and sometimes cohering by pairs.
2755. *Cirrhopétalum.* Sepals ringent; lateral ones acumin., drawn out at the base, adnate to the column, much longer than upper one. Petals short, apiculated. Labellum entire, articulated with base of column. Column small, drawn out at base, and furnished with 2 petaloid horns at top. Anther 2-celled. Pollen masses 4, 2 inner ones smaller.
2756. *Trìas.* Sepals equal, ovate, spreading, connate at the base. Petals small, erect. Labellum small, undivided. Column short, semiterete, emarginate, free. Anther 2-celled, drawn out into a petaloid, cuneated, emarginated membrane at the apex. Pollen masses 4, 2 inner ones smaller.
2757. *Bryòbium.* Flowers villous. Sepals conniving, lateral ones equal at the base. Petals narrower and shorter than the sepals, reflexed between them. Labellum undivided, unappendiculated, constricted at the base. Column short. Pollen as in E'ria.
†1912. *E'ria*, page 749.
2758. *A'porum.* Sepals fleshy, erect; lateral ones larger, oblique, connate with the column. Petals smaller than upper sepal. Labellum articulated with foot of the column, undivided, or 3-lobed. Limb crested, callous, or naked. Column semiterete, drawn out at base. Anther sess., 2-celled, sometimes membran. at apex. Pollen masses 4, collateral by pairs.
†1908. *Polystàchya*, page 749.
†1900. *Dendròbium*, page 749.
2759. *Paxtònia.* Sepals 6, spreading, equal. Labellum conforming to the petals. Column erect, terete, subclavate, a little shorter than the petals. Anther termin., opercular, deciduous. Pollen masses 8, narrow, clavate, cohering at tops.

II. EPIDE'NDREÆ.—Pollen cohering in masses of a fine waxy texture, with cellular substance. Caudiculæ not transparent, and connected with the stigma by means of a gland, as in *Vánda*; but powdery, and very often turned back on the face of the pollen masses. Anther terminal, opercular.

†1907 *Epidéndrum*, page 749.
2760. *Dinèma.* Sepals and petals nearly equal, spreading. Labellum large, membranous, undivided, unguiculate, combined with the base of the column. Column short, bicornute. Anther 2-celled. Pollen masses 4, adnate by pairs to 2 replicate caudiculæ.
2761. *Encỳclia.* Sepals and petals nearly equal, connivent. Labellum cuculate, involving the columns, 3-lobed at apex, callous at base. Column free, semiterete, clavate, parallel with the labellum. Anther 4-celled, with marginate dissepiments. Pollen masses 4. Collateral caudiculæ 4, revolute.
2762 *Chỳsis.* Sepals a little connate, spreading. Petals conforming to the sepals. Labellum 3-lobed, spreading; Column marginate, channeled, rustic. Anthers roundish, glabrous. Pollen masses 8; the four outer ones thin, and the four inner ones thicker, beak convex.
2763. *Physínga.* Sepals membranous, equal, connate at the base. Petals small, obliquely adnate to the base of the sepals. Labellum fleshy, tubercular, undivided, connate with the base of the column, and furnished with a bladder-formed sac at the base. Column fleshy, short, 2-lobed, antheriferous at the base. Pollen masses 4, adnate to 2 twin powdery threads.
†1903. *Isochìlus*, page 749.
2764. *Hartwègia.* Perianth spreading, coloured. Lateral sepals drawn out at the base, adnate to the labellum. Labellum connate with the column, gibbous at base, ovate. Anther 4-celled. Pollen masses 4. Caudiculæ replicate.
†1914. *Brassavòla*, page 749.
2765. *Læ'lia.* Sepals flat, lanceol., equal. Petals larger than sepals, fleshy, flat. Labellum 3-parted, lamellate, twisted round the column. Column wingless, fleshy, channeled in front. Pollen masses 8, with 4 elastic caudiculæ.
2766. *Schombúrgkia.* Sepals and petals similar, spreading, all free and equal at the base. Labellum difformed, membranous, 2-3-lobed, cucullate, connate at the base, with the margin of the column tumid above the base with lamellate veins. Column marginate. Pollen masses 8.
†1906. *Cattlèya*, page 749.
†1905. *Broughtònia*, page 749.
2767. *Leptòtes.* Sepals and petals linear, nearly equal, spreading. Labellum 3-lobed, parallel with the column. Lateral segms. short, convolute around the column, middle segm. obl. with reflexed margins. Column short, thick, semiterete. Pollen masses 6, incumbent; 2 upper ones pear-shaped, oblique, compressed; 4 lower ones unequal and thinner.
†1911. *Blètia*, page 749.
2768. *Cryòbe.* Sepals and petals similar, lanceol. conniving, lateral ones oblique at the base. Labellum large, membran., cucullate, never expanded, half-connate with the clavate marginate column.
2769. *Pesomèria.* Sepals nearly equal, free, deciduous. Petals conform, adnate to the base of the column, persistent. Labellum connate with the base of the column, gibbous at the base, with an undivided convolute limb. Column clavate, semiterete. Pollen masses 4, cuneate.
2770. *Phàius.* Sepals and petals nearly equal, spreading, free. Labellum usually cucul., adnate with the base of the column, spurred, entire, or 3-lobed, usually keeled, lamellose or crested above. Column erect, continuous with the ovarium, semiterete, marginate, elongated. Anther 8-celled. Pollen masses 8, nearly equal.

III. VA'NDREÆ.—Pollen cohering in masses of a fine waxy texture. Caudiculæ separating along with the gland of the stigma, and forming a strict adhesion with the pollen masses. Anther terminal, rarely dorsal, opercular.

2771. *Nanòdes.* Perianth ringent. Upper sepal arched, lateral ones connate to the labellum at the base. Petals conforming to the lateral sepals, free. Labellum fleshy, undivided, connate with the column. Column winged. Anther 2-celled, beaked. Pollen masses 4, collateral, sessile.
2772. *Aspàsia.* Perianth spreading, equal; lateral sepals free, the upper one connate with the petals at the base. Labellum oblong, concave, spurless, obsoletely 4-lobed, half-connate with column. Column parallel with the labellum, semiterete, marginate. Pollen masses 2, pear-shaped, furrowed behind. Caudiculæ flat, cuneated.
†1902. *Ornithidium*, page 749.
2773. *Sophronìtis.* Perianth spreading. Sepals nearly equal, imbricated, free. Labellum entire, cucul., connate with the base of the column, with a simple transverse crest in the middle. Column free, winged on both sides at the apex. Anther 8-celled. Pollen masses 8.
†1890. *Trìxeuxis*, page 749.
†1910. *Ornithocéphalus*, page 749.
2774. *Cirrhæ'a.* Perianth spreading. Sepals free, equal. Petals linear, flexuose. Labellum unguiculate, continuous with the column, tripartite. Column erect, clavate, terete, with a nearly square horizontal stigma, and a

tendril beak. Anther dorsal, membranous, subunilocular. Pollen masses 2, parallel, oblong, compressed, with a short-horned caudicula, and an incurved gland.

2775. *Sarcochìlus.* Perianth spreading. Lateral sepals connate with the claw of the labellum beneath. Petals conform to the sepals. Labellum spurless, continuous with the claw of the labellum, slipper-shaped; middle lobe fleshy, solid. Pollen masses 2, sessile on a deltoid gland.

†1892. *Maxillària*, page 749.

†1891. *Xylòbium*, page 749.

2776. *Bifrenària.* Sepals spreading, free, nearly equal. Lateral one adnate to the produced base at the column. Petals about half the size of the sepals. Labellum articulated to the mucronate base of the column, cucullate, 3-lobed, callous in the middle. Column short, semiterete, mutic. Anther mutic, somewhat crested. Pollen masses 4, incumbent, with two distinct caudiculæ.

2777. *Trigonìdium.* Sepals equal, cohering into the form of a trigonal cup, spreading at the top. Petals about half the size of the sepals, veiny. Labellum short, 3-lobed, articulated with the column, fleshy in the middle. Column short, free, semiterete. Anther 1-celled. Pollen masses 4, cohering. (No species given.)

2778. *Trichoplìlia.* Sepals and petals equal, spreading, narrow. Labellum large, petaloid, convolute, parallel with the column, 3-lobed. Column terete, clavate. Anther 1-celled, compressed, convex in front. Pollen masses 2, adhering to a slender cuneate caudicula. Gland small.

2779. *Dicrypta.* Sepals free, erect, equal. Petals conform to the sepals, but smaller. Labellum 3-lobed, fleshy, articulated with the column. Column continuous with the ovarium, semiterete, clavate in front at the base. Anther obsoletely bilocular. Pollen masses 4, flattened, incumbent, with a short linear caudicula, and a binate gland.

2780. *Govènia.* Perianth bilabiate. Lateral sepals falcate. Petals conniving under the upper sepal. Labellum quite entire, spurless, concave, articulated with the column, sessile. Column terete, margined on both sides at the apex, drawn out a little at the base. Anther hood-formed, 1-celled. Pollen masses 4, solid, incumbent, with a short caudicula, and a small triangular gland.

2781. *Batemannia.* Flower ringent. Sepals spreading, lateral ones unguiculate. Petals broader than sepals, oblique at base, adnate to the produced base of the column. Labellum articulate to the column, 3-lobed, cucullate. Column semiterete. Anthers small, 2-celled, membranous. Pollen masses 2, 2-lobed behind, with a triangular gland and no caudicula.

2782. *Cycnòches.* Perianth spreading. Lateral sepals lanceolate, upper one narrow. Petals broader than sepals, falcate. Labellum free, spurless, lanceolate, quite entire, continuous with the column, with an abrupt callous claw. Column elongated, arched, clavate at apex, furnished with two falcate auricles. Anther 2-celled. Pollen masses 2, furrowed, with a linear caudicula and a thick gland.

2783. *Myánthus.* Perianth flattened. Sepals free, equal, similar to the petals, but narrower. Labellum flat, obovate, tridentate, shorter than the sepals. Column erect, terete, bicirrhose at the base. Anther and pollen masses as in Catasètum.

†1889. *Catasètum*, page 749.

2784. *Monachánthus.* Perianth flattened. Sepals and petals equal, turned backwards. Labellum fleshy, undivided, ventricose, much larger than the sepals. Column short, thick, mutic. Anther and pollen masses as in Catasètum.

2785. *Mormòdes.* Upper sepal a little arched, narrow, lateral ones reflexed. Petals broader than the sepals, erect. Labellum ascending, 3-lobed, cuneated, apiculated, articulated with the column. Column semiterete, mutic. Pollen masses 4, connate by pairs, fixed to thick caudicula, and adhering to thick fleshy gland.

2786. *Stanhòpea.* Perianth membran., spreading, or reflexed. Sepals free, subundulated. Petals narrower than sepals. Labellum free, spurless, fleshy, and horned on both sides. Column very long, marginate. Anther 2-celled. Pollen masses 2, elongated, cleft, caudicula shorter than the 2-lobed gland.

2787. *Gongòra.* Perianth flattened. Lateral sepals free, upper one connate to the back of the column. Petals smaller, adnate to the middle of the column. Labellum continuous with the base of the column, free, unguiculate. Column very long, arched, clavate, marginate. Anthers subbilocular. Pollen masses 2, linear, sessile on a cuneated caudicula.

2788. *Coryánthes.* Perianth spreading. Sepals dilated, flexuose, conduplicate. Petals erect, much smaller than the sepals. Labellum large, unguiculate, galeate, continuous with the base of the column, 3-dentate. Column terete, 2-horned at the base, elongated, recurved at apex, 2-winged. Anther 2-celled. Pollen masses 2, compressed, sulcate behind, with a linear arched caudicula and a lunate gland.

2789. *Angulda.* Perianth globose. Sepals and petals free, concave, nearly equal. Labellum unguiculate, cucullate, 2-lobed, with an intermediate reflexed segment. Column semiterete, clavate, 2-horned at apex. Anther beaked. Pollen masses 2, with a lanceolate caudicula and small ovate gland. (No species given.)

2790. *Peristèria.* Perianth globose. Sepals somewhat connate with the base of the labellum. Petals smaller than the sepals. Labellum erect, articulated in the middle. Column erect, semiterete, dilated at the base. Anther crestless, 2-celled. Pollen masses 2, cleft behind. Gland sessile, naked, involving the beak.

†1885. *Cymbìdium*, page 749.

†1901. *Camaridium*, page 749.

2791. *Gròbya.* Perianth flattened, bilabiate. Lateral sepals connate at the base. Upper sepal erect, shorter. Petals dilated, erect, connivent, much larger than the sepals. Labellum 3-lobed, naked, articulated with the base of the column, smaller than the sepals. Column erect, semiterete, arched, thickened at the base. Pollen masses 2-lobed behind, adnate to two short caudiculæ. Gland oval.

2792. *Acropèra.* Sepals spreading, upper one galeate, lateral ones divaricated. Petals short, oblique, truncate at apex. Labellum unguiculate, articulate at the base of the column, 3-lobed; the middle lobe smaller and saccate. Column erect, marginate, saccate at the base. Pollen masses 2, linear, convolute, with a linear subulate caudicula and a minute gland. Beak subulate.

2793. *Grammatophýllum.* Perianth flattened, spreading. Sepals and petals nearly equal. Labellum articulate with the column, short, 3-lobed, cucullate. Column arched, erect, semiterete, callous at the base. Anthers subbilocular. Pollen masses 2, globose, sulcate at the base, sessile upon the extremity of an arched gland.

†1888. *Geodòrum*, page 749.

2794. *Sobrália.* Perianth large, rather fleshy, flattened, spreading. Sepals and petals nearly equal. Labellum cucullate, involving the column, narrowed at the base, 2-lobed. Column erect, elongated, marginate, clavate, winged on both sides at the apex. Anther 2-celled. Pollen masses 2, with a linear caudicula.

2795. *Acanthophippium.* Perianth ventricose. Sepals agglutinate. Lateral sepals adnate to the claw of the column. Labellum unguiculate, articulate with the base of the column, 3-lobed, complicate, with a lamellate disk. Anther fleshy, 2-celled. Pollen masses 8, unequal, sessile.

†1929. *Calýpso*, page 750.

†1921. *Eulóphia*, page 759.

2796. *Dipódium.* Perianth spreading. Petals and sepals equal. Labellum auricled on both sides beneath the middle, bearded in the disk, saccate at the base, and connate with the column. Column erect, marginate, semiterete. Anther membranous, 2-celled. Pollen masses 2, obliquely 2-lobed, fixed to two caudiculæ.

2797. *Galeándra.* Perianth spreading or connivent. Sepals and petals ascending, free. Labellum funnel-shaped, spurred, undivided, sessile, sometimes fringed on the margin. Column erect, winged. Anther helmet-shaped, with a recurved crest. Pollen masses 2, excavated behind, with a short caudicula and elongated gland.

2798. *Zygopétalum.* Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of column. Labellum mutic, undivided, spreading, with an ascending claw and large transverse fleshy crest. Column short, arched, semiterete. Anther subbilocular. Pollen masses 2, almost sessile on a transverse gland.

2799. *Huntleya.* Perianth flattened, nearly equal. Lateral sepals involute at the base in front. Labellum flat, unguiculate, spreading, rhomboid, fringed at the base, articulated with the base of the column. Column clavate, cucullate at apex, winged in the margin. Anther 2-celled, mutic. Pollen masses 4.

2800. *Stènia.* Perianth flattened, nearly equal. Lateral sepals oblique at the base. Labellum continuous with

the base of the column, concave, appendiculated in the disk. Column semiterete, drawn out at the base, rounded at the apex, mutic. Anther 2-celled. Pollen masses 4, linear, twin; dorsal one small. Caudicula nearly square, acute.

†1896. *Cyrtopòdium*, page 749.

2801. *Cyrtopèra*. Perianth flattened. Sepals and petals ascending, nearly equal, connate with the claw of the column. Labellum spurless, concave, 3-lobed, with callous crested or tubercled veins. Column semiterete, marginate. Anther 1-2-celled. Pollen masses 2, [illegible] behind, with a [illegible]gular caudicula.

†1887. *Lissochìlus*, page 749.

†1893. *Notylia*, page 749.

2802. *Masdevállia*. Perianth closed. Sepals acuminate, or awned, connate into a campanulate tube. Petals short. Labellum short, oblong, concave, entire, articulated with the column. Column erect, linear, channelled. Pollen masses 2, with a short caudicula.

2803. *Cryptochìlus*. Perianth tubular, contracted at the throat, gibbous in front at the base. Sepals connate, except at the apex. Petals free, rather smaller than the sepal. Labellum undivided, free, continuous to the base of the column. Column semiterete. Anther 2-celled. Pollen masses 8, adhering by pairs to common glands.

†1919. *Ionópsis*, page 751.

2804. *Quekéttia*. Perianth cylindrical. Sepals linear, equal, gibbous at the base; lateral ones connate. Petals linear, of equal length. Labellum oblong, entire, mutic, parallel with the column, excavated at the base, bicallose. Column semiterete, erect, auricled on both sides at the apex. Anther 1-celled. Pollen masses 2, excavated behind; with a linear caudicula and a minute gland.

†1883. *Rodriguèzia*, page 749.

†1884. *Gomèza*, page 749.

2805. *Burlingtònia*. Perianth membranous, convolute, oblique. Sepals unguiculate, shorter than the labellum; lateral ones concave at the base, connate. Petals unguiculate, parallel with the labellum. Labellum 2-lobed, parallel with the column, with a channelled lamellate claw. Column terete, clavate. Stigma horned on both sides. Anther 1-celled. Pollen masses 2, excavated behind, adnate to a subulate elastic caudicula.

2806. *Comparéttia*. Perianth ringent. Middle sepal and petal short, free, somewhat galeate; lateral ones connate, one-spurred. Labellum free, flattened, obcordate, unguiculate, furnished with 2 spurs, which are hidden within the spur of the sepals. Column free, erect, mutic. Pollen masses 2, adnate to beaked cuneated caudicula.

†1898. *Macradènia*, page 749.

†1909. *Cryptarrhèna*, page 749.

†1895. *Oncìdium*, page 749.

2807. *Fernandèzia*. Perianth spreading. Sepals free. Petals conniving under the upper sepal. Labellum spurless, free, 3-lobed, tubercled on the disk. Column short, eared on both sides. Anther 2-celled. Pollen masses 2, obovate.

2808. *Scaphyglóttis*. Sepals connivent. Lateral ones drawn out at the base, a little connate with the foot of the column, upper one linear, convex. Petals a little shorter than the sepals. Labellum oblong, channelled, continuous with the column, with a repand margin. Column marginate. Pollen masses 4, sessile on a cuneated gland.

2809. *Pachyphýllum*. Perianth connivent. Sepals and petals free, equally acute. Labellum free, undivided, sessile, furnished with one tubercle at the base, and two at the apex. Column petaloid. Pollen masses 2. (No species given.)

2810. *Dichæ'a*. Perianth connivent. Sepals and petals free, acute, equal. Labellum unguiculate, naked, spurless, deltoid, articulated with the column. Column erect, terete, wingless. Anther 2-celled. Pollen masses 4, by pairs, collateral, with a cuneate caudicula and a minute gland.

2811. *Miltònia*. Perianth flattened. Petals revolute, and lateral sepals connate at the base, sessile. Labellum large, dilated, undivided, sessile, connate with the column, lamellate at the base. Column short, semiterete, eared at the apex. Pollen masses 2, adnate to an oblong caudicula.

2812. *Cyrtochìlum*. Perianth flattened. Sepals free, lateral ones unguiculate. Petals a little smaller than sepals. Labellum free, undivided, continuous to the base of the column, with a tuberculated claw. Column short winged. Anther 2-celled. Pollen masses 2, with a filiform caudicula and a minute gland.

†1886. *Brássia*, page 749.

2813. *Tetrapéltis*. Perianth somewhat spreading. Sepals free, equal. Petals very narrow, of equal length. Labellum free, sessile, saccate, geniculate, 3-lobed. Column erect, length of petals semiterete, clavate. Rostellum straight. Pollen masses 4, globose, pitted behind, adhering by pairs to two narrow caudiculæ connected by a common gland.

2814. *Phalænópsis*. Perianth flattened, spreading. Sepals free. Petals larger than the sepals, dilated. Labellum connate with the column, free, 3-lobed, callous at the base; middle lobe narrower, bicirrhose. Column lying upon the ovarium, semiterete. Rostellum gladiate. Anther 2-celled. Pollen masses 2, nearly globose, with a flat spatulate caudicula and a large caudate gland.

†1916. Vánda, page 750.

2815. *Camarótis*. Perianth flattened. Lateral sepals connate with the back of the labellum, free at apex. Petals a little smaller than the sepals, free. Labellum obovate, channelled, appendiculate at apex. Column erect, terete, free, beaked. Anther dorsal, apiculate, subbilocular. Pollen masses 2, with a very long subulate caudicula and a forked rostellum.

†1918. *Renanthèra*, page 750.

2816. *Micropèra*. Perianth equal, spreading. Lateral sepals adnate to the base of the labellum. Labellum continuous with the base of the column, slipper-shaped, 3-lobed; middle lobe very small. Column short, with a large inflexed rostellum. Pollen masses 2, with a subulate caudicula.

2817. *Saccolàbium*. Perianth flattened, spreading. Sepals equal to the petals, lateral ones usually largest. Labellum undivided, spurred, connate with the base of the column. Column erect, semiterete, with subulate rostellum. Anther semibilocular. Pollen masses 2, nearly globose, with an elongated caudicula and a minute gland.

2818. *Cleisóstoma*. Sepals and petals spreading, linear, nearly equal. Labellum spurred, connate with the base of the column, 3-dentate. Column semiterete. Anther semibilocular. Pollen masses 2, 2-lobed, nearly globose, with a filiform caudicula and a hooked minute gland. (No species given.)

†1915. *Sarcánthus*, page 750.

2819. *Œceóclades*. Perianth spreading, ringent, or connivent, nearly equal, free. Labellum free, sessile, articulate with the column, spurred, naked, or bilamellate at the base. Column elongated, semiterete. Anther 2-celled. Pollen masses 2, furrowed behind, with a narrow caudicula and a minute gland.

†1917. *Aérides*, page 750.

†1922. *Aeránthes*, page 750.

†1921. Angræ'cum, page 750.

2820. *Trichocéntrum*. Perianth spreading, free, equal. Labellum sessile, spurred, flat, 2-lobed, lamellose at the base, connate with the base of the column. Column short, semiterete, thick, winged on both sides. Anther 2-celled, mutic. Pollen masses 2, complicate, with a cuneated caudicula and a minute gland.

†1923. *Calánthe*, page 750.

IV. OPHRY'DEÆ. — Pollen cohering in innumerable waxy masses, collected on a cobwebbed elastic axis, fixed to the glands of the stigma. Anther terminal, erect, or resupinate, persistent, with complete cells.

†1859. *O'rchis*, page 748.

†1864. *Anacámptis*, page 748.

†1858 *Gymnadènia*, page 748.

†1860. *Nigritélla*, page 748.

†1865. *A'ceras*, page 748.

†1857. *Platanthèra*, page 748.

†1868. Herminium, page 748.

†1867. *Chamórchis*, page 748.

†1861. *Habenària*, page 748.

2821. *Bonátea.* Perianth and anther of Habenária. Upper lip of stigma free, cuculiated, or complicated; process of the stigma sometimes long and sometimes short.

2822. *Cynórchis.* Sepals equal, connivent. Petals fixed under the upper sepal. Labellum connate with the column, spurred, usually 4-parted. Sepals larger than the petals, and of a different texture. Column short. Anther horizontal or resupinate, with distinct elongated cells. Rostellum flat, 3-partite. Pollen glands naked. Lobes of stigma 2, fleshy.

†1862. *Bartholina*, page 748.
†1856. *Satÿrium*, page 748.
†1855. *Disa*, page 748.
†1862. *Serápias*, page 748.

2823. *Pterygódium.* Perianth subringent. Lateral sepals exterior, horizontal, concave. Labellum inserted in the middle of the column, between the remote cells of the anther.

2824. *Corÿcium.* Perianth ringent. Petals equal at the base, erect; lateral ones connate. Petals free, concave. Labellum unguiculate, connate with the face of the column, appendiculate in front. Anther dorsal, resupinate. Glands naked.

†1866. *O'phrys*, page 748.

2825. *Dispèris.* Perianth ringent, of 4-5 sepals. Lateral sepals exterior, horizontal, somewhat spurred. Labellum erect from the base of the column, and connected with it. Anther revolute, drawn out in two segments, which are bent in front.

V. Gastrodie'æ. — Anther terminal, opercular. Pollen masses cohering in granules, which finally become waxy, and are indefinite in number.

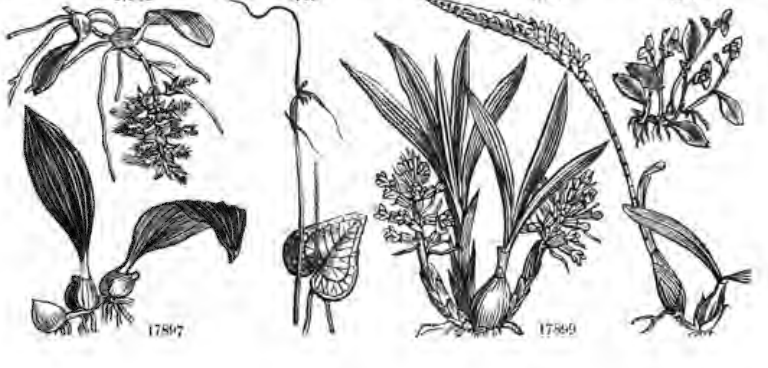
2826. *Gastròdia.* Perianth tubular, 5-lobed. Lobes second. Labellum closed, free, unguiculate, lying on the column. Column long, hollow at top. Anther deciduous, with approximate cells. Pollen masses large, composed of numerous angular particles.

VI. Arethu'seæ. — Anther terminal, opercular. Pollen masses as in tribe Neottièæ.

†1881. *Calcána*, page 749.

2827. *Corysánthes.* Perianth ringent. Helmet large. Lower lip 4-parted, short, hidden by the labellum. Labellum large, cuculiate, or tubular. Anther 1-celled, 2-valved, persistent. Pollen masses 4, powdery.

2828. *Pteróstylis.* Perianth ringent, 4-leaved, inner leaflet bifid. Labellum unguiculate, almost enclosed, appendiculate, or gibbous at the base. Column connate with the base of the galea, winged at apex. Anther persistent, with approximate cells. Pollen masses 2 in each, all compressed, powdery.



†1877. *Arethúsa*, page 749.
†1879. *Pogónia*, page 749.
†1878. *Calopógon*, page 749.

2829. *Glossódia.* Perianth of 5 equal spreading sepals. Labellum dissimilar, short, undivided, glandless. Appendage between the column and the labellum. Anther terminating the membranous dilated column, with approximate cells. Pollen masses 2 in each cell, compressed, powdery.

2830 *Chloræ'a.* Perianth membranous. Outer sepals nearly equal; lateral ones deflexed; upper one, along with the inner ones, conniving into a galea. Labellum sessile, cuculiate, entire or 3-lobed, with a crested disk. Column elongated, semiterete, marginate. Anther 2-celled. Stigma lying on the top of the column. Pollen masses 2, bipartite, cohering behind.

†1880 *Epipdctis*, page 749.
2831. *Caladènia*. Perianth bilabiate, glandular outside. Upper lip flattish. Labellum unguiculate, cucullate, somewhat 3-lobed, or narrowed at the apex, ornamented with rows of glands in the disk. Column membranaceously dilated. Anther persistent, with approximate cells. Pollen masses 2 in each cell, compressed, half 2-lobed, powdery.
2832. *Eriochilus*. Perianth bilabiate. Outer lateral sepals unguiculate; inner ones erect, smaller. Labellum unguiculate, inappendiculate, with a pubescent glandless disk. Column semiterete, simple at top. Anther persistent, mutic, with approximate cells. Pollen masses 4 in each cell.
2833. *Chiloglóttis*. Perianth bilabiate. Outer lateral sepals channelled, and terete at the apex. Labellum unguiculate, glandular in the disk, and furnished with a tongue-shaped appendage at the base. Column bifid at apex. Anther persistent, with proximate cells. Pollen masses 2 in each cell, compressed, powdery.
2834. *Cyrtóstylis*. Perianth bilabiate. Sepals mutic, 4 lateral ones nearly equal, spreading. Labellum dissimilar, stretched out, flat, obtuse, undivided, bicallose at the base. Column semiterete, dilated at apex. Anther persistent, with approximate cells. Pollen masses as in Chiloglóttis.
2835. *Micrótis*. Perianth ringent. Outer lateral sepals sessile; inner ones almost similar, ascending. Labellum dissimilar, oblong, obtuse, callous at the base. Column funnel-shaped. Anther furnished with a membranous auricle on both sides. Pollen masses 2 in each cell, powdery, fixed by the base.

VII. NEOTTIÆ. — Anther parallel with the stigma, and erect. Pollen masses simple, or consisting of granules in a loose state of cohesion.

†1874. *Spirànthes*, page 749.
†1875. *Stenorhýnchos*, page 749.
†1872. *Neóttia*, page 749.
†1876. *Listera*, page 749.
2836. *Pelèzia*. Sepals conniving into a cylinder. Outer lateral ones dependent, connate with the base of the column. Labellum entire, stretched out, spurred at the base, connate with the ovarium.
2837. *Sauroglóssum*. Perianth connivent. Lateral sepals linear, arcuately spreading, running into the ovarium at the base. Labellum linear, channelled, callous at the base. Column elongated, semiterete, drawn out at the base, and somewhat spatulate at the apex. Rostellum ovate. Pollen masses 2, 2-lobed, with a very short caudicula.
†1870. *Goódyera*, page 748.
2838. *Anæctochilus*. Perianth ringent. Upper sepal, along with the petals, forming a galea; lateral sepals spreading. Labellum connate with the column at the base spurred, with a channelled inflexed claw, and a 2-lobed spreading limb. Column short, with membranous, dilated, involute margins. Stigma bicallous at the base. Pollen masses 2, powdery, 2-lobed, with very short caudicula, and an oblong gland.
†1872. *Ponthiéva*, page 748.
2839. *Cránichis*. Perianth resupinate, subringent. Labellum arched. Anther as in Neóttia.
†1926. *Prescóttia*, page 750.
2840. *Calochilus*. Perianth ringent. Inner sepals sessile, smaller than the outer ones, erect. Labellum longer than the sepals, sessile, acuminated, with the margins and disk bearded. Anther parallel with stigma, persistent.
2841. *Prasophýllum*. Perianth ringent; galea in front; 2 outer sepals usually cohering, inner ones unequal-sided. Labellum ascending, undivided, spurless, unguiculate. Column bipartite. Anther parallel with the stigma, persistent, with approximate cells. Pollen masses 2 in each cell, powdery, fixed to the top of the stigma.
†1871. *Diùris*, page 748.
†1930. Vanilla, page 751.

17903 Petals ciliated and are as well as the upper sepal awned, Lvs. obl. obtuse emarginate shorter than the scape

17904 Lvs. oblong

17905 The only species

17906 Lvs. fleshy acute, Flws. sol. or twin, Sepals fleshy, Stems pendulous, Labellum emarginate crenulated

17907 Stems terete pendulous, Lvs. obl. obliquely emarginate obtuse, Flws. twin, Sepals oval, Petals conforming to the sepals but larger, Labellum roundish cucullate cordate [emarginate
17908 Stem erect fleshy, Lvs. obl. obtuse emarginate, Racemes horizont. 2-3-flwd. Sepals linear obtuse spreading
17909 Stems articulated clav. pendulous leafy at top, Lvs. obl. acute. Racemes later many-flwd. Labellum rhomb. unguiculate serrul. retuse

17910 The only species

[Labellum almost free 3-lobed with a callous depressed disk
17911 Lvs. oval corrugated twin ensif. Rac. almost simple, Sepals obl. and are as well as the cuneated petals spreading, [3-lobed, Lateral lobe short oblong
17912 Lvs. oval 2-edged ensif. Panicle term. branched, Sepal and petals obovate unguiculate spreading, Labellum
17913 Pseudo-bulb large 1-2-leaved, Scape panicled, Sepals lanceol. Labellum 3-lobed, Middle lobe orbicular
17914 Lvs. few lin. obl. obtuse coriaceous, Raceme term peduncl. few-flwd. Sepals and petals equal, Labellum 3-lobed, Middle lobe lanceol. acute horned inside at base.
17915 Lvs. lanceol. obl. acum. submembran. Panicle term. Sepals reflex, lanceol. Petals filiform, Labellum 4-lobed bituberculate at base, Middle lobe lin.

17916 The only species.

17917 The only species

17918 The only species

17919 The only species

17920 The only species

17921 Lvs. twin or sol. lanceol. Scape 2-edged 2-flwd. clothed with keeled scales, Ovarium clammy, Disk of labellum lin. elong. 3-lobed. at apex, Pseudo-bulbs ovate distant 4-angled
17922 Lvs. obl. lanceol. keeled arched, Scape elong. many-flwd. Pseudo-bulbs turbin. furrowed

17923 Petals and Sepals undulated obtuse, Mid. lobe of labellum round acute

17924 Flws. large, Sepals lanceol. Petals ellip. ovate ungui. with curled margins, Labellum obov. 2-lobed crenul.
17925 Sepals obl. lin. obtuse, Lateral ones falcate narrower than obtuse petals, Labellum obl. lanceol. 3-lobed, Mid. lobe obl. obtuse undulated, Lvs. obl. coriaceous
17926 Flowers fleshy, Sepals lin. obl. obtuse, Petals conform. to sepals but a little broader undul. Labellum 3-lobed, Middle lobe obcord. with tuberculated disk, Lvs. concave
17927 Sepals obl. acute upper one recur. narrower than petals, Petals oval obl. obtuse undul. Mid. lobe of labellum short obtuse undulately lacinlated, Lvs. obl. lanceol.

17928 The only species

[emarginate transversely plicate 6 unequal lamellæ on the disk
17929 Lvs. lanceol. Scape tall branched, Flws. spreading, Sepal lanceol. ellip. spreading, Labellum cucul. Mid. lobe
17930 Lvs. obl. lanceol. plicate, Scape simple, Sepals and Petals nearly equal lanceol. acumin. Labellum 3-lobed mid. lobe emarginate undulated with a solitary lamellæ in the disk
17931 Lvs. narrow ensif. plicate, Scape simple 2-4-flwd. Sepals lin. lanceol. lateral ones reflex. Petals cun. lanceol. Labellum 3-lobed, Mid. lobe narrow undulated furnished with 5 lamellæ on the disk

17968 Leaves obovate obl. 5-plicate lateral, Sepals truncate at top with acute angles which are drawn out into two tendrils.

17969 Lvs. broad lanceol. Scapes nodding many-flwd, Labellum spotted with purple inside

17970 Scape short pendulous, Raceme dense, Middle lobe of labellum curled on the mar in Column wingless

17971 The only species

17972 The only species

17973 Stem fleshy, Lvs. ensif. plicate, Scape radical

17974 Lvs. lanceol. pubesc. Heads imbricate termin.

17975 Petals obl. lanceol. acutish, Lateral lobes of labellum rounded, Perianth ovate

17976 Scales radical distant, Labellum straight with a pubescent disk

17977 Lvs. lin. lanceol. acumin. shorter than scape, Perianth spreading, Labellum fringed in the margin
[lum obcord. pubesc.
17978 Lvs. loratelv lanceol. striat. recurved at apex shorter than raceme, Sepals and petals obl. lanceol. acute, Label-
[obovate
17979 Lvs. lanceol. undul. acumin. longer than flexuose raceme, Sepals and petals ovate obl. acute. Labellum
17980 Lvs. lanceol. striat. longer than racem. Racemes many-flwd. Sepals and petals ovate lanceol. acute, Lobes of labellum obl. Lateral ones erect, Middle one large reflexed

17981 Sepals and petals ovate acumin. tessellated, Labellum unguiculate concave, Hood of column crenated

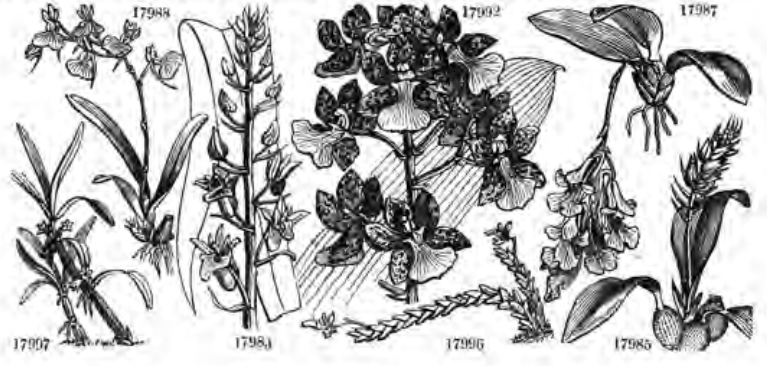
17982 The only species

17983 Stems fusiform fleshy, Lvs. lanceol. plic. Scape radical many-flwd. Sepals lanceol. Petals obl. connivng

17984 Lvs. obov. obl. on short petioles length of scape, Flwrs. ventricose, Sepals awned

17985 The only species

17986 The only species



17987 Racemes pendulous, Anterior sepal 2-lobed at apex, Upper sepal as well as the petal obtuse, Labellum furnished with two rows of fleshy lamellæ

17988 The only species

17989 Scape tall panicled, Sepals and petals obl. obtuse spreading [free, Petals obl. undul.
17990 Pseudo-bulbs very small 2-lvd. Lvs. compressed acum. sulc. above, Scape few-flwd. Sepals small spatul. apicul.
17991 Leaf erect fleshy, Scape tall panicled, Sepals ovate obtuse upper one arched, Petals obl. obtuse undulated, Labellum large 3-lobed [undulated margins
17992 Bulbless, Lvs. obl. acute striat. fleshy, Scape compound racemose, Sepals and petals obl. obtuse concave with
17993 Pseudo-bulbs ovate ribbed 2-lvd. Lvs. ligul. lanceol. Raceme few-flwd. radical, Sepals and petals ovate obl. subundul. Lamellæ on the disk of labellum truncate
17994 Pseudo-bulbs obl. furrowed compressed, Leaf lanceol. coria. Scape panicled many-flwd. Petals and sepals obovate undulated, Disk of labellum tubercularly crested at the base [acute spreading
17995 Pseudo-bulbs ovate furrowed 2-lvd. Lvs. broad linear shorter than the panicled scape, Sepals and petals oblong

17996 Lvs. ovate obtuse keeled, Flwrs. panicled, Labellum hastate, Lateral lobes acute, Middle lobe oblong obtuse

17997 Lvs. lin. emarginate at the apex, Flwrs. usually twin, Labellum lin. apicul. repand

History, Use, Propagation, Culture,

2842. *Ceratiola* 18036 *ericŏides* is a small heath-like evergreen shrub, grown in British gardens in peat soil, and may be propagated by cuttings.

18024 The only species

18025 The only species

18026 Lvs. ovate or oval acute discoloured, Spike generally 4-flwd. Outer sepals pubescent, Label.um multifid towards the base, Sack of labellum subdidymous

18027 Root fasicled filiform tomentose, Radical lvs. spatulate ovate, Cauline ones sheathing, Flowers spreading, Labellum dotted inside

18028 Labellum a litte longer than the perianth furnished with a semilanceol. acum. point, Column 2-gland. at the base, Spike 4-8-flwd.

18029 Ovaria obovate 3 times longer than bractea. Sepals acumin. hind ones cohering at the base

HEXANDRIA.

18030 Lower lvs. renif. 6-angular 3-lobed, Upper lvs. 3-partite, Cal. cylind. ventricose and 6-spurred at the base, [Lip. cord. cuspid. the cusp twisted filiform
18331 Lvs. renif. emarg. undul. pubesc. beneath, Limb of cal. ventric. at base obl. oblique emarg. on both sides peduncl. 1-flwd. bractless pubesc. [one longer inflated with a broad emarg. undul. lamina
18032 Glabrous, Lvs. cord. renif. Flwrs. solit. Tube obov. Limb cylind. bilabiate, Upper lip. lanceol. acute, Lower
18033 Glabrous, Stems furrow. Lvs. 3-lobed, Cal. cyclind. incurv. Lip. cord. cusp. Appendage 6-parted reflexed [more silky ben. th. above, Flwrs. forming large pouch, Throat circular vertical
18034 Lvs. 12 to 15 in. long and 4 in. broad scatt. ovato-cord. atten. at apex slightly waved and sinuat. ent. edges
18035 Glabrous, Lvs. cord. renif. Peduncl. 1-flwd, Tube of perianth obliquely ventric. at base stretched out from the mid. to the apex cylindricul, Limb orbicul. ciliated.

Order 7. POLYANDRIA. Stamens more than 6.

2844. *Pterocárya*. Male flws. in spikes. Stams. in a flower many. Female flws. in long pendulous spikes, and distant, sessile, and without bracteas. Cal. connate with the ovary, except in a terminal portion, which is cleft into ? 3-6 unequal lobes. Ovary, and the part of the cal. that is connate with it, taken together, flaggon-sh., bearing 2 wings above the base. Cell 1. Ovule 1, erect. Fruit subdrupaceous, angled, not opening, containing a bony nut. Embryo without albumen.

Order 6. MONADELPHIA. Stamens united into a single body.

2845. *Pícea*. Differs from *Pínus* and *Ábies* in having the cones erect. The strobile is cylindrical, and has its carpels not thickened at the tip. Both carpels and bracteas separate from the axis of the strobile; and the leaves are obviously 2-ranked in direction.

DIANDRIA.

18036 Flws. in axils of upper lvs. solitary except a small abortive one by the side of the principal flower

TETRANDRIA.

18037 The only species

POLYANDRIA.

18038 Stems several from crown of root, Lvs. subpelt. uneq.-cordate acumin. leathery succulent glabr. and shining on [both surfs. green ab. blood-red ben.

and Miscellaneous Particulars.

2843. *Sarcocócca*. The stigmas of this plant are so like those of the common box, that, in the absence of fruit, there would be little apparent reason to suspect a difference from *Búxus*, to which genus the narrow-leaved variety bears a great resemblance.

History, Use, Propagation, Culture

2844. *Pterocárya* 18054 *caucásica.* This tree is "sufficiently hardy to be classed among ornamental trees of the third rank. It is readily propagated by layers. For small gardens and diminutive arboretums this tree may serve very well to exemplify the Juglandáceæ. Care should be taken to train it to a single stem, and not to plant it in soil so rich and moist as to prevent it from ripening its wood. Perhaps something might be gained, in point of hardiness by grafting it upon the common walnut." (*Arb. Brit.*, vol. iii. p. 1452.)

18039 Very smooth, Lvs. ov.-rotund. obt. at base rarely little cord. uneq. apicul. Marg. minutely serrat. subciliat. Largest wing of cap. trian. projecting

18040 Smth. and shining herbac. Stem obscurely angled transparent. Root lvs. renif. nrly eq. at base broadly cren. on long pets. Stem lvs. sublob. sharply and uneq. serrat. Upper ones uneq. cord.

18041 Stem erect terete, Lvs. very uneq. cord. acumin. somewh. undul. and bullate crisped, Upper surf. bright green shining occasionally spot. with white having distant papillæ red ben.

18042 Lvs. altern. on smooth shining pets. ¼ length of lvs. uneq. cord. acumin. slightly concave pale green and sparingly strig. ab. paler or red ben. obscurely lbd. dbly. serrat.-ciliat. crisped

18043 Lvs. semicord. obsoletely toothed obtuse, Petioles and branches villous larger, Wing of capsule roundish

18044 Lvs. semicord. acute somewh. lbd. uneq. and doubly serrato-dent. above green with white spots below blood-cld. when old blanched, Wings of cap. rounded subequal

18045 Stem thick rough with thick short hairs or glands, Lvs. altern. large a span or more long sheathed when young with ov.-obl. decid. bractea very uneq. rotund-cord.

18046 Lvs. all radic. bright green ab. paler ben. subpelt. cord-palm. hairy with 7 strong radiating nrvs. very promin. bel. Lbs. lanceol. obl. undulat. sinuate unequal [bright red ben. M. flws. 4-pet. F. flws. 6-pet.

18047 Stem erect swollen at joints red, Lvs. uneq. cord. acute indistinctly sinuat. glabr. on both surfs. when young

18048 Very smooth, Lvs. equally cord. plaited cut into many uneq. very acute inciso-serrate lbs. Margin red, M. flws. 4-pet. Outer and larger alm. orbic. and red, 2 inner obov. waved white

19049 Stem erect geniculate and swollen at joints dull red minutely papill. and downy, Rad. lvs. somewh. renif. trunc. at base, Stem lvs. rndsh. obliq.-cuneat. papill. and red ben. Germ. 1-winged

18050 Stemless, Lvs. on long succul. downy pets. cord. dply. lbd. and serrat. slightly downy, M. flws. 2 in. in diam. of 8-9 obov. spreading uneq. pets. F. flws. smaller generally 6 pets.

18051 Suffrutic. glabr. Lvs. unequally cord. at base pale and crystalline ben. with promin. reddish veins, Lbs. subacute distantly serrat. with minute bristle on base of each fissure

18052 Lvs. equal-sided orbicular 5-9-lobed serrated cuculiated, Male flowers of 2 sepals and 2 petals, Female flowers of 4 sepals and 4 petals, Wings of fruit nearly equal.

18053 Shrubby, Lvs altern. pet. renif. nrly. eq. at base hispid on both surfs. Lobes acute contort. serrulato-dentic. Stips. oppos. ov. acute invol. herbac.

18054 Lvs. with about 19 lflts. ovate-oblong acuminate argutely serrat. glabr. each with lower side of its base attached the petiole

MONADELPHIA.

* *Cones having the scales without prickles.*

18054

18049 18050 18056

18055 Lvs. 2-5 in. long seldom and but little twisted when young erect when older standing out and curved towards twig, Points prickly [slightly tuberculate ending in very small prickles
18056 Lvs. in pairs very long erect rigid channeled, Sheaths very short, Cone ovate-oblong often recurved, Scales
18057 Lvs. long in tufts at extremities of shoots, Brans. dispersed naked scaly when young, Conical smooth little recurved, Seeds hard [of lvs. Scales dilated in middle unarmed
13513 Bark red, Lvs. in pairs 4 in. to 5 in. long, Cones reddish brown ovate-conical rounded at base and half length

[short. than lvs. 4 in. to 6 in. long and 1½ in. to 2½ in. wide
13508 Lvs. in pairs rigid very long, Cones conical in whorls of 3 4 or even as many as 8 together rarely solit. much

7 chinénsis 9 nóvus hollándicus, syn. *P. nóva-zælánica Ait.* 10 st. helénicus
8 nepalénsis 11 Masson*iánus*

13502 Lvs. in pairs, Cones ov. obt. nrly. as long as lvs. Scales with recurv. deciduous points, Seeds bony with very short wings.

[pairs stalked
13511 Lvs. in pairs very slender, Cones pyramidal rounded at base turned downwards smooth solitary or in

18058 Lvs. in pairs very long slender wavy, Cones sess. crowded ovate smooth, Scales truncate at apex flattish umbilicate

* *Cones hardly so long as the leaves; the scales with prickles.*

13515 Lvs. in threes elongated, Cones often in pairs short. th. lvs. obl. pyramidal rather truncate at apex, Scales with sharp prickles turned inwards [Male cats. elongat. Crest of anth. dilat. and roundish
13518 Lvs. in threes, Cones ov.-obl. in threes or fours much short. th. lvs. Scales terminat. by rough thorny point,
13517 Lvs. in threes very long. Male cats. erect incumbent, Cones ovate, Scales having very small mucros, Seed very small, Wing ½ in. to ¾ in. in length

[termin. in conic. minute recurv. spine
18059 Lvs. in threes much long. than cones flexible tortuous with short sheaths, Cones ov. reflex. Apices of scales

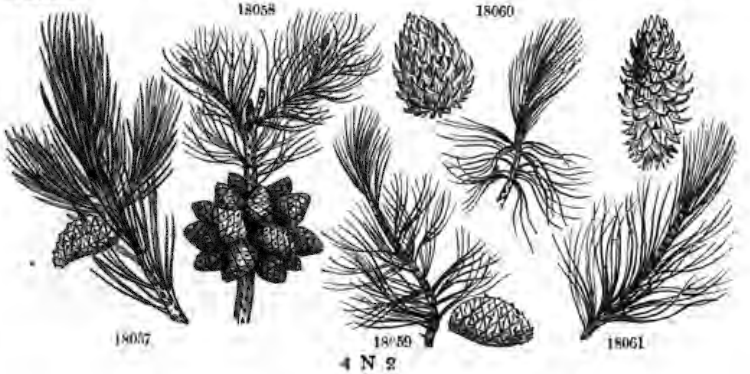
** *Cones having the scales hooked.*

18060 Lvs. in threes very long, Cones ovate echinate very large, Scales long awl-shaped incurved and spiny at apex
18061 Lvs. ditto and compressed, Sheaths ragged, Cones obl. solit. very large, Scales wedge-sh. apex elongat. thickened lanceol. mucron. compress. hooked [thick recurved
13521 Lvs. in threes very long and slender pendul. Sheaths long, Cones ovate-oblong, Scales elevated at apex very

18062 Lvs. in threes short, Sheaths deciduous, Cones ovate-obl. 8 in. long and about 5 in. broad, Scales thick blunt recurved at apex.

13512 Lvs. in threes very long, Male cats. long cylindric. of a tawny blue divergent, Cones very long tessellated with tumid tubercles ending in very small mucros

13520 Lvs. in threes and spreading rough, Crest of anthers round entire, Cones oblong tuberculate



[point
18063 Lvs. in threes sometimes twos very slender, Male cats. short, Cones ovate, Scales truncate at apex without any
18064 Lvs. 3 sometimes 4 in a sheath much twisted varying greatly in length longer than cones grass green, Cones ovate pointed. Scales tuberculate. [dilat. at apex somewh. trapezoid
18065 Lvs. in threes compressed flexuous scabrous, Sheaths about ½ in. long, Cones ovate smoothish drooping, Scales
18066 Lvs. in threes very slender 2-channeled spreading, Sheaths about 1 in. long, Cones ovate-oblong polished

18067 Lvs. short narrow triquetrous slightly twisted glauc. generally in threes often in twos sometimes in fours, Cones conic. pointed, Scales slightly tubercled without prickles

[small mucros
18068 Lvs in fives slender, Sheaths persistent, Cones conical half length of lvs. Scales thickened at apex with very

18069 Lvs. in fives erect triquetrous, Sheaths about 1 in. long persistent, Cones oblong about 9 in. long tuberculate

18070 Lvs. in fives long. erect triquetrous, Sheaths short persistent, Cones ovate 4-5 in. long, Scales tubercled 4-angular

History, Use, Propagation, Culture,

2845. *Picea.* "Some confusion exists in the works of modern authors respecting the silver fir and the spruce; partly, as it would appear, from the circumstance of Linnæus having made an erroneous application of the names given to these trees by Pliny. The tree which Theophrastus calls Elate, Pliny calls Abies, and Linnæus *Pinus Picea*; while the tree that Pliny calls Picea, and which is our spruce fir, is named by Linnæus *Pinus Abies*. The silver fir was esteemed by the Romans for its use in carpentry, and for the construction of vessels. . . . . The wood of the silver fir is elastic, and the colour is whitish. The grain is irregular, as the fibres which compose it are partly white and tender, and partly yellow or fawn-coloured, and hard. The narrower the white lines are, the more beautiful and solid is the grain of the wood. In the Vosges, it is said that the external layers are more compact than the internal ones, which may arise from the practice of barking the trees there before they are cut down. The weight of this wood varies exceedingly, according to the age of the tree, the place where it grew, and even the part of the trunk from which it was taken. According to Hartig, the wood of a tree 80 years old weighs 66 lbs. 14 oz. per cubic foot green, and 41 lbs. 5 oz. when dry; while that of a tree 40 years old weighs only 37 lbs. 9 oz. when dry. It shrinks considerably in drying, like all white woods. It is used for planks, and carpentry of all kinds, for the masts of small vessels, for joists and rafters, and for building the boats for navigating rivers. It is said to endure a long time when used as piles, and to be much employed in Holland for that purpose. In the Vosges it is used in every department of agriculture, carpentry, joinery, and even cabinet-making and sculpture. In England, the wood of the silver fir has been chiefly used for flooring; and, according to Arthur Young, and also to Mitchell, boards sawn out of full-grown trees

18071 Lvs. in fives very slender, Sheaths deciduous, Cones ovate stalked, Scales depressed truncate brown scarious white and torn on the margin

13523 Lvs. in fives, Sheaths deciduous, Cones ov. erect ab. length of lvs. Scales when young pubes. Wings of seed obliterated, Crest of anth. kidney-sh.

13522 Lvs. slender without sheaths. Male cats. small, Cones cylindrical long and pendulous, Cotyledons 6 to 10 [smooth pendulous long. than lvs.
13516 Lvs. in fives very long and slender loose, Crest of anthers roundish truncate simple lacerated, Cones cylindric.
18072 Lvs. in fives rigid roughish, Sheaths very short, Cones thick very (14 in. to 16 in.) long cylindric, Scales loose roundish
18073 Lvs. in fives short smoothish obtuse, Cones cylindrical and smooth about 7 in. long, Scales loose and pointed

18074 Leaves in twos and threes, Cones much longer than the leaves, Sheaths short black

I. *Leaves tetragonal, awl-shaped, scattered in insertion.*

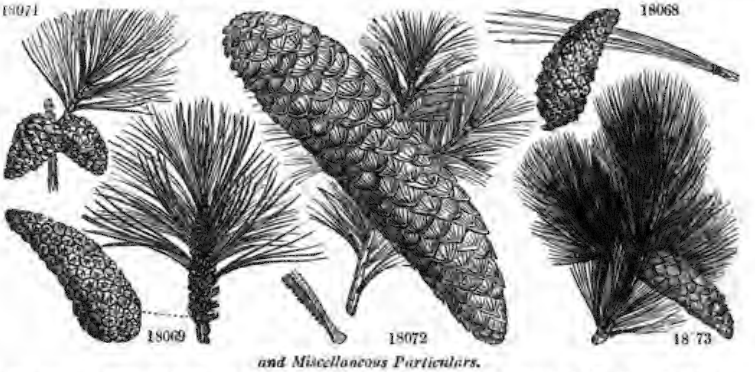
11 monstròsa, syn. *A.* monstròsa *Sm. of Ayr.*

13531 Lvs. somewhat glauc. scattered round the brans. erect quadrangular, Cones obl.-cylind. pendul. lax. Scales with entire margins

13533 Lvs. solit. regularly disposed all round the brans. erect very short somewh. quadrang. Cones ov. pendul. Scales somewh. undulat. crenulat. or divided at apex
13532 Lvs. solit. awl-sh. acuminate, Cones obl. blunt, Scales round somewhat 2-lobed entire [on margin
18075 Lvs. compress. 4-gonal straight awl-sh. sharp-pointed, Cones ov.-obl. Scales obov.-roundish coriac. rigid smooth



13528 Leaves solitary tetragonal, Cones ovate-cylindrical, Scales rhomboid

II. *Leaves flat, generally glaucous beneath, imperfectly 2-rowed.*

18076 Lvs. flat blunt entire pectinate silvery ben. Cones ovate-obl. Bracteas elongated linear 3-pointed, Cones about 4 in. long
18077 Lvs. acute flat silvery ben. turned in every direction, Cones cylindric, Scales scarious gnawed on the margin

13527 Lvs solit. flat slightly denticulate obtuse 2-ranked, Cones oval termin. pendent naked scarcely longer than the leaves
18078 Lvs. subulate flat dark green above silvery ben. terminat. in sharp spine, Petioles very short dilated lengthwise at point of attachment to brans.

†13525 Lvs. solit. flat obtuse 2-ranked points turned up, Cones axill. cylindric. erect, Scales with long dorsal bractea, Anth. with short crest with 2-teeth

and Miscellaneous Particulars.

may be laid down at once, without any risk of their shrinking. As fuel, the wood of the silver fir is to that of the beech as 1079 is to 1540, and that of the spruce as 1079 is to 1211. The charcoal is to that of the beech as 1127 is to 1600. Though the charcoal is much inferior to that of the beech, yet it is preferred for heating iron that is to be forged, as producing the heat more slowly, in consequence of which the iron is more pliant to work. The bark may be employed for tanning leather, and is used generally in some parts of Switzerland. A resinous sap flows from the trunk and branches, called *larmes de sapin*. This sap is bitter, acrid, and viscous, and its smell approaches to that of the citron; it is healing, balsamic, and antiseptic. The resinous fluid is found in small tumours or blisters, under the epidermis of the bark, and in the green cones, from the latter of which it is collected about midsummer. From the resin of this tree are manufactured Strasburg turpentine (so called from a large forest of silver firs, the Hockwald, near Strasburg), colophony, and white pitch. The quantity of potash furnished by the bark and wood is in proportion of 2 lbs. of potash to 1000 lbs. of wood and bark, which places the silver fir in the rank of 21 in a series of 73 ligneous plants. In some parts of Europe, the young cones, reduced by boiling to a pulp, and preserved with sugar, are eaten as a sweetmeat. This conserve is put into tea, to which it is said to communicate an agreeable odour. The leaves serve for bitter; and, in Switzerland, according to Kasthoffer, are given to sheep and goats: but they are said to give the milk a peculiar taste."

"The silver fir, like all the other Abiétinæ, will attain a large size on soils of a very opposite description; but a loam, rather rich and deep than otherwise, appears to suit it best." (*Arb. Brit.*, vol. iv.)

History, Use, Propagation, Culture,

2846. *Gárrya* 18088 *elliptica* is an evergreen hardy shrub, with thick coriaceous leaves, like some species of evergreen viburnum. "This is probably the greatest botanical curiosity sent home by Douglas; for it appears to represent a natural order altogether distinct from any previously known, and connecting certain well-known natural orders in an unexpected and satisfactory manner. In its amentaceous inflorescence, imperfect flowers, superior calyx, and mode of germination, Gárrya is very similar to Cupuliferæ, from which it differs most essentially in its wood without concentric circles or dotted vessels, its opposite exstipulate leaves, simple fruit, and minute embryo lying in a great mass of albumen. The latter characters bring it near Piperáceæ and their allies, especially Chloránthæ, with which its zoneless wood (for Chloránthus has no annual zones), simple fruit, and opposite leaves, also agree; but the stipules

of Chloranthæ, together with its achlamydeous bisexual flowers and articulated stems, distinctly separate that order." (*Bot. Reg.*) "Only the male plant of G. elliptica is in the country. When in flower (which it is from December til. April), the plant has a most striking graceful appearance, from its slender pendulous catkins, many of which are 8 in. to 1 ft. in length. It was at first grown in peat, but appears to prefer a loamy soil. It is readily increased by layers, and by cuttings in sand under a hand-glass." (*Arb. Brit.*, iv. 2031.)

2847. *Rhodiola* 18088 *rosea* is a plant with the habit of Sedum Telephium. It is found on wet rocks, on the mountains of the north of England and Ireland, and in the north-west of Scotland, abundant; likewise on cliffs by the sea-shore. It is the badge of the Highland clan *Gunn*.

assured that the negroes on the farm, who are in the habit of drinking large quantities of this vegetable milk, consider it as highly nutritive; an assertion which startled us the more, as almost all lactescent vegetable fluids are acrid, bitter, and more or less poisonous. Experience, however, proved to us, during our residence at Barbula, that the virtues of the Cow Tree, or *Palo de Vaca*, have not been exaggerated. This fine tree bears the general aspect of the Star-apple Tree (Chrysophyllum *Cainito*); its oblong, pointed, coriaceous, and alternate leaves are about 10 in. long, and marked with lateral nerves, that are parallel, and project beneath. The flower we had no opportunity of seeing; the fruit is somewhat fleshy, and contains one or two kernels. Incisions made in the trunk of the tree are followed by a profuse flow of gluey and thickish milk, destitute of acridity, and exhaling a very agreeable balsamic odour. It was offered to us in calabashes; and, though we drank large quantities of it, both at night before going to bed, and again early in

History, Use, Propagation, Culture,

the morning, we experienced no uncomfortable effects. The viscidity of this milk alone renders it rather unpleasant to those who are unaccustomed to it. The negroes and free people, who work in the plantations, use it by soaking bread in it made from Maize, Manioc, Aropa, and Cassava. Slaves become visibly fatter during the season when the *Palo de Vaca* yields most milk. When exposed to the air, this fluid displays on its surface, probably by the absorption of the atmospheric oxygen, membranes of highly animal nature, yellowish and thready, like those of cheese; which, when separated from the more watery liquid, are nearly as elastic as those of caoutchouc, but in process of time exhibit the same tendency to putrefaction as gelatine. The people give the name of cheese to the curd which thus separates when brought into contact with the air, and say that a space of 5 or 6 days suffices to turn it sour, as I found to be the case in some small quantities that I brought to New Valencia. The milk itself, kept in a corked bottle, had deposited a small portion of coagulum, and, far from becoming fetid, continued to exhale a balsamic scent. When mingled with cold water, the fresh fluid is coagulated with difficulty; but contact with nitric acid produced the separation of the viscous membranes.

"This wonderful tree appears peculiar to the cordillera of the shore, especially from Barbula to the Lake of Maracaybo. Some individual Cow Trees are also said to exist near the village of San Mateo, and likewise in the Valley of Caucagua, three days' journey to the east of Caraccas.

"At Caucagua, the natives call the tree which yields this nutritive fluid, Milk Tree (*Arbol de leche*)."

"The wood forming the body of the trunk is white, very close-grained, and hard, resembling the boxwood of Europe. The soil which these trees inhabit is dark and rich, and must be damp or very wet all the year round." (*Bot. Mag.*)

2851. *Semecárpus* 18108 *Anacárdium* is a lofty tree with spreading branches. Leaves about 18 in. long, and about 4 or 5 broad. Flowers small, of a greenish yellow colour. Receptacle of the fruit when ripe yellow, about the size of the nut, which is black; the cover or shell is composed of 2 laminæ, the inner hard, the outer less so and leathery; between them are cells which contain the black, corrosive, resinous juice, for which this nut has been long known; the juice is of a pale milk-colour till perfectly ripe, when it becomes black. The wood of this tree is reckoned of no use, not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seeds rest are roasted in the ashes and eaten by the natives; their taste is very like that of roasted apples: unroasted, they taste astringent and acrid, leaving a painful sensation on the tongue for some time. The kernels are rarely eaten. The green fruit, well pounded into a pulp, makes good birdlime. The pure, black, acrid juice of the shell is employed by the natives externally to remove rheumatic pains, aches, and sprains: in tender constitutions it often produces inflammation and swelling; but where it has not these effects it is an efficacious remedy. It is employed by the Telinga physicians in the cure of almost every kind of venereal complaint. It is in general use for marking cotton cloths; the colour is improved and prevented from running by a little mixture of quicklime and water. This juice is not soluble in water, and is only

18108 Lvs. oblong bluntish glauc. ben. more or less covered on the nerves beneath with scabr. down, Panicle terminal tomentose

diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalised. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but unites perfectly with them: alkaline lixivium acts upon it with no better success than plain water. (*Don's Mill.*, ii. 63.) Culture, &c., see Melanorrhœa below.

2851. *Melanorrhœa* 18109 *usitâta*. This tree is a native of Hindostan, in a large valley called Kadbbu, in the kingdom of Munipur, Silhet, and Tipperah, as well as in the Burmese empire, on the banks of the Irrawadi, where it is called *Theet-tsee* or *Zit-si*. This is identical with the majestic *Khen* or varnish tree of Munipur, on the north-east frontier districts of Silhet and Tipperah. Mr. M. R. Smith, who has resided a long time in Silhet, considers this the same as the varnish tree of the Chinese, in the eastern and north-eastern provinces. It is procurable in great quantities from Munipur, where it is used for painting river craft, and for varnishing vessels destined to contain liquid. The drug is conveyed to Silhet for sale by the merchants. On being handled it occasions extensive erysipelatous swellings, attended with pain and fever, but never of long duration. In the neighbourhood of Prome a considerable quantity of varnish is extracted from the tree, but very little at Martaban, owing, it is supposed, to the poorness of the soil, and partly also to there being none of the people in that part whose business is to perform the process, although it is very simple. Short joints of a thin sort of bamboo, sharpened at one end, and shut up at the other, are inserted in a slanting direction into holes made in the trunk and principal branches, and left there for 24 or 48 hours; after which they are removed, and their contents emptied into a basket previously varnished over. Sometimes a hundred bamboos may be seen sticking into the tree at once during the collecting season, which last as long as the tree is destitute of leaves, namely, from January until April, and they are renewed as long as the juice will flow. In its pure state it is sold at Prome at the rate of 1 tical, or 2*s.* 6*d.*, the viss; and at Martaban, 2 Madras rupees the viss, although of an inferior quality to that sold at Prome, being usually mixed with oil of sesamum. A tree is reckoned to produce 2 to 3 or 4 viss annually, a viss being equal to 3¼ lb. Every article of household furniture destined to contain solid or liquid food is lacquered over with it. The article to be varnished with it must be prepared with calcined bones, after which the varnish is laid on thinly, either in its pure state, or variously coloured. The process of drying is the most difficult part, being effected in a very slow and gradual manner, by the articles thus varnished being placed in subterraneous vaults for many months. The drug is also used as a size glue in the process of gilding; nothing more being required than to besmear the surface of the article to be gilded with it, and immediately to apply the gold leaf. If it is considered how very extensively that art is practised by the Burman nation, it being among their most frequent acts of devotion and piety to contribute to the gilding of their numerous religious edifices and idols, it will be evident that a great quantity of the drug must be consumed for that purpose alone. Finally, the beautiful Pali writing of the religious order of the Burmas, on ivory, palm leaves, or metal, is entirely done with this varnish in its native and pure state. (*Don's Mill.*, ii. 67.) A mixture of loam and peat will suit this tree; and ripened cuttings will root in sand, under a hand-glass, in heat.

AN

ALPHABETICAL LIST,

COMPREHENDING

SUCH GENERIC NAMES AS ARE NOT TO BE FOUND IN THE BODY OF THIS WORK,

Which Names are either synonymous with some of those already given, or not sufficiently popular to be included in detail in this Supplement.

To this are added their derivations, authorities, and natural orders, the number of the genus to which each should be annexed in the arrangement, and also the numbers of the species with which they are synonymous.

2852 *121*a* ABILDGAA'RD*ia* Vahl. (*Prof. Abildgaard*, of Copenhagen.) monostàchya *Vahl.* Cyperàceæ. A curious perennial bog plant, a native of New Holland, and introduced in 1819.

2853 *2100*a* *ABU'TA* Aub. (*Abutua*, its name in Guiana.) rufèscens *Aub.* Menisperm. A stove climber, attaining the height of 10 ft. It produces yellowish-green flowers, and was introduced from Guiana in 1820.

2854 68 ACÆ'NA *L.* (*Akaina*, a thorn; the berries.) . . . . . Sanguisorb. Syn. Nos. 475. to 482. in p. 26.

2855 *1082*a* ACERA'TIUM *Dec.* (*A*, priv., *keras*, a horn; anthers without.) oppositifòlium *Dec.* Eleocarpàceæ. A stove shrub, a native of Amboyna, whence it was introduced in 1818. It produces white flowers, and thrives in a mixture of peat and loam.

2856 *1565*a* ACHYRO'NIA *W.* (*Achyron*, chaff; branches and leaves chaffy.) villòsa *W.* Leg. Pap. Lot. Gen. A New Holland shrub, producing its yellow flowers in July and August. Introduced in 1819.

2857 1650*a* ACHYRO'PHORUS *D. Don.* (*Achyron*, chaff, *phoreo*, to bear; receptacle.) maculàtus *D. Don.* Comp. Cich. No 11316., also 11315. and 11320.

2858 1029*f* ACIO'TIS *D. Don.* (*Akis*, a point, *ous*, an ear; petals.) . . Melastomàceæ. Nos. 6016. and 5434.

2859 *517*a* ACMADE'NIA *B. & W.* (*Akme*, a point, *aden*, a gland; anthers.) tetragòna *Hil.* Rutàceæ. Adenándra tetragòna *Swt.* A Cape shrub, producing white flowers from April to July. Introduced in 1798.

2860 1117*b* ACME'N*a* Dec. (*Acmena*, a nymph of Venus's.) floribúnda *Dec.* Myrtàceæ. No. 6936. in p. 416.

2861 1281*b* ACROCE'PHALUS *Benth.* (*Akron*, summit, *kephale*, head; flowers.) capitàtus *Benth.* Labiàceæ. No. 8472. in p. 510.

2862 1985*e* ACROCOMIA *Mart.* (*Akros*, top, *kome*, tuft; leaves.) . . . . . Palmàceæ. Nos. 13321. and 13322.

2863 *1975*a* ACROGLO'CHIN *Schr.* (*Akros*, summit, *glochin*, spear point.) chenopodiöides *Schr.* Amarantàceæ. *Amarántus* Acroglòchin *Spr.* An interesting annual, a native of Nepal, producing its green flowers in July and August. Introduced in 1824.

2864 *399*c* ACRO'TRICHA *R. Br.* (*Akros*, a point, *thrix*, hair; corolla.) cordàta *R. Br.* Epacridàceæ. A genus of white-flowered New Holland shrubs, which may be increased by cuttings, and grown in a sandy peat soil.

2865 1804*b* ACTINO'MERIS *Nut.* (*Aktin*, ray, *meris*, part.) squarròsa *Nut.* Comp. Hel. No. 12411., also Nos. 12494. and 12495.

2866 *237*a* ADENA'NTHOS *Lab.* (*Aden*, a gland, *anthos*, a flower.) obovàta *Lab.* Proteàceæ. A shrub producing red flowers. Introduced from New Holland in 1826.

2867 1464*h* ADENOCA'RPUS *Dec.* (*Aden*, a gland, *karpos*, fruit.) . . . Leg. Pap. Lot. Gen. No. 10439. in p. 624.

2868 462*a* ADENO'PHORA *Fis.* (*Aden*, a gland, *phoreo*, to bear.) . . Campanulàceæ. Nos. 2646. 2649. and 2650. in p. 164.

2869 *211*a* ÆGOPO'GON *Hum.* (*Aix*, a goat, *pogon*, a beard.) pusillus *Beauv.* Graminàceæ. A curious little annual grass, a native of South America. Introduced in 1822.

2870 *1328*a* ÆOLLA'NTHUS *Mart.* (*Aiollo*, to vary, *anthos*, flower.) suavèolens *Mart.* Verbenàceæ. A tender annual, producing its white flowers in July and August. It is a native of Brazil, and was introduced in 1825.

2871 1035*b* ÆTHO'N*ia* D. Don. (*Æthon*, one of Phœbus's horses.) fruticòsa *D.Don.* Comp. Cich. No. 11245. also 11281.

2872 *677*a* AGASY'LLIS *Spr.* (Greek name of the gum ammoniac plant.) caucásica *Spr.* Umbelliferæ. Siler caucásicum *Spr.* An uninteresting white-flowered biennial, introduced from Caucasus in 1818.

2873 1741*a* AGATHÆ'A *Cas.* (*Agathos*, excellent; flowers beautiful.) cœléstis *Cas.* Comp. Jacob. No. 12144. also No. 12140.

2874 1627*a* AGATHY'RSUS *D. Don.* (*Agathos*, pretty, *thyrsus*, a thyrse.) sibíricus *D. Don.* Comp. Cich. No. 11116. also 11109, 11110, 11111, 11112, and 11117.

2875 1581*a* *AGA'TI* Rh. (*Agaty*, its name in the Sanscrit language.) grandiflòra *Desv.* Leg. Pap. Lot. Gal. No. 10521. in p. 630.

2876 *244*a* AGNO'STUS *Cun.* (*Agnostos*, unknown; provisional name.) sinuàta *Cun.* ? Proteàceæ. An ornamental evergreen green-house tree, attaining the height of 15 ft. A native of Moreton Bay. Introduced in 1830.

2877 206*a* AGROPY'RUM *Beauv.* (*Agros*, a field, *pyros*, wheat.) . . . . Graminàceæ. Nos. 1238, 1239, 1240. 1242. 1245. p. 70.

156 *AGRO'STIS L.* (The Greek name for all grasses. *Agros*, a field.) spìca vênti *W.* Graminàceæ. Anemagróstis spìca vênti *Trin.* Apèra spìca vénti *Beauv.*

2878 *2034*b* AGYNE'JA *L.* (*A*, priv., *gyne*, woman; neither style nor stigma.) impúbes *L.* Euphorbiàceæ. An uninteresting annual, producing its green flowers in July and August. Introduced from China in 1820.

2879 711*b* A'JAX Haw. (A poetic name; a warrior in siege of Troy.) . . . . . Amaryllàceæ. Nos. 4051. 4050. 4042 4041. 4036, 4037. 4040. 4038. 4048. 4045. 4047. and 4046.

255 *ALCHEMI'LLA L.* (*Alkemelyeh*, its Arabic name.) arvénsis *Sm.* Rosàceæ. A'phanes arvénsis *L.* No. 1519.

2880 *702*b* ALDROVA'NDA L. (*Ulysses Aldrovandus*, an Italian nat.) vesiculòsa *L.* Droseràceæ. A curious little bog plant, produces white flowers, is a native of Italy, and was introduced in 1823.

2881 1586*a* *ALHA'GI* Tou. (Arabic name of the plant.) Maurò rum *Tou.* Leg. Pap. Hed. Euh. No. 10550. in p. 630.

2882 *309*a* ALLIO'*nia* L. (*Charles Allioni*, prof. bot. at Turin.) . . . . . Nyctaginàceæ. A genus of ornamental annuals of whicl two species were introduced from Cumana in 1820; *A. violàcea* and *A. incarnàta.*

2883 *541*c* ALSODE'A *Thou.* (*Alsodes*, leafy.) paucifiòra *Thou.* Violàceæ. A genus of white-flowered shrubs, natives of Madagascar, may be increased by cuttings, and grown in a mixture of peat and loam.

2884 *411*a* ALSTO'*nia* R. Br. (*Dr. C. Alston*, prof. of med. at Edinb.) scholàris *R. Br.* Apocynàceæ. *Nèrium* tinctòrium *Hort.* The species are natives of the East Indies. For other particulars see Alsodèa, above.

2885 2112*a* ALTI'NG*ia* Nor. (*Alting*, some obscure German bot.) excélsa *Nor.* Coniàceæ, No. 14048. in p. 846.

2886 1586*b* ALYSICA'RPUS *Neck.* (*Alysis*, chain, *karpos*, fruit.) . . . . . Leg. Pap. Hed. Euh. Nos. 10551, 10552, 10553. and 10557.

1401 *ALY'SSUM L.* (*A*, priv., *lyssa*, canine madness, sup. med. qual.) marítimum *Lam.* Cruciàceæ. Glỳce marítima *Lindl.*

2887 *411*c* ALY'XIA *R. Br.* (*Alyxis*, anxiety; gloomy appearance.) daphnòides *Cun.* Apocynàceæ. A shrub producing white fragrant flowers. It is a native of the Norfolk Islands, whence it was introduced in 1831. A mixture of peat and loam suits the plant.

2888 *507*a* ALZA'*TEA* R. & P. (*J. A. de Alzate*, a Span. naturalist.) verticillàta *R. & P.* Celastràceæ. A tree, a native of Peru. Introduced in 1824.

2889 *1464*m* AMI'*CIA* H. & B. (*J. B. Amici*, a celebrated physician.) zygómeris *Dec.* Leg. Pap. Hed. Eul A stove climber, introduced from Mexico in 1826.

2890 1552*a* AMPHICA'RPA *Ell.* (*Amphi*, on both sides, *karpos*, fruit; above and under ground.) . . . . . Leg. Pap. Phas. Nos. 10296, 10297. and 10300.

2891 1294*c* AMPHILO'BIUM *Kth.* (*Amphi*, around, *lobos*, a pod.) paniculàta *Kth.* Bignoniàceæ. No. 8535. in p. 314.

2892 *139*a* AMPHIPO'GON *R. Br.* (*Amphi*, around, *pogon*, a beard.) strictus *R. Br.* Graminàceæ. A perennial grass, a native of New Holland. Introduced in 1823.

2893 *1547*a* A'MPHODUS *Lindl.* (*Amphi*, on both sides; *odous*, a tooth.) ovàtus, *Lindl.* Leg. Pap. Phas. A curious perennial stove twiner, produces its purple flowers in July and August, and was introduced from Trinidad in 1820.

2894 726*a* *ANANA'SSA* Thun. (*Nanas*, the name in Guiana.) sativa *B. R.* Bromeliàceæ. No. 4108., also Nos. 4110. and 4119. in p. 246.

2895 *586*a* ANA'NTHERIX *Nut.* (*A*, without, *antherix*, an awn.) viridis *Nut.* Asclepiàceæ. *Asclèpias* viridis *Walt.* A curious little herbaceous plant, producing yellowish green flowers. A native of North America. Introduced in 1812.

2896 2129*b* ANATHE'RUM *Beauv.* (*A*, priv., *ather*, awn; valves of calyx awnless.) mùticum *R. & S.* Graminàceæ. No. 14212. in p. 860.

2897 *241*e* ANCHIE'*TEA* Hil. (*P. Anchietea*, a Brazilian writer on plants.) pyrifòlia *G. Don.* Violàceæ. Calýptrion pyrifòlium *Mart.* An ornamental stove climber, growing to the height of about 3 ft., and producing white flowers in July and August. Introduced from Brazil in 1822.

2898 1516*b* *ANDI'RA Lam.* (Its name in Brazil.) inérmis *H. & B.* Leg. Cæs. Geoff. No. 10029. in p. 604.

2899 *1421*a* ANDREO'*SKIA* Dec. (*Ant. Andrzejowski*, a Russian botanist.) integrifòlia *Dec.* Cruciàceæ. *Sisýmbrium* integrifòlium *L.* A genus of uninteresting annuals and biennials, natives of Siberia.

2900 1499*a* ANDROSÆ'MUM *All.* (*Aner*, a man, *haima*, blood; colour of juice.) officinàle *All.* Hypericàceæ. No. 11000. in p. 656.

2901 1843*a* ANGIA'NTHUS *Wall.* (*Aggos*, a vessel, *anthos*, flower.) aúreus *Wal.* Comp. Echin. No. 12772. in p. 744.

2902 1117*a* ANGO'PHORA *Cav.* (*Aggos*, a vessel, *phoreo*, to bear; form of fruit.) . . . . . *Myrtàceæ.* Nos. 69351 and 6937. in p. 416.

2903 *845*a* ANGUILLA'RIA *R. Br.* (*Anguilla*, an eel; twisted seeds.) índica *R. Br.* Melanthàceæ. A little half-hardy dark-purple-flowered herbaceous plant, a native of Tranquebar, may be increased by division, and grown in a sandy peat soil. Introduced in 1810.

2904 *254*a* ANISACA'NTHA *R. Br.* (*Anisos*, unequal, *akantha*, a spine.) divaricàta *R. Br.* Chenopodiàceæ. A curious New Holland shrub, introduced in 1824; may be increased by cuttings, and grown in a mixture of peat and loam.

2905 107*a* ANISA'NTHUS *Swt.* (*Anisos*, unequal, *anthos*, a flower.) . . . . . Iridàceæ. Nos. 704. and 706. in p. 42.

2906 1282*b* ANISOCHI'LUS *Wall.* (*Anisos*, unequal, *cheilos*, lip.) carnòsa *Benth.* Labiàceæ. No. 8199. in p. 498.

2907 *380*a* ANI'SODUS *Lk.* (*Anisos*, unequal, *odous*, a tooth; cal.) stramonifòlius *G. Don.* Solanàceæ. Whitlèya stramonifòlia *Swt.* An ornamental perennial with yellowish green flowers. A native of Nepal, introduced in 1823.

2908 1401*c* ANODO'NTEA *Dec.* (*A*, destitute, *odontos*, of a tooth; stamens.) . . . . Cruciàceæ. Nos. 9068. 9070 9071, and 9072.

2909 212*b* ANTHE'PHORA *Schreb.* (*Anthos*, a flower, *phoreo*, to bear.) élegans *Schreb.* Graminàceæ. No. 13179. in p. 780.

2910 *2129*g* ANTHISTI'RIA *W.* (*Anthistemi*, to resist; harshness of stubble.) ciliàta *Retz.* Graminàceæ. Andropògon quadrivàlvis *L.*

2911 *420*a* ANTHOCLEI'STA *Afz.* (*Anthos*, a flower, *kleistos*, shut up.) macrophýlla *G. Don.* Apocynàceæ. An evergreen stove tree, attaining the height of 20 ft., and producing white flowers. It is a native of Sierra Leone, was introduced in 1820, and thrives in a mixture of peat and loam.

2912* 83*b* A'NTHODON *R. & P.* (*Anthos*, a flower, *odon*, a tooth.) paniculàtum *Mart.* Hippocràteæ. A stove shrub producing yellowis hgreen flowers. Introduced from Rio Janeiro in 1818, and thrives in a mixture of peat and loam.

2913 *1163*a* ANTHOLO'MA *Lab.* (*Anthos*, a flower, *loma*, a fringe.) montàna *Lab.* Marcgraaviàceæ. A New Holland shrub, introduced in 1810; may be increased by cuttings, and grown in sandy loam.

2914 261*a* ANO'TIS *Dec.* (*A*, priv., *ous*, *otos*, an ear; teeth of cal.) ciliolòsa *G. Don.* Rubiàceæ. Hedyòtis ciliolòsa *Hook.*

2915 1730*c* APHELE'XIS *D. Don.* (*Apheles*, simple, *exis*, habit; plants.) . . Comp. Vern. Nos. 11798. 11807, 11808. and 11810.

2916 769*g* A'PICRA *W.* (*Apikros*, not bitter; unlike bitter aloes.) . . . . Aloíneæ. Nos. 4388. 4405. to 4412. in p. 262.

2917 1553*c* *A'PIOS Boer.* (*Apios*, a pear; form of roots.) tuberòsa *Moen.* Leg. Pap. Phas. No. 10313. in p. 618.

2918 998*a* APLOPHY'LLUM *J.* (*Haploos*, simple, *phyllon*, leaf; lvs. simple.) patavínum *J.* Rutàceæ. No. 8893. also 5891. and 5892.

2919 *2129*e* APLU'DA *L.* (*Apluda* chaff; involucres.) aristàta *L.* Graminàceæ. Andropògon involucràtus *Kion.*

2920 *272*a* AQUA'RTI*a* Jac. (*B. Aquart*, Jacquin's comp. in Amer.) tomentòsa *Jac.* Solanàceæ. A South American shrub producing white flowers. It was introduced in 1819, and requires to be grown in a sandy loam.

2921 *1034*b* AQUILA'RIA *L.* (*Aquila*, an eagle; called Bois d'Aigle by French colonists.) malaccénsis *Lam.* Samydàceæ. A. ovàta *Cav.* An ornamental stove shrub introduced in 1823. It produces greenish yellow flowers, and thrives in a mixture of loam and peat.

2922 664*a* ARCHANGE'LICA *Hoffm.* (Supposed *archangelic* virtues.) officinàlis *Hoffm.* Umbelliàceæ. No. 3677. also 3681. in p. 220.

2923 1019*a* **Arctosta'phylos** *Adan.* Bear's Grape. (*Arktos*, bear, *staphyle*, a grape.) . . . . Ericàceæ. Nos. 5966. and 5967.

2924 920*a* **Aremo'nia** *Dec.* (Changed from *Agrimonia.*) agrimoniöides *Dec.* Rosàceæ. No. 6657. in p. 398.

2925 425*d* **Argá'nia** R. & S. (*Argam*, its aboriginal name.) Sideróxylon *R. & S.* Sapotàceæ. No. 2938. in p. 180.

2926 2006*a* **Arisa'rum** *Tou.* (Adopted from the Greeks.) vulgàre *Kth.* Aràceæ. No. 13477. in p. 800.

2927 *150*a* **Aristi'da** *L.* (*Arista*, an ear of corn.) stipöides *R. Br.* Graminàceæ. A native of New Holland, and was introduced in 1826.

2928 1128*b* **Armeni'aca** *Tou.* (Originally from Armenia.) vulgàris *Lam.* Rosàceæ. No. 7056. also Nos. 7057, 7058. and 7044.

2929 *649*a* **Arraca'cia** Bancroft. (Euphonised from *Arracacha*, its name in Santa Fè.) esculénta *Dec.* Umbellàceæ. Cönium *Arracàcha* Hook.

2930 2132*a* **Arrhenathe'rum** *Beauv.* (*Arrhen*, male, *ather*, point; male spikes awned.) . . . Graminàceæ. Nos. 14227. and 14228. p. 860.

2931 *1353*a* **Artane'ma** *D. Don.* (*Artao*, to append, *nema*, filament; fil. toothed.) fimbriàtum *D. Don.* Scrophulariàceæ. Torèn*ia* scàbra ? *Grah.* An ornamental green-house perennial, producing pale blue flowers from June till August. Introduced from Moreton Bay in 1830.

1721 **Artemi'sia** *L.* (*Artemis*, one of the names of Diana.) campéstris *L.* Comp. Anthem. Oligósporus campéstris *Cass.*

2932 *1578*a* **Arthrolo'bium** *Desv.* Joint-Vetch. (*Arthron*, a joint, *lobos*, a pod; jointed seed-vessel.) ebracteàtum *Desv.* Leg. Hed. Found on "sandy ground near Grand Havre, Guernsey, but rare." — *Hook.*

2933 * **Asagræ'a** *Lindl.* (*Dr. Asa Gray*, one of the auths. of Fl. of N. Amer.) officinàlis *Schl.* Melanthàceæ. Helònias officinàlis *D. Don* is the *Veratrum* officinàle of Schlecht. It is a half-hardy, bulbous-rooted, white-flowered perennial. Introduced from Mexico in 1839.

2934 1680*a* **Ascarici'da** *Cuss.* (*Ascaris*, an intestinal worm, *cædo*, to kill.) anthelmíntica *Swt.* Comp. Vern. No. 11504. in p. 688.

2935 711*d* **Assa'racus** Haw. • (*Assaracus*, a Trojan prince.) . . . . Amaryllàceæ. No. 4027. in p. 240.

2936 *1610*a* **Astarte'a** Dec. (*Astarte*, the Syrian Venus.) fasciculàris *Dec.* Myrtàceæ. Melaleùca fasciculàris *Lab.*

2937 *578*c* **Aste'phanus** *R. Br.* (*A*, without, *stephanos*, crown; stamens.) trifidrus *R. Br.* Asclepiadàceæ. A genus of Cape twiners, two species of which were introduced in 1816; they bear white flowers, and require to be grown in a mixture of peat and loam.

2938 264*a* **Asteroce'phalus** *Vail.* (*Aster*, star, *kephale*, head; seeds.) . . . . Dipsàceæ. No. 1569. to 1594. in p. 69.

2939 1043*a* **Asti'lbe** *Ham.* (*A*, intensive, *stilbe*, brightness.) decándra *D. Don.* Saxifragàceæ. No. 6109. in p. 38.

2940 *1985*g* **Astroca'ryum** *Mey.* (*Astron*, star, *karyon*, nut.) *Murumùru* Mart. Palmàceæ. A palm attaining the height of 40 ft. Introduced from Brazil in 1825.

2941 1578*a* **Astrolo'bium** *Desv.* (*Astron*, star, *lobos*, pod; disposition.) . . . . Leg. Pap. Hed. Cor. Nos. 10511. 10513, and 10514.

2942 1002*e* **Atala'ntia** Corr. (*Atalanta*, the daughter of Schœneus.) monophýlla *Dec.* Aurantiàceæ. No. 5902. in p. 356.

2943 1627*b* **Atala'nthus** *D. Don.* (*Atalos*, soft, *anthos*, a flower.) pinnàtus *D. Don.* Comp. Cich. No. 11151. also 11149. and 11152.

2944 2130*a* **Atheropo'gon** *Mhl.* (*Ather*, awn, *pogon*, beard; awns bearded.) apludöides *W.* Graminàceæ. No. 14218. in p. 860.

2945 *1985*l* **Atherospe'rma** *Lab.* (*Ather*, awn, *sperma*, seed.) moschàta *Lab.* Calycanthàceæ.? A New Holland tree growing to the height of 20 ft., and producing its white flowers in May and June. Introduced in 1824.

2946 1226*a* **Atra'gene** *L.* (A name given by Theophrastus to a species of Clématis.) Ranunculàceæ. Nos. 7963, 7964, and 7965. in p. 482.

2947 *2007*d* **Atta'lea** *Hum.* (*Attalus*, magnificent; trees.) excélsa *Mart.* Palmàceæ. A genus of Brazilian palms, the species varying from 10 ft. to 70 ft. in height.

2948 *62*a* **Audibe'rtia** Benth. (*M. Audibert*, of Tarascon, a nurseryman.) incàna *Benth.* Labiàceæ. Sálvia carnösa *Her. Dou.*

2949 533*d* **Audoui'nia** Brong. (*A. Audouin*, an entomol. and friend of Brongniart.) capitàta *Brong.* Bruniàceæ. No. 2949. in p. 180.

2950 537*a* **Balsami'na** *Riv.* (*Balsamine*, a name used by Dioscorides.) horténsis *Desp.* Balsaminaceæ. No. 3016. also 3017. in p. 134.

2951 *889*a* **Balsamodendron** *Kth.* (*Balsamon*, balsam, *dendron*, tree.) zeylánicum *Kth.* Terebinthàceæ. Amýris zeylánica *Retz.* A tree attaining the height of 30 ft., a native of Ceylon; may be increased by cuttings, and grown in a mixture of peat and loam.

2952 *984*c* **Ba'phia** *Afz.* (*Baphe*, a dye; use.) nítida *Lod.* Leg. Swartzieæ. A tree growing to the height of about 30 ft., and producing white flowers from June to November. It is a native of Sierra Leone, and was introduced in 1793.

2953 *412*a* **Beaumo'ntia** Wal. (*Dìsna*, the lady of Col. T. Beaumont.) grandiflòra *Wall.* Apocynàceæ. An elegant white-flowered stove twiner, a native of the East Indies. Introduced in 1820.

2954 803*a* **Bellevalia** Lap. (*P. R. Belleval*, a French botanist.) operculàta *Lap.* Asphodèleæ. No. 4774. in p. 278.

2955 1749*a* **Bellidia'strum** *Cas.* (*Bellis*, daisy, *astrum*, an affix signifying like.) Michèlii Cas. Comp. Vern. No. 12186. in p. 716.

2956 2136*a* **Ben'nca'sa** Savi. (*Count Benincasa*, an Italian nobleman.) cerífera *Savi.* Cucurbitàceæ. Cucúrbita cerífera *Fis.*

2957 533*c* **Bera'rdia** Brong. (*Berard*, prof. of Chemistry at Montpelier.) . . . . Bruniàceæ. Nos. 2994. and 3006.

2958 503*a* **Berche'mia** Neck. (*M. Berchem*, a French botanist.) . . Rhamnàceæ. Nos. 2894. and 2895. in p. 176.

2959 *1002*d* **Be'rgera** *Kon.* (*C. J. Berger*, prof. of bot. at Kiel.) Konígii Rox. Aurantiàceæ. A curious East Indian shrub, producing its white flowers in June and July. It may be increased by layers, and grown in a mixture of peat and loam.

2960 *1070*a* **Be'rgia** L. (*P. J. Bergius*, M.D., prof. nat. hist. Stockholm.) verticillàta *W.* Caryophýlleæ. A curious little reddish-white-flowered annual, a native of Egypt. Introduced in 1820.

2961 1266*a* **Beringe'ria** Neck. (*Beringer*, probably a man's name.) . . . Labiàceæ. Nos. 8339. 8342, 8343, 8344. 8346, 8347, and 8348.

2962 *1178*a* **Be'rrya** Rox. (*Dr. Berry*, who first introd. it to Calcutta bot. gar.) Amomílla *Rox.* Tiliàceæ. A tree, a native of the East Indies, whence it was introduced in 1818. It thrives in a mixture of peat and loam.

2963 *i196*a* **Berthole'tia** H. & B. Brazil Nut. (*L. C. Bertholet*, a celebrated chemist.) excélsa *H. & B.* Lecythàceæ. A stove tree attaining the height of 100 ft. It is a native of Para, may be increased by cuttings, and grown in a mixture of peat, loam, and sand.

2964 533*a* **Berze'lia** Brong. (*Berzelius*, a celebrated chemist.) . . . . . Bruniàceæ. Nos. 2995. and 3001.

2965 * **Be'ssera** Schultes fil. (*Dr. Besser*, prof. of botany at Brody.) élegans *Lindl.* Liliàceæ. An ornamental bulbous-rooted plant, producing its crimson-coloured flowers from June till October. Introduced from Mexico in 1839.

2966 618*a* BI'FORIS *Spr.* (*Bis*, double, *foris*, a flap; fruit.) testiculàtus *Bieb.* Umbellàceæ. No. 3477. in p. 208.
2967 270*c* BIGELO'VIA Spr. (*Prof. Bigelow*, of N. Amer.) . . . . . Rubiàceæ. Nos. 1649. and 1652. in p. 94.
2968 *1613*a* BILLO'TIA Coll. (*Mad. Tecophila Billoti*, of Turin.) *acer*ôsa *Coll.* Myrtàceæ. A New Holland shrub, producing its red flowers from July till September. Introduced in 1816.
2969 *1428*a* BIVONÆ'A Dec. (*Ant. Bivoni Bernardi*, an Ital. botan.) lùtea *Dec.* Cruciàceæ. *Th*lâspi lùteum *Biv.* An uninteresting little yellow-flowered annual. Introduced from Italy in 1824.
2970 *1301*a* BLE'PHARIS *J.* (*Blepharis*, the eyelashes; bracteas of cal.) capénsis *Pers.* Acanthàceæ. A biennial, introduced in 1818, and producing its blue flowers in July and August.
2971 60*a* BLEPHI'LIA *Raf.* (*Blepharis*, eyelash; sepals fringed?) . . . . Labiàceæ. Nos. 365. and 366. in p. 22.
2972 123*a* BLY'SMUS *Panz.* (*Blusmos*, a source or spring; locality.) compréssus *Panz.* Cyperàceæ. No. 849. in p. 48
2973 1176 BOBA'RTIA L. (*Jacob Bobart*, prof. of bot. at Oxford, 1669.) . . . . . Iridàceæ. Nos. 826. and 831. in p. 48.
2974 *81*b* BOLDO'A Lag. (*D. Boldo*, a Spanish botanist.) purpurâscens *Cav.* Nyctaginàceæ. An herbaceous stove plant, a native of Cuba, whence it was introduced in 1820.
2975 *1437*a* BO'LEUM *Desv.* (*Bolos*, a ball; round pods.) âsperum *Desv.* Cruciàceæ. *V*élla áspera *Pers.* A pretty half-hardy undershrub. Introduced from Spain in 1820, and producing its cream-coloured flowers from May to July.
2976 *39*a* BOLIVA'RIA Schlec. (In honour of the great *Bolivar.*) trífida *Schlec.* Jasminàceæ. An ornamental greenhouse shrub, producing its yellow flowers in July. A native of Chile. Introduced in 1828.
2977 *825*a* BONGA'RDIA Mey. (*H. G. Bongard*, a French botanist.) Rauwólfii Mey. Berberàceæ. *Leóntice* Chrysógonum *L.* A yellow-flowered tuberous-rooted perennial. Introduced from Persia in 1836.
2978 43*a* BONNA'YA Lk. (*Bonnay*, a German botanist.) *veronicæf*ôlia *Spr.* Scrophularineæ. No. 269. in p. 16.
2979 *1190*a* BONNE'TIA Schreb. (*Charles Bonnet*, a Genevese naturalist.) palústris *Vahl.* Guttàceæ. A stove tree, producing red flowers. A native of Trinidad. Introduced in 1819.
2980 *1086*b* BO'SCIA Lam. (*L. Bosc*, Direct. of Roy. Bot. Gard. at Paris.) senegalénsis *Lam.* Capparidàceæ. Podòria senegalénsis *Pers.* A stove shrub introduced in 1824, may be increased by cuttings, and grown in light rich soil.
2981 *1010*a* BOSWE'LLIA ROX. Olibanum Tree. (*Dr. John Boswell*, of Edinburgh.) serràta *Stack.* Terebinthàceæ. A medicinal tree, a native of the East Indies, introduced in 1820. It produces pale yellow flowers, and may be grown in a mixture of loam and peat.
2982 *693*a* BOUSSINGAU'LTIA H. B. & K. (*J. B. Boussingault*, a celeb. naturalist.) *basell*oides *Hum.* Chenopodiàceæ. A whitish-flowered tuberous-rooted green-house plant, a native of South America. Introduced in 1835.
2983 *769*d* BOWIE'A Haw. (*J. Bowie*, a collect. of plants for Kew gar.) myriacántha *Haw.* Hemerocallídeæ. A curious little creeper with yellowish-green flowers, a native of Monte Video. Introduced in 1827.
2984 *658*a* BOWLE'SIA R. & S. (*W. Bowles*, an Irish botanist.) ténera *Spr.* Umbellàceæ.
2985 1731*a* BRACHYLÆ'NA *R. Br.* (*Brachys*, short, *læna*, cloak; calyx.) nereifôlia *Swt* Comp. Vern. No. 11820. in p. 702.
185 BRACHYPO'DIUM *Beauv.* (*Brachys*, short, *pous*, foot.) *l*oliàceum *R. & S.* Graminàceæ. Catapòdium *l*oliàceum *Lk.*
2986 *2032*a* BRADLE'YA Gae. (*Rich. Bradley*, first prof. of bot. Cambridge.) sínica *Gae.* Euphorbiàceæ. A curious stove shrub. Introduced from China in 1816.
2987 *1586*c* BREMONTIE'RA Dec. Sand Wood. (*M. Bremontier*, an agriculturist.) Ammóxylon *Dec.* Leg. Pap. Hed. Euh. A stove shrub, a native of the Mauritius. Introduced in 1826.
2988 646*b* BRIGNO'LIA Bert. (*J. L. Brignoli*, a prof. at Verona.) panacifôlia *Brig.* Umbellàceæ. No. 3601. in p. 216.
2989 *1516*c* BRONGNIA'RTIA H. & B. (*M. Adolphe Brongniart*, a Fr. bot.) podalyriôides Kth. Leg. Geof. A half-hardy undershrub, producing flesh-coloured flowers from September to November. A native of New Spain. Introduced in 1827.
2990 *1175*e* BROWNLO'WIA ROX. (The late *Lady Brownlow*, daughter of Sir A. Hume.) elàta *Rox.* Tiliàceæ. A tree growing to the height of 60 ft., a native of the East Indies, produces yellow flowers, is increased by cuttings, and thrives in sandy loam. Introduced in 1820.
2991 *617*a* BRUNO'NIA Sm. (*Robt. Brown*, Esq., a learned syst. botan.) austràlis *R. Br.* Goodenòviæ. An ornamental blue-flowered New Holland perennial. Introduced in 1834.
2992 1464*r* BRY'A *Br.* (*Bryo*, to sprout, seeds germin. before falling.) *E*'benus *Dec.* Leg. Pap. Dalb. No. 10034. in p. 604.
2993 *1059*a* BUCHANA'NIA ROX. (*T. Buchanan*, now Hamilton, M.D.) angustifôlia *Rox.* Terebinthàceæ. Mangífera axillàris *Lam.* A genus of East Indian trees, producing white flowers, of which two species were introduced in 1820.
2994 *864*a* BUGINVILLÆ'A Com. (*Bougainville*, a Fr. navigator.) spectábilis *J.* Nyctaginàceæ. An ornamental stove climber, growing to the height of 15 ft. and producing pink flowers. Introduced from South America in 1829.
2995 *320*a* BULLIA'RDA Dec. (*M. Bulliard*, a Fr. botanist.) Vaillánti Dec. Crassulàceæ. A curious little aquatic annual, with white flowers, a native of the South of Europe. Introduced in 1825.
2996 1007*a* *BUNCHO'SIA* J. (*Bunchos*, coffee, *Arab*; similar seeds.) . . . . Malpighiàceæ. Nos. 6371. to 6375. and also 6379.
2997 *786*a* BURCHA'RDIA R. Br. (*H. Burchard*, M.D., a bot. author.) umbellàta *R. Br.* Melanthàceæ. A New Holland white-flowered herbaceous plant. Introduced in 1820.
2998 *702*a* BY'BLIS Sal. (*Byblis*, the daughter of Miletus.) *l*inifôra *Sal.* Droseràceæ. A curious little bog plant, producing blue flowers. A native of New Holland, whence it was introduced in 1860.
2999 1054*a* BYRSO'NIMA *Rich.* (*Byrsa*, a hide; used for tanning.) . . . Malpighiàceæ. No. 6380. to 6384. in p. 380.
3000 1548*h* *CAJA'NUS* Dec. Pigeon Pea. (*Catjang*, its name in Malabar.) flàvus *Dec.* Leg. Pap. Phas. No. 10443. in p. 624.
3001 175*a* CALAMAGRO'STIS *Adam.* (*Kalamos*, a reed, *agrostis*, grass.) . . . . Graminàceæ. Nos. 999. 1068. 1069, 1070.
3002 ?1819*a* CALLICE'PHALUS *Mey.* (*Kallos*, beauty, *kephale*, head; flws.) nitens *Mey.* Comp. Cynar. *C*entaurèa nitens *Bieb.* No. 12621. in p. 738.
3003 1635*a* CALLIOPE'A D. Don. (*Calliope*, one of the Muses.) aúrea *D. Don.* Comp. Cich. No. 11186. in p. 672.
3004 *795*a* CALLIPRO'RA *Lindl.* (*Kale*, pretty, *prora*, front; its beauty.) lùtea *Lindl.* Asphodèleæ. An ornamental bulbous-rooted plant, producing its yellow flowers in July. Introduced from New California in 1831?
3005 *662*a* CALLI'SACE *Fis.* (*Kallos*, beauty, *sakos*, a buckler; seeds.) dahùrica *Fis.* Umbellàceæ. An uninteresting green-flowered perennial, a native of Siberia. Introduced in 1816.
3006 892*i* CALLI'STA *D. Don.* (*Kallistos*, most beautiful; flws.) Wálkeri D. Don. Ericàceæ. Type. No. 5217. in p. 308.
3007 1739*a* CALLISTE'MMA *Cas.* China Aster. (*Kallistos*, prettiest, *stemma*, crown; flws.) horténse *Cas.* Comp. Vern. No. 12032. in p. 710.
3008 1117*a* CALLISTE'MON *R. Br.* (*Kallistos*, most beautiful, *stemon*, stamen.) . . . . Myrtàceæ. Nos. 6941. to 6950. (6947. excepted.)
3009 *2018*a* CA'LLITRIS *Ven.* (*Kallos*, beauty; appearance.) quadrivàlvis *Ven.* Conàceæ. A tree attaining the

height of from 15 ft to 20 ft. A native of Barbary. Introduced in 1815, and flowering from February to May.

3010 892*r* CALLU'NA *Sal.* (*Kalluno*, to adorn; flws.) vulgàris *Sal.* Ericàceæ. Type, No. 5268. in p. 310.
3011 1569*e* CALO'PHACA *Fis.* (*Kalos*, beautiful, *phake*, lentil.) wolgárica *Fis.* Leg. Pap. Lot. Gal. No. 10442. in p. 624.
3012 *541*b* CALY'PTRION *Ging.* (*Kalyptra*, a veil, *ion*, a violet.) Aublètii Ging. Violàceæ. *Viola* Hybánchus *Aub.* A climber, a native of Guiana. Introduced in 1823. It produces cream-coloured flowers.
3013 *1126*a* CA'LYTRIX *Lab.* (*Kalyx*, a calyx, *trixos*, triple.) glàbra *R. Br.* Myrtàceæ. A genus of New Holland shrubs which produce white flowers, are increased by cuttings, and grown in sandy peat.
3014 *809*a* *CAMA'SSIA* Lindl. (*Quamash* or *Cumas*, its name in North-West America.) esculénta *Lindl.* Asphodèleæ. *Quamàsia* esculénta *Rafi.* A dark-purple-flowered, hardy, bulbous-rooted plant. Introduced from Columbia in 1827,
3015 765*a* CAMPE'LIA *Rich.* (*Kampe*, a bending, *helios*, the sun.) Zemònia Rich. Commelinàceæ. No. 4372. in p. 260.
3016 *49*a* CAMPYLA'NTHUS *Roth.* (*Kampylos*, a curve, *anthos*, a flower.) salsolòides *Roth.* Primulàceæ. An evergreen green-house shrub, with purplish blue flowers, introduced from Teneriffe in 1825, and requiring to be grown in a sandy peat soil.
3017 1464*q* *CANAVA'LIA* Dec. (*Canavali*, its Malabar name.) ensifórmis *W.* Leg. Pap. Phas. No. 10288. in p. 616.
3018 649*a* CAPNOPHY'LLUM *Gae.* (*Kapnos*, smoke, *phyllon*, a leaf.) africànum *Gae.* Umbellàceæ. No. 3610. *Rùmia* capénsis *Lk.*
3019 729*b* *CARAGUA'TA* Plu. (Its name in South America.) lingulàta *Lindl.* Bromeliàceæ. No. 4138. in p. 248.
3020 *1079*a* *CARA'LLIA* ROX. (*Carallie* in the Telinga lang., in Hindoostan.) lùcida *Rox.* Pomàceæ. An East Indian tree producing yellow flowers. Introduced in 1820.
3021 *989*c* *CARA'PA* Aub. (*Caraipe*, its name in Guiana.) guianénsis *Aub.* Meliàceæ. A tree attaining the height of 20 ft., and producing yellow flowers. Introduced in 1824.
3022 1674*e* CARDUNCE'LLUS *Dec.* (A diminutive of *Cardunculus.*) vulgàris *Dec.* Comp. Cord. No. 11484. also 11483.
3023 *2159*a* CARGILLI*a* R. Br. (*Dr. James Cargill*, of Aberdeen.) láxa *R. Br.* Ebenàceæ. A genus of New Holland trees, growing to the height of about 15 ft., may be increased by cuttings, and grown in a mixture of loam and peat.
3024 1674*a* CARLOWI'*zia* Moen. (*Carlowiz*, some obscure botanist.) salicifòlia *Moen.* Comp. Card. No. 11478. in p. 686.
3025 1602*a* CARMICHA'*lia* R. Br. (*Capt. Dugald Carmichael*, F.L.S.) austràlis *R. Br.* Leg. Pap Lot. Trif. No. 10850. in p. 644.
3026 *414*b* CARPODI'NUS *R. Br.* Sweet Pishamin. (*Karpos*, a fruit, *dinos*, a circle; round fruit.) dúlcis *G. Don.* Apocynàceæ. A native of Sierra Leone, introduced in 1822. It produces green flowers, and thrives in a mixture of peat and loam.
3027 *1212*b* CARPODO'NTOS *Lab.* (*Karpos*, a fruit, *odontotos*, toothed.) lùcida *Lab.* Hypericàceæ. A tree, a native of New Holland, whence it was introduced in 1820.
3028 594*h* CARUNCULA'RIA *Haw.* (*Caruncula*, fleshy protuberance; fl.) pedunculàta *Haw.* Asclepiàceæ. No. 3339. in p. 202.
3029 1999*a* CA'RYA *Nut.* (*Karyon*, a nut.) . . . . . Juglandàceæ. Nos. 13378. to 13384.
3030 *1205*a* CARYO'CAR *L.* Butter Nut. (*Karyon*, a nut; bearing nuts.) tomentòsum *W.* Rhizobolàceæ. *Pèkea* sp. *Aub.* A genus of fruit-bearing trees growing to the height of about 100 ft. Natives of Guiana.
3031 *1034*a* CASEA'RIA L. (*J. Casearius*, cooperator in Hort. Malab.) ramiflòra *Vahl.* Samydàceæ. *Iroucàna* guianénsis *Aub.* A genus of stove shrubs, producing greenish yellow flowers, may be increased by cuttings and grown in sandy loam.
3032 1016*b* CASSA'NDRA D. Don. (*Cassandra*, the daughter of Priam and Hecuba.) calyculàta *D. Don.* Ericàceæ. No. 5959. in 360.
3033 1016*a* CASSI'OPE D. Don. (*Cassiope*, the mother of Andromeda.) *hypnòides D. Don.* Ericàceæ. No. 5938. in p. 358.
3034 *877*a* CASTE'LA Turp. (*M. Castel*, author of a poem upon plants.) erécta *Turp.* Rhamnàceæ. A West Indian shrub, introduced in 1825, is increased by cuttings, and may be grown in a mixture of peat and loam.
3035 170*a* CATABRO'SA *Beauv.* (*Katabrosis*, food.) aquática *Beauv.* Graminàceæ. No. 1041. in p. 58.
3036 2014*a* CE'DRUS *Barrl.* (*Cedron*, a brook in Judea; plentiful on its banks.) Libàni *Barrl.* Coniàceæ. No. 13537. in p. 806.
3037 174*a* CENTOTHE'CA *Desv.* (*Kenteo*, to prick, *theke*, a sheath.) lappàcea *Desv.* Graminàceæ. No. 914. in p. 52.
3038 892*c* CERA'MIA *D. Don.* (*Keramion*, a little pitcher.) urceolàris *D. Don.* Ericàceæ. Type, No. 5354. in p. 314.
3039 *541*d* CERANTHE'RA *Beauv.* (*Keras*, a horn, *anthera*, an anther.) subintegrifòlia *Beauv.* Violàceæ. An ornamental shrub with white flowers, a native of Guiana. Introduced in 1824.
3040 1129*a* CE'RASUS *J.* (Originally from *Cerasus*, a town of Pontus in Asia.) . . . . Rosàceæ. Nos. 7026. to 7043. and also 7048, and 7049. 7053, 7054, and 7055.
3041 2019*b* CERATOSA'NTHES *Brm.* (*Keras*, horn, *anthos*, fl.; inner segms.) tuberòsa *J.* Cucurbitàceæ. No. 13554. in p. 808.
3042 *141*a* CERE'S*ia* Pers. (*Ceres*, a goddess; inventress of tillage.) élegans *Pers.* Graminàceæ. *Páspalum* membranàceum *Flug.* An ornamental grass, introduced from Peru in 1816.
3043 1660*a* CESTRI'NUS Cass. (*Cestrinus*, the son of Helenus and Andromache.) *carthamoides Cass.* Comp. Card. No. 11460. in p. 684.
3044 *150*b* CHÆTA'RIA *Beauv.* (*Chaite*, an awn or bristle.) hýstrix *Beauv.* Graminàceæ. An uninteresting East Indian plant, introduced in 1820.
3045 1552*a* CHÆTO'CALYX *Dec.* (*Chaite*, bristle, *kalyx*, calyx; teeth.) vincentìna *Dec.* Leg. Pap. Lot. Clit. No. 10310. in p. 618.
3046 119*a* CHÆTO'SPORA *R. Br.* (*Chaite*, a bristle or awn, *spora*, a seed.) ferruginea *Hum.* Cyperàceæ. No. 848. in p. 48.
3047 *615*a* CHAILLE'TI*a* Dec. Rat Poison. (*M. Chaillet*, a Swiss botanist.) Toxicària *G. Don.* Chailletiàceæ. A poisonous shrub, a native of Sierra Leone, introduced in 1824, produces white flowers, and requires to be grown in a mixture of peat and loam.
3048 2085*c* CHAMÆLI'RIUM *W.* (*Chamai*, ground, *leirion*, lily.) caroliniànum *W.* Melanthàceæ. No. 4984. in p. 292.
3049 *552*a* CHAMISSO'*a* H. & B. (*M. Chamisso*, who accompanied Kotzebue.) altíssima *H. & B.* Amarantàceæ. Achyránthes altíssima *L.* An evergreen shrub, growing to the height of about 5 ft., produces yellow flowers, is a native of Jamaica, and was introduced in 1816.
3050 1271*a* CHASMO'NIA *Lindl.* (*Chasmao*, to gape wide; calyx.) incisa *Lindl.* Labiàceæ. No. 8378. in p. 506.
3051 *1463*a* CHEIROSTE'MON *H. & B.* (*Cheir*, hand, *stemon*, a stamen.) *platanòides H. & B.* Bombàceæ. A stove tree, a native of New Spain, whence it was introduced in 1820.
165 CHILO'CHLOA *Beauv.* (*Chilos*, fodder, *chloa*, grass.) arenària *Schr.* Graminàceæ. A'chnodon arenàrius *Trin.* No. 1030.
3052 1294*f* CHILO'PSIS *D. Don.* (*Cheilos*, a lip, *opsis*, resemblance; flower.) salígna *D. Don.* Bignoniàceæ. No. 8557. in p. 514.
3053 1029*b* CHITO'NIA *D. Don.* (*Chiton*, a coat of mail; calyx scaly.) . . . . . Melastomàceæ. Nos. 6013. and 6014. in p. 364.

3054 711*n* CHLORA'STER *Haw.* (*Chloros*, green, *aster*, a star; corona.) fissus *Haw.* Amaryllàceæ. No. 4019. in p. 240.

3055 *989*a* CHLORO'XYLON *Dec.* (*Chloros*, green, *xylon*, wood.) Swietènia Dec. Meliàceæ. Swietènia Chloróxylon *Rox.* A timber tree attaining the height of 100 ft., a native of the East Indies. Introduced in 1820.

3056 *999*a* CHOI'SYA H. & B. (*J. D. Choisy*, a Genevese botanist.) ternàta *H. & B.* Rutàceæ. An ornamental stove shrub, a native of Mexico. Introduced in 1825. It produces white flowers in July and August, and thrives in a mixture of loam and peat.

3057 892*l* CHO'NA *D. Don.* (*Chone*, a funnel; figure of cor.) sanguínea *D. Don.* Ericàceæ. Type, No. 5171. in p. 306.

3058 2131*a* CHRYSOPO'GON *Trin.* '*Chrysos*, gold, *pogon*, beard; yellow.) gr*y*llus *Trin.* Graminàceæ. No. 14224. in p. 860.

3059 1804*d* CHRYSOSTE'MMA *Lessing.* (*Chrysos*, gold, *stemma*, crown; flws.) trípteris *Lessing.* Compósitæ. No. 12482. in p. 732.

176 CHRYSU'RUS *P. S.* (*Chrysos*, gold, *oura*, a tail; the flowers.) echinàtus *P. de B.* Graminàceæ. Phalòne echinàta *Dumort.*

3060 *458*b* CINCHO'NA L. (Cured *Countess of Cinchon* of a fever.) officinàlis *L.* Rubiàceæ. A medicinal tree, introduced from Peru in 1810. It produces red flowers, and requires to be grown in a mixture of loam and peat.

3061 934*z* CINNAMO'MUM *R. Br.* (*Kinamon*, cinnamon, *Arab.*) vèrum *Swt.* Lauràceæ. No. 5640. also Nos. 5641, 5642, 5643, and 5647.

†1665 CI'RSIUM *Vahl.* (*Kirkos*, a swelled vein; supposed to heal.) . . . . . Comp. Card. The genus CNI'CUS in p. 682.

3062 *1778*a* CLADA'NTHUS *Cas.* (*Klados*, a branch, *anthos*, a flower; on bran.) arábicus *Cas.* Comp. Anth. No. 12334. in p. 724.

3063 554*a* CLADO'STACHYS *D. Don.* (*Klados*, a branch, *stachys*, a spike.) . . . . Amarantàceæ. Nos. 3144. and 3145. p. 192.

3064 * 004*a* *CLAUSE'NA* Brm. (Not explained.) pentaph*y*lla *Dec.* Aurantiàceæ. *Limonia* pentaph*y*lla *Herb. Lam.*

3065 *1175*b* CLEY'ERA Thun. (*A. Cleyer*, M.D., a German botanist.) japónica *Thun.* Ternstrœmiàceæ. A greenhouse shrub, introduced in 1820, may be increased by cuttings, and grown in sandy peat.

3066 1029*c* CLIDE'MIA D. Don. (*Clidemius*, an ancient Greek botanist.) . . . . . Melastomàceæ. Nos. 6004. and 6007. in p. 364.

3067 1944*a* CNEMIDO'STACHYS *Mart.* (*Cnemis*, spoke of wheel; *stachys*, spike.) Chamelæ'a *Spr.* Euphorbiàceæ. No. 13057. in p. 774.

1665 *CNI'CUS L.* (*Knizo*, to prick, or wound.) lanceolàtus *W.*, Eriólepis lanc. *Cass.*; palústris *L.*, Onótrophe palústris *Cass.* Comp. Card.

3068 1493*a* COCHLOSPE'RMUM *Kth.* (*Kochlo*, to twist, *sperma*, seed.) Goss*y*pium *Kth.* Bombàceæ. Bómbax Goss*y*pium *L.*

3069 1290*a* CODONO'PHORA *Lindl.* (*Kodon*, a little bell, *phoreo*, to bear.) lanceolàta *Lindl.*; grandiflòra *Lindl.* Gesneràceæ. No. 8521. and No. 8524. in p. 512.

3070 *1322*a* COLEBROO'KEA Sm. (*H. T. Colebrooke*, an accomplished botanist.) oppositifòlia *Sm.* Verbenàceæ. A white-flowered shrub, a native of Nepal, whence it was introduced in 1820.

3071 *2032*b* *COLLIGUA'JA* Mol. (Its native name.) odorífera *Mol.* Euphorbiàceæ. A greenish-yellow-flowered shrub, a native of Chile. Introduced in 1831.

3072 *836*b* COLOPHO'NIA *Kth.* (Yielding a resin like *Colophon.*) mauritiàna *Kth.* Terebinthàceæ. A purple-flowered stove tree, introduced in 1826.

3073 510*a* COLUBRI'NA *Brong.* (*Coluber*, a snake; twisted stems.) ferruginòsa *Brong.* Rhamnàceæ. No. 2870. also Nos. 2871. 2889. and 2922.

3074 569*a* COMA'NDRA *Nut.* (*Kome*, hair, *aner*, an anther.) umbellàta *Nut.* Santalàceæ. No. 3187. Hamiltònia umb. *Spr.*

3075 1151*a* COMARO'PSIS *Rich.* (*Comarum*, marsh cinquefoil, *opsis*, appearance.) ragariöides *Dec.* Rosàceæ. No. 7576. in p. 452.

3076 *506*a* CONDA'LIA Cav. (*A. Condal*, a Spanish physician.) microph*y*lla *Cav.* Rhamnàceæ. Zizyphus myrtoides *Or.* A curious half-hardy shrub, with green flowers. A native of Chile. Introduced in 1824.

3077 673*c* CONDYLOCA'RPUS *Hofm.* (*Kondyle*, a knob, *karpos*, fruit.) officinàlis *Koch.* Umbellàceæ. No. 3738. also 3740.

3078 *1959*a* CONOCE'PHALUS *Blume.* (*Konos*, a cone, *kephale*, head; form.) naucleiflòrus *Lindl.* Urticàceæ. *Urtica* naucleiflòra *Rox.* A curious stove shrub, growing to the height of 10 ft., and producing its yellow flowers at all seasons. Introduced from Chittagong in 1820.

3079 621*a* CONOPO'DIUM *Koch.* (*Konos*, a cone, *podion*, a little foot; disk.) . . . . . Umbellàceæ. Nos. 3490. and 3491. in p. 210.

3080 *720*b* CONO'STYLIS *R. Br.* (*Konos*, a cone, *stylos*, a style.) aculeàta *R. Br.* Hæmodoràceæ. A genus of New Holland herbaceous plants, requiring to be grown in a sandy peat soil.

3081 711*a* CORBULA'RIA *Haw.* (*Corbula*, a small basket; form of corona.) . . . . . Amaryllàceæ. Nos. 4030, 4031. 4034. and 4033.

3082 *814*a* CORDYLI'NE *R. Br.* (*Kordyle*, a club.) hemichr*y*sa *Com.* Asphodèleæ. A stove shrub, a native of Bourbon, introduced in 1823. It may be increased by suckers, and grown in vegetable soi .

3083 2045*a* CORE'MA *D. Don.* (*Korema*, a broom; habit of plant.) álba *D. Don.* Empetràceæ. No. 13821. in p. 826.

3084 1744*a* CORVISA'RTia Merat. (*M. Corvisart*, a man's name.) Helènium Merat. Comp. Vern. No. 12147. in p. 714.

3085 76*a* CORYCA'RPUS *Zea.* (*Korys*, a helmet, *karpos*, a fruit.) arundinàceus. Graminàceæ. No. 1108. in p. 62.

3086 *510*a* CORYNOCA'RPUS *Forst.* (*Koryne*, a club, *karpos*, fruit.) lævigàtus *Forst.* Myrsinàceæ. An evergreen tree, introduced from New Zealand in 1823. It may be increased by layers, and grown in a light rich soil.

3087 *2085*a* COSCI'NIUM *Col.* (*Koskinion*, a little sieve; cotyledons perforated.) fenestràtum *Col.* Menispermàceæ. Menispérm. fenestrát. *Gal.* A stove climber, growing to the height of about 10 ft., and producing greenish-yellow flowers. Introduced from Ceylon in 1800.

3088 *978*b* COULTE'RIA Kth. (*Dr. Coulter*, a botanical author.) tinctòria *Dec.* Leg. Cæs. Cass. Poinciàna Túrra R. & P. An ornamental shrub, producing orange-coloured flowers. A native of Carthage, whence it was introduced in 1822.

3089 280*a* *COUTOU'BEA* Aubl. (Its name in Guiana.) spicàta *Aubl.* Gentianàceæ. No. 1727. in p. 98.

3090 *1159*a* COWA'NIA D. Don. (*James Cowan*, an English merchant.) plicàta *D. Don.* Rosàceæ. A pretty evergreen shrub, producing red flowers in June. It is a native of Mexico.

3091 1300*a* CRANIOLA'RIA *L.* (*Kranion*, a skull; supposed resemblance in capsule.) ánnua *L.* Sesàmeæ. No. 8577. in p. 516.

3092 *603*a* CRE'SSA *L.* (*Cressa*, a native of Crete; abounds there.) erética *L.* Convolvulàceæ. A curious little trailing annual with purple flowers. A native of the Levant. Introduced in 1822.

3093 2032*a* *CROZO'PHORA* Neck. (Not explained.) tinctòria *L.* Euphorbiàceæ. No. 13629. in p. 812.

3094 *542*a* CRYPTA'NDRA *Sm.* (*Kryptos*, hidden, *aner*, a man; stamens.) ericifòlia *Sm.* Rhamnàceæ. A genus of curious shrubs natives of New Holland. They produce white flowers, and require a sandy peat soil.

3095 934*c* CRYPTOCA'RYA *R. Br.* (*Kryptos*, hidden, *karya*, a nut.) glaucéscens *R. Br.* Lauràceæ. A genus of

New Holland trees, growing to the height of about 15 ft., and producing their white flowers from April to June.

3096 *411*b* CRYPTO'LEPIS *R. Br.* (*Kryptos*, hidden, *lepis*, a scale.) élegans *Lod.* Apocynàceæ. An ornamental stove twiner, a native of Brazil, whence it was introduced in 1824.

3097 1701*a* CULCI'TIUM *Bonp.* (*Culcita*, a stuffed bed; heads of paleæ.) salícinum *Spr.* Comp. Jac. No. 11615. in p. 692.

†2010 CUNNINGHA'MIA R. Br. (*J. & A. Cunningham*, travellers in N. S. W.) lanceolàta *R. Br.* Conàceæ No. 13499. in p. 802.

3098 *882*a* CUPA'NIA L. (*Father Franc. Cupani*, an Italian Capuchin.) . . . . . Sapindàceæ. A genus of stove trees and shrubs, producing white or nearly white flowers; the species may be increased by cuttings, and will thrive in a mixture of peat and loam.

3099 699*c* CURTO'GYNE *Haw.* (*Kurtos*, curved, *gyne*, a style.) undulàta *Haw.* Crassulàceæ. No. 3882. in p. 230.

3100 *1464*k* CYAMOPSIS *Dec.* (*Kyamos*, bean, *opsis*, resemblance.) psoraleöides *Dec.* Leguminòsæ Pap. Lot. Clit. Dólichos psoraleöides *Lam.* Dólichos fabæfórmis *Herit.* Psoràlea tetragonólobus *L.* Lupinus trifoliàtus *Cav.* An annual, a native of Arabia, and produces its purple flowers in July and August. Introduced in 1813.

3101 765*b* CYANO'TIS *D. Don.* (*Kyanos*, blue, *ous*, an ear.) cristàta *D. Don.* Commelinàceæ. No. 4371. in p. 260.

3102 *401*a* CYATHO'DES *Lab.* (*Kyathos*, a cup, *eidos*, like; nectary.) Oxýcedrus *R. Br.* Epacridàceæ. Styphèlia Oxýcedrus *Lab.* An evergreen shrub, a native of Van Diemen's Island. Introduced in 1822.

3103 2004*a* CYCLA'NTHUS *Poit.* (*Kyklos*, a circle, *anthos*, a flower.) Plumièri Poit. Aràceæ.

3104 2129*c* CYMBOPO'GON *Spr.* (*Kymbe*, boat, *pogon*, beard; valves of calyx.) Schœnánthus *Spr.* Graminàceæ. No. 14210. in p. 860.

3105 904*a* CYMINO'SMA *Gae.* (*Kyminon*, cumin seed, *osme*, smell.) pedunculàta *Dec.* Rutàceæ. No. 5493. in p. 320.

3106 808*a* CZA'CKIA Andr. (*Andrzeouskii Czack*, a Russian bot.) Liliástrum *Andr.* Asphodèleæ. No. 4825. in p. 280.

3107 1016*h* DABŒ'CIA D. Don. (Called in Ireland *St. Dabeoc's Heath.*) polifòlia *D. Don.* Ericàceæ. No. 5412. in p. 316.

3108 *2016*a* DACRY'DIUM *Sol.* (*Dakry*, a tear; gummy exudation.) cupréssinum *Sol.* Conàceæ. Thalàmia cupréssina *Spr.* A New Zealand tree, growing to the height of about 20 ft., and was introduced in 1825.

3109 *1503*a* DACTYLICA'PNOS *Wall.* (*Daktylos*, finger, *kapnos*, fumitory; berries.) thalictrifòlia *Wall.* Fumariàceæ. Diélytra scándens *Don.* A half-hardy climber, producing its yellow and brown flowers from August to October. Introduced from Nepal in 1831.

3110 *2156*a* DALRY'MPLEA ROX. (*Alex. Dalrymple*, auth. Oriental Repertory.) pomífera *Rox.* Celastràceæ. Turpínia pomífera *Dec.* A shrub, a native of Nepal. Introduced in 1820, and thrives in sandy loam.

†2011 *DAMMARA* Rum. (Its name in Amboyna.) orientàlis *Lamb.* Conàceæ. No. 13500., also 13501.

3111 569*e* DARLINGTO'NIA Dec. (*Dr. Darlington*, an American botanist.) . . . . . Leguminàceæ. Nos. 14166. and 14167. in p. 858.

3112 892*n* DASYA'NTHES *D. Don.* (*Dasys*, hairy, *anthos*, flower; cor. hairy.) Sparrmánni D. Don. Ericàceæ: Type, No. 5146. in p. 306.

3113 *1581*c* DAUBENTO'NIA Dec. (*M. Daubenton*, a celebrated naturalist.) punícea *Dec.* Leg. Pap. Lot. Gal. Æschynómene miniàta *Or.* An ornamental stove shrub, producing its vermilion-coloured flowers in July and August. Introduced from New Spain in 1820.

3114 1034*b* DE'CODON *Gen.* (*Dekas*, ten, *odous*, a tooth; calyx.) verticillàtus *Ell.* Salicàceæ. No. 6640. in p. 398.

3115 *1191*a* DELI'MA *L.* (*Delimo*, to shave off; lvs. used for polishing.) sarmentòsa *L.* Dilleniàceæ. Tetrácera sarmentòsa *Vahl.* A yellow-flowered stove climber, a native of Ceylon. Introduced in 1820.

3116 170*b* DESCHA'MPSIA Beauv. (*M. Deschamps*, M. D., a French bot.) . . . . . Graminàceæ. Nos. 1042, 1043. and ?1045.

3117 892*d* DE'SMIA *D. Don.* (*Desme*, a little bundle; flowers crowded.) confèrta *D. Don.* Ericàceæ. Type, No. 5332. in p. 312.

3118 1580*d* DESMO'DIUM *Dec.* (*Desmos*, band; stams. joined?) . . . . . Leg. Pap. Hed. Euh. Nos. 10554, 10555, 10556. 10558. 10560, 10561. 10563. 10566. to 10580. 10582., and 10600.

3119 *1985*f* DESMO'NCUS *Mart.* (*Desmos*, band, *ogkos*, hook; tendrils at apex of lvs.) polyacánthus *Mart.* Palmàceæ. A genus of palms which grow to the height of about 6 ft.

3120 *?29*n* DESVAU'XIA R. Br. (*N. Desvaux*, a French botanist) Billardièri Ait. Desvauxiàceæ. A tender annual, introduced from New Holland in 1823.

3121 *1367*a* DIA'SCIA *Lk.* (*Dis*, two, *askion*, little bladder; two protuberances at base of cor.) Bergiàna Lk. Scrophulariàceæ. An uninteresting little annual, introduced from the Cape in 1815.

3122 *1082*b* DI'CERA *Forst.* (*Dis*, double, *keras*, a horn; anth. 2-horned.) dentàta *Forst.* Elæocarpàceæ. Eriostèmon dentàtus *Col.* A green-house shrub, a native of New Zealand, and produces its white flowers in July. Introduced in 1810.

3123 1580*e* DICE'RMA *Dec.* (*Dis*, twice, *herma*, prop; bracts at cal. base.) . . . . . Leg. Pap. Hed. Euh. Nos. 10548. and 10562.

3124 *1464*f* DICHI'LUS *Dec.* (*Dis*, twice, *cheilos*, lip; calyx.) lebeckiöides Dec. Leg. Pap. Lot. Gen. A yellowish-white-flowered Cape shrub, introduced in 1826.

3125 *517*a* DICHO'SMA *Dec.* (*Dicha*, without, *osme*, smell.) bífida *Dec.* Rutàceæ. Diósma bífida *Jac.* An ornamental white-flowered Cape shrub.

3126 *1443*a* DIDE'SMIS *Desv.* (*Dis*, twice, *desmos*, band; silicles of two joints.) bipinnàtus *Dec.* Cruciàceæ. Sinàpis bipinnàta *Desf.* An uninteresting annual, a native of N. Africa; introduced in 1827, and produces its white flowers in June and July.

3127 2004*b* DIEFFENBA'CHIA Bot. (*M. Dieffenbach*, a German botanist?) seguínum *Bot.* Aràceæ. No. 13451. in p. 798.

3128 143 DIGITA'RIA *Sco.* (*Digitus*, a finger; heads being fingered.) sanguinàlis *P. S.* Graminàceæ. Syntherisma vulgàre *Schreb.*

3129 168*a* DI'GRAPHIS *Trin.* (*Dis*, twice, *grapho*, to mark.) arundinàcea *Trin.* Graminàceæ. Baldingera arundinàcea *Dum.* No. 1032. in p. 58.

3130 *387*c* DINE'TUS *Swt.* (*Dinetos*, that may be twined.) racemòsa *Swt.* Convolvulàceæ. Poràna racemòsa *Rox.* A white-flowered twining annual, introduced from Nepal in 1823.

3131 *1548*e* DIO'CLEA Kth. (*Diocles Carystinus*, an ancient Greek botanist.) móllis *Dec.* Leg. Pap. Phas. Dólichos móllis *Jac.*

3132 *270*a* DIO'DIA *L.* (*Diodos*, a journeying; wayside plant.) virgínica *L.* Rubiàceæ. A genus of curious little trailers, mostly natives of the West Indies.

3133 711*g* DIOME'DES Haw. (A Grecian hero at the siege of Troy.) . . . . . Amaryllàceæ. Nos. 4009. 4043.

3134 1797*a* DIOME'DIA Cas. (*Diomeda*, daughter of Phorbas.) glabràta *Kth.*, No. 12426. in p. 728.; bidentàta *Cas.* No. 12425. Comp. Helian.

3135 *1577*b* DI'PHACA *Lou.* (*Dis*, double, *phake*, a lentil; two seeds in a pod.) còchin-chinénsis *L.* Leg. Pap. Hed. Euh. Dalbérgia Diphaca *Per.*

3136 *1569*b* DIPHY'SA *Jac.* (*Dis*, double, *physa*, bladder; inflated append. to pod.) carthagenénsis *Jac.* Leg. Pap. Lot. Gal. An ornamental yellow-flowered stove shrub. Introduced in 1827.

3137 *136*a* DIPLA'ZIA *Rich.* (*Diplazo*, to double; the glumes.) karatifòlia *Rich.* Cyperàceæ. An uninteresting stove plant, a native of Guiana. Introduced in 1825.

3138 * DIPLOLÆ'NA *Desf.* (*Diploos*, double, *læna*, cloak; double involucrum.) Dampièr*i* Desf. Rutàceæ. A curious green-house shrub, growing to the height of about 4 ft. Introduced from the Swan River in 1837.

3139 *580*a* DIPLO'LEPIS *R. Br.* (*Diploos*, double, *lepis*, a scale.) . . . . . Asclepiàceæ. A genus of uninteresting twiners, with green flowers, natives of China.

3140 * DIPLOPE'LTIS *Endl.* (*Diploos*, double, *pelte*, a shield; bilamellate disc.) Hugèl*ii* Endl. Sapindàceæ. A white-flowered under-shrub. Introduced from the Swan River in 1837.

3141 *40*a* DIPLOPHY'LLUM *Leh.* (*Diploos*, double, *phyllon*, a leaf.) *veronicæ*fórme *Leh.* Scrophular. *Verónica* Crista-Gálli *Stev.* A curious trailing annual with blue flowers, a native of Caucasus. Introduced in 1813.

3142 *2007*a* DIPLOTHE'MIUM *Mart.* (*Diploos*, double, *thema*, spathe.) maritima *Mart.* Palmàceæ. A palm growing about 10 ft. high. Introduced from Brazil in 1823.

3143 1459*b* DISE'MMA *Lab.* (*Dis*, double, *stemma*, a crown; crown double.) Herbert*iana* Dec. Passifloràceæ. Nos. 9426. and 9427.

3144 *420*b* DISSOLÆ'NA *Lou.* (*Dis*, double, *solen*, a tube; tube of corolla.) verticillàta *Lou.* Apocynàceæ. Cérber*a* chinénsis *Spr.* An ornamental green-house shrub, a native of China. Introduced in 1812.

3145 *1191*b* DOLIOCA'RPUS *Rol.* (*Dolios*, deceitful, *karpos*, fruit; poisonous.) *Calinèa* Gm. Dilleniàceæ. *Calinèa* scándens *Aub.* A stove climber, producing yellow flowers. It is a native of Guiana, and was introduced in 1822.

3146 *399*a* DRACOPHY'LLUM *R. Br.* (*Drakon*, a dragon, *phyllon*, a leaf.) secúndum *R. Br.* Epacridàceæ. A genus of New Holland shrubs with white flowers, and requiring to be grown in sandy peat.

3147 1514*a* DREPANOCA'RPUS *Mey.* (*Drepanon*, sickle, *karpos*, fruit.) lunàtus *Mey.* Leg. Pap. Dalb. No. 10026. in p. 604.

3148 646*c* DREPANOPHY'LLUM *Hofm.* (*Drepanon*, scythe, *phyllon*, leaf; form.) agréste *Hofm.* Umbellàceæ. No. 3600. in p. 216.

3149 *1205*b* DRI'MYS *Forst.* (*Drimys*, acrid; bark acrid and aromatic.) Winter*i* Forst. Magnoliàceæ. Winter*a* aromática *Mur.* A medicinal tree, a native of Magellan. Introduced in 1827.

3150 *606*a* DRUMMO'ND*ia* Dec. (*Mr. Drummond*, botanical collector.) mitellöides *Dec.* Saxifragàceæ. Mitélla pentándra *Hook.* A curious hardy perennial, producing its yellowish flowers in June. It is a native of the Rocky Mountains.

3151 *659*a* DRU'*sa* Dec. (*M. Le Dru*, a botanist.) oppositifólia *Dec.* Umbellàceæ. An uninteresting little white-flowered creeper. Introduced from Teneriffe in 1824.

3152 688*a* DRYMA'RIA *W.* (*Drymos*, a forest; habitation.) cordàta *W.* Caryophyllàceæ. No. 1291. in p. 74.

3153 1373*a* DRYMO'NIA *Mart.* (*Drymonia*, woodland; inhabits forests.) bicolor *Mart.* Gesneràceæ. No. 8923. in p. 534.

3154 *2056*a* DRY'PETES *Vahl.* (*Drypto*, to lacerate; spiny.) cròcea *Poit.* Rhamnàceæ. Schæffèr*ia* lateriflòra *Swz.* A West Indian shrub, introduced in 1820.

3155 *119*c* DULI'CHIUM *Pers.* (Name of the island where found.) spathàceum *Pers.* Cyperàceæ. A curious hardy bog-plant, a native of North America. Introduced in 1818.

3156 *1608*a* *DU'RIO* L. (*Durio*, a thorn, *Malay*; spinous fruit.) zebethinus *L.* Malvàceæ. A stove tree, attaining the height of 60 ft. Introduced from the East Indies in 1825.

3157 594*g* DUVA'L*lia* Haw. (*M. Duval*, a French botanist.) . . . . . Asclepiàceæ. Nos. 3333. to 3337. in p. 202.

3158 1985*h* DUVAU'*a* Kth. [cl. xxi ord. 17.] (*M. Duvau*, a French botanist.) . . . . . Terebinthàceæ. No. 13985. and 13986.

3159 1464*v* *E'BENUS* *L.* (*Abnous*, ebony, *Arabic.*) . . . . . Leg. Pap. Hed. Euh. Nos. 10214. and 10219. p. 614.

3160 1060*c* ECHEVE'RIA Dec. (*Echeveri*, a botanical draughtsman.) . . . . . Crassulàceæ. Nos. 6410. and 6414. in p. 382.

3161 1800*c* ECHINA'CEA *Moen.* (*Echinos*, a hedgehog; receptacle.) . . . . . Comp. Hel. Nos. 12469. and 12470.

3162 *153*a* ECHINOPO'GON *Beauv.* (*Echinos*, prickly, *pogon*, a beard.) ovàtus *Beauv.* Graminàceæ. Agróstis ovàtus *Lab.* A New Holland grass. Introduced in 1820.

3163 892*o* E'CTASIS *D. Don.* (*Ektasis*, extension; stamens prominent.) Plukenèt*ii* D. Don. Ericàceæ. Type, No. 5114. in p. 304.

3164 *904*b* ELA'PHRIUM *Jac.* (*Elaphros*, contemptible; wood.) glàbrum *Jac.* Rutàceæ. *Fagára* Elàphrium *W.* A stove tree, a native of Carthagena. Introduced in 1818.

3165 *2023*a* *ELATE'RIUM* *L.* (*Elater*, an impeller; elastic seed-vessel.) carthaginénse *L.* Cucurbitàceæ. A twining annual, grows to the height of about 5 ft., and produces its yellow flowers in June and July. Introduced in 1823.

3166 *1588*b* ELEIO'TIS *Dec.* (*Eleios*, dormouse, *ous*, ear; leaves.) soròria *Dec.* Leg. Pap. Hed. Euh. *Hed*y*sarum* sorórium *L.* Hállia sorória *W.* *O*nobrýchis sorória *Desf.* An uninteresting tender biennial, with red flowers. Introduced from the East Indies in 1817.

3167 *893*a* ELLIO'*ttia* Mhl. (*Stephen Elliot*, a N. Amer. botan.) racemòsa *Mhl.* Ericàceæ. A half-hardy white-flowering shrub, a native of Georgia, may be increased by layers and grown in a sandy peat soil.

3168 *228*b* ELODE'A *Mx.* (*Elodes*, growing in marshy places.) guianénsis *Mx.* Fluviàceæ. A tender annual aquatic, producing white flowers. Introduced in 1820.

3169 *124*a* ELY'NA *Schr.* (*Elyo*, to cover.) spicàta *Schr.* Cyperàceæ. A small European bog plant. Introduced in 1819.

3170 *435*a* *EMBE'LIA* Brm. (*Æmbilla*, its name in Ceylon.) robústa *Rox.* Myrsinàceæ. An East Indian tree, producing greenish white flowers. Introduced in 1823.

3171 *246*c* EMBO'THRIUM *Forst.* (*En*, in, *bothrion*, a little pit; anthers.) strobilínum *Lab.* Proteàceæ. An ornamental New Holland shrub, producing yellowish green flowers in April. Introduced in 1824.

3172 2027*b* *E'MBLICA* Gae. (Its name in the Moluccas.) officinàlis *Gae.* Euphorbiàceæ. No. 13616., also 13613.

3173 856*a* *E'MEX* Neck. (Probably without meaning.) spinòsus *Camp.* Polygonàceæ. No. 5028. in p. 294.

3174 *1443*b* ENARTHROCA'RPUS *Lab.* (*Ennea*, nine, *arthron*, joint, *karpos*, fruit.) pterocárpus *Dec.* Cruciàceæ. *Ráphanus* pterocárpus *Pers.* An uninteresting yellow-flowered annual, a native of Egypt. Introduced in 1823.

3175 2127*a* *ENTA'DA* Adan. (Its name in Malabar.) monostàchya *Dec.* Leg. Mim. *Mimòsa* *Eutálla* W., also No. 14110. in p. 854.

3176 170*c* ERIA'CHNE *R. Br.* (*Erion*, wool, *achne*, a glume.) obtùsa *R. Br.* Graminàceæ. No. 1044. in p. 58.

3177 *215*a* ERIA'NTHUS *Mx.* (*Erion*, wool, anthos, a flower.) saccharöides *Mx.* Graminàceæ. Sáccharum giganteùm *Pers.* A North American grass, in appearance resembling the sugar-cane. Introduced in 1826.

223 ERIOCAU'LON *L.* (*Erion*, wool, *kaulos*, a stem.) septangulàre *E. B.* Eriocaulònеæ. Nasmýth*ia* articulàta *Huds.*

3178 1492*a* ERIODE'NDRON *Dec.* (*Erion*, wool, *dendron*, tree; wool in pods.) leianthèrum *Dec.*, No. 9942. in p. 592.; anfractuòsum *Dec.*, No. 9943. Bombàceæ.

3179 892*p* ERIODE'SMIA *D. Don.* (*Erion*, wool, *desme*, a little bundle.) capitàta *D. Don.* Ericàceæ. Type, No. 5258. in p. 310.

3180 *20*b* ERI'SMA *Rud.* (*Erisma*, contest; genus long disputed.) floribúndum *Rud.* Vochyàceæ. A blue-flowered stove tree, a native of Guiana. Introduced in 1825.

3181 *984*b* ERYTHROPHLE'UM *Afz.* Red Water Tree. (*Erythros*, red, *phleos*, a water plant.) guineénse *G. Don.* Leg. Mim. Afzèl*ia* grándis *Hort.* A poisonous tree, a native of Sierra Leone. It grows to the height of 100 ft., and produces pale yellow flowers Introduced in 1793.

3182 *1056*a* ERYTHRO'XYLON *L.* (*Erythros*, red, *xylon*, wood.) laurifólium *Lam.* Erythroxýleæ. A genus of timber trees, natives of the Mauritius. They produce greenish yellow flowers, and may be grown in sandy loam.

3183 1337*a* EUCHRO'MA *Nut.* (*Eu*, well, *chroma*, colour ; bracteas.) coccínea *Nut.* Scrophulariàceæ. No. 8748. in p. 524.

3184 *1428*b* EUNO'MIA *Dec.* (*Eu*, well, *nome*, fodder ; used for fodder.) oppositifòlia *Dec.* Cruciàceæ. *Lepídium* oppositifòlium *Lab.*, *Ibèris* oppositifòlia *Pers.*, *Thláspi* oppositifòlia *Potr.*, Lèpia oppositifòlia *Desv.* A half-hardy herbaceous plant, producing its white flowers in June and July. Introduced from Syria in 1827.

3185 882*b* EUPHO'RIA *Com.* (*Euphoros*, fertile ; fruit.) . . . . . Sapindàceæ. Nos. 5101. and 5102. p. 302.

3186 *1161*a* EUPOMA'TIA *R. Br.* (*Eu*, well, *pomazo*, to close with a lid ; flower bud.) *laúrina R. Br.* Anonàceæ. A New Holland shrub, growing to the height of about 4 ft., and thriving in a mixture of sand, loam, and peat. Introduced in 1824.

3187 1739*a* EURY'BIA *Cass.* (*Eurybies*, wide-spreading ; its creeping offsets.) corymbòsa *Cass.* Comp. No. 12062. in p. 710.

3188 892*e* EURY'LEPIS *D. Don.* (*Eurys*, broad, *lepis*, a scale ; calyx scales dilated.) *Halicácaba D. Don.* Ericàceæ. Type, No. 5190. in p. 308.

3189 892*k* EURYLO'MA *D. Don.* (*Eurys*, broad, *loma*, margin ; limb of corolla dilated.) *Aitoni* D. Don. Ericàceæ. Type, No. 5219. in p. 308.

3190 892*f* EURYSTE'GIA *D. Don.* (*Eurys*, broad, *stege*, a cover ; calyx large.) glaúca *D. Don.* Ericàceæ. Type, No. 5269. in p. 310.

3191 *579*a* EUSTE'GIA *R. Br.* (*Eu*, good, *stege*, a covering.) hastàta *B. Br.* Asclepiàceæ. *Apócynum* hastàtum *Thun.* A white-flowered trailer, a native of the Cape, whence it was introduced in 1816.

3192 2130*b* EU'STACHYS *Desv.* (*Eu*, well, *stachys*, a spike ; large.) petræ'a *Desv.* Graminàceæ. No. 14214. in p. 860.

3193 1985*c* EUTE'RPE *Gac.* (*Euterpes*, pleasing ; habit of trees.) caribæ'a *Spr.* Palmàceæ. No. 13496. in p. 800.

3194 1705*b* EUTHA'MIA *Nut.* (*Eu*, well, *thames*, crowded ; flowers.) graminifòlia *Nut.* Comp. Vern. No. 12092., also 12093.

3195 *301*e* EVO'DIA *Forst.* (*Euodia*, a sweet smell.) triphýlla *Dec.* Rutàceæ. *Fagàra* triphýlla *Lam.* An East Indian shrub, producing white flowers. Introduced in 1821.

3196 994*a* FABA'GO *Led.* (*Faba*, a bean ; lvs. resemble those of the bean.) màjor *D. Don.* Zygophyllàceæ. No. 5872. in p. 352.

3197 1553*b* *FAGE'LIA* Neck. (Not explained.) bituminòsa *Neck.* Leg. Pap. Phas. No. 10306. in p. 618.

3198 *437*a* FAGRÆ'*a* Thun. (*J. T. Fagræus*, M.D., a friend of Thunberg.) zelánica *Thun.* Apocynàceæ. Willughbe*ia* zelánica *Spr.* A white-flowered evergreen tree. Introduced in 1816. It requires to be grown in a mixture of sandy peat and loam.

3199 *292*a* FERNE'*lia* J. (*J. Fernel*, physician to Henry II. of France, died in 1558.) obovàta *Lam.* Rubiàceæ. A genus of evergreen shrubs, natives of the Isle of France, of which two species were introduced in 1816.

3200 668*a* FERULA'GO *Koch.* (*Ferio*, to strike ; used as rods.) nodiflòra *Koch.* Umbellàceæ. No. 3701. in p. 220.

3201 1838 FILA'GO *L.* (*Filum*, a thread ; covered with.) germánica *L.*, *Gífola* vulgàris *Cass.* ; gállica *L.*, *Lógfia* subulàta *Cass.* Comp. Vern.

3202 *989*b* FLINDE'RS*ia* R. Br. (*Capt. M. Flinders*, a celeb. voyager.) australis *R. Br.* Meliàceæ. A New Holland timber tree, attaining the height of 60 ft. Introduced in 1823.

3203 *1126*b* FŒTI'DIA *Com.* (*Fœtidus*, fetid ; odour of wood.) mauritiàna *Lam.* . . . . A stove tree, growing to the height of 25 ft., and producing white flowers. Introduced in 1825.

3204 *1082*c* FRIE'*sia* Dec. (*Elias Fries*, of the Univ. of Lund.) pedunculàris *Dec.* Elæocarpàceæ. Elæocárpus pedunculàtus *Lab.* A green-house shrub, a native of Van Diemen's Land. Introduced in 1818. It produces white flowers, and thrives in a mixture of peat and loam.

3205 *1175*c* FREZIE'*ra* Swz. (*A. F. Frezier*, a traveller in Peru and Chile.) *theæ*ôides *Swz.* Ternstrœmiàceæ. A shrub, a native of Jamaica, whence it was introduced in 1818. It may be increased by cuttings, and thrives in sandy loam.

3206 *1662*a* FROLO'*via* Led. (*Frolow*, a Russian botanist.) lyràta *Led.* Comp. Cynar. Saussùre*a* Frolò*vii* Led. A sulphur-coloured-flowered perennial, a native of Altaia. Introduced in 1834.

3207 *134*a* FUIRE'*na* Rtb. (*G. Fuiren*, a Danish bot.) umbellàta *Rtb.* Cyperàceæ. A curious perennial bog plant, a native of the West Indjes. Introduced in 1825.

3208 *984*c* *GAGNEBI'NA* Neck. (Of no meaning.) axillàris *Dec.* Leg. Mim. Mimòsa pterocárpa *Lam.* An evergreen shrub, a native of the Mauritius, whence it was introduced in 1824.

3209 1739*e* *GALATE'LLA* Cass. (Meaning not given.) punctàta *Nees.* Comp. Vern. No. 12008. in p. 708.

3210 71*f* GANYME'DES Haw. (A son of Tros, and cup-bearer to Jupiter.) . . . Amaryllàceæ. Nos. 4025. 4021. and 4023.

3211 769*e* GASTE'RIA *Haw.* (*Gaster*, a belly ; base of flowers.) . . . Hemerocallídeæ. Nos. 4427. to 4439. in p. 262.

3212 *8*a* GASTROCHI'LUS *Wall.* (*Gaster*, a belly, *cheilos*, lip ; bellied lip.) pulchérrimus *Wall.* Scitamíneæ. An ornamental stove perennial, producing yellow and pink flowers in August. Introduced from Rangoon in 1828.

3213 786*a* GASTRONE'MA *Herb.* (*Gaster*, a belly, *nema*, a filament.) clavàtum *Herb.* Amaryllàceæ. No. 4209. in p. 250.

3214 *571*a* GAUDICHAU'*dia* H. & B. (*C. Gaudichaud*, accomp. Freycinet.) cynanchòides *H. & B.* Malpighiàceæ. An ornamental stove twiner, growing to the height of about 10 ft. Introduced from Mexico in 1824.

3215 *2080*a* GEO'NOMA *W.* (*Geonomos*, skilled in agriculture ; propagation.) pinnátifrons *W.* Palmàceæ. An ornamental palm, growing to the height of 15 ft. Introduced from Caraccas in 1821.

3216 497*a* GEO'PHILA *D. Don.* (*Ge*, the earth, *phileo*, to love.) reniformis *D. Don.* Rubiàceæ. No. 2814. in p. 172.

3217 *1460*a* GILLIE'*sia* Lindl. (*Dr. Gillies*, of Conception, in Chile.) gramínea *Lindl.* Gilliesiàceæ. A curious half-hardy bulbous-rooted plant, producing its green flowers in August and September. Introduced from Chile in 1825.

3218 699*b* GLOBU'LEA *Haw.* (*Globulus*, a globule ; stems.) . . Crassulàceæ. Nos. 3874. 3876. 3880. 3885. 3890. in p. 230.

3219 *1581*b* GLOTTI'DIUM *Desv.* (*Glottis*, superior opening of larynx ; legume.) floridànum *Desv.* Leg. Pap. Lot. Gal. *Sesbània* dispérma *Ph.*, *Sesbánia* vesicària *Spr.*, *S.* platycárpa *Pers.*, *Phàca* floridàna *W.*, *Æschynómene* platycárpa *Mx.* A tender annual, producing its yellow flowers in July and August. A native of Florida, whence it was introduced in 1816.

3220 *2040*a* *GNE'TUM* L. (From *gnemon*, its name in the Island of Ternate.) *Gnèmon* L. Urticàceæ. An East Indian tree, introduced in 1815. It may be increased by cuttings, and the plants thrive in a mixture of peat and loam.

3221 *1431*b* GOLDBA'CHIA Dec. (*C. L. Goldbach*, of Petersburg, botanist.) lævigàta *Dec.* Cruciàceæ. *Ráphanus* lævigàtus *Bieb.* An ornamental annual, producing its pale blue flowers from May to July. A native of Astracan. Introduced in 1827.

3222 *2007*b* *GOMU'TUS* Rum. (Its name in Malabar ?) sacchárifer *Spr.* Palmàceæ. A palm, growing to the height of 40 ft. Introduced from the Moluccas in 1820.

3223 *321*a* GONOCA'RPUS *Thun.* (*Gonia*, an angle, *karpos*, fruit ; seeds.) micránthus *Thun.* Salicàceæ. A curious white-flowered annual. A native of China. Introduced in 1806.

3224 594*b* GONOSTE'MON *Haw.* (*Gonia*, an angle, *stemon*, a stamen.) . . . Asclepiàceæ. No. 3307. in p. 200.

3225 *91*a* GOUFFE'*ia* Robil. (*Gouffé de la Cour*, a botanist of Marseilles.) holosteòides *G. & M.* Caryophyllàceæ. A simple white-flowered annual. Introduced from Russia in 1836.

3226 †1608 *GUAZU'MA* Plu. (Its name in Mexico.) ulmifòlia *Lam.* Byttneriàceæ. No. 10935. in p. 650.

3227 *1594*a* GULDENSTÆ'DT*ia* Fis. (*J. A. Guldenstaedt*, naturalist.) pauciflòra *Fis.* Leg. Pap. Lot. Astr. *Actrágalus* pauciflòrus *Pall.*

3228 *252*b* GYMNO'STACHYS *R. Br.* (*Gymnos*, naked, *stachys*, spike.) ánceps *R. Br.* Aràceæ. An ornamental New Holland plant. Introduced in 1820. It requires to be grown in a mixture of peat and loam, and may be increased by suckers.

3229 1448*b* GYNANDRO'PSIS *Dec.* (*Gynandros*, hermaphrodite, *opsis*, appearance.) pentaphýlla *Dec.* Capparàceæ. No. 8326. in p. 558.

3230 892*a* GYPSOCA'LLIS *Sal.* (*Gypsos*, lime, *kallistos*, most beautiful.) vàgans *Sal.* Ericàceæ. Type, No. 5370. in p. 314.

3231 *2146*a* GYROCA'RPUS *Jac.* (*Gyro*, to turn round, *karpos*, fruit; in air.) americànus *Jac.* Laur. affines. Jacquini Gae. A West Indian tree. Introduced in 1816.

3232 *1241*a* GYROSTE'MON *Desf.* (*Gyros*, circle, *stemon*, stamen; concentric arrangement.) attenuàtus *Hook.* Tiliàceæ. Codonocárpus austrâlis *Cun.* A curious green-house tree, growing to the height of 25 ft. Introduced from Moreton Bay in 1830.

3233 *558*a* HABLI'TZ*ia* Bieb. (*M. C. von Hablitz*, auth. of Travels in Crimea.) tamnöld s *Bieb.* Chenopodiàceæ. A deciduous perennial climber, producing its white flowers from July to October. A native of Caucasus. Introduced in 1828.

3234 414*a* HÆMADI'CTYON *Lindl.* (*Haima*, blood, *diktyon*, a net; leaves.) venòsum *Lindl.* Apocynàceæ. No. 2364. in p. 146.

3235 1569*a* HALIMODE'NDRON *Fis.* Salt Tree. (*Halimos*, maritime, *dendron*, tree.) argénteum *Fis.* Leg. Pap. Lot. Gal. No. 10473.

3236 1635*a* HAPALOSTE'PHIUM *D. Don.* (*Hapalos*, soft, *stephos*, crown; hairy receptacle.) . . . . Comp. Cich. Nos. 11213, 11214, 11215. 11250. and 11253.

3237 1553*a* HARDENBE'RG*ia* Benth. (*Frances Countess Hardenberg*, sister of Baron Hügel.) monophýlla *Benth.* Leg. Pap. Phas. No. 10319. in p. 618.

3238 *986*b* HARDWI'CK*ia* Rox. (*Major-Gen. Hardwick*, E. I. C. Artillery.) binàta *Rox.* Leg. Cæs. Cass. A genus of East Indian trees, which grow to the height of about 40 ft., and produce yellow flowers.

3239 *1617*a* *HARO'NGA* Thou. (Its name in Madagascar.) madagascariénsis *Choi.* Hypericàceæ. H. paniculàta *Lo. C.* A yellow-flowered stove shrub. Introduced in 1825.

3240 1630*a* HARPA'LYCE D. Don (*Harpalyce*, daughter of Lycurgus.) álba *D. Don.* Comp. Cich. No. 11146., also 11147, and 11148.

3241 769*f* HAWO'RTH*ia* Duval. (*A. H. Haworth*, F.L.S., a distinguished botanist.) Hemerocallídeæ. Nos. 4385. to 4387. 4389. to 4404. 4413, 4414. 4416. 4418. to 4426. and 4440.

3242 1739*e* HAXTO'N*ia* Caley. (*John Haxton*, gardener attached to Macartney's embassy to China.) argophýlla *Caley.* Comp. Vern. No. 11961., also 11957. in p. 706.

3243 *889*b* HEDWI'G*ia* Swz. (*John Hedwig*, a cryptogamist, died 1799.) balsamífera *Swz* Terebinthàceæ. A West Indian tree, growing to the height of 40 ft. Introduced in 1820. It may be increased by cuttings, and grown in a mixture of loam and peat.

3244 295*a* HEDYO'TIS *W.* Indian Madder. (*Hedys*, sweet, *ous*, an ear; leaves like ears.) . . . . Rubiàceæ. Nos. 1760. and 1761.

3245 *1002*c* HEISTE'R*ia* L. Bois Perdrix. (*Lawrence Heister*, prof. bot. Halstadt, died 1758.) coccínea *Jac.* Olacàceæ. An ornamental West Indian tree, producing scarlet flowers. Introduced in 1822.

3246 711*p* HELE'N*a* Haw. (The daughter of Leda and Jupiter, most beautiful woman of her time.) . . . Amaryllàceæ. Nos. 4018. and 4002.

3247 646*a* HELOSCIA'DIUM *Koch.* (*Helos*, marsh, *skiadion*, umbel.) nodiflòrum *Koch.* Umbellàceæ. No. 3596., also 3597. and 3604.

3248 *248*a* HEMICLI'DIA *R. Br.* (*Hemisus*, half, *kleio*, to shut up?) Báxteri R. Br. Proteàceæ. Dryándra falcàta *R. Br.* A green-house shrub, producing its yellow flowers in June. A native of Lucky Bay.

3249 *42*a* HEMI'MERIS *L.* (*Hemi*, half, *meris*, a part; a half flower.) montàna *L.* Scrophulariàceæ. An ornamental herbaceous green-house plant, a native of the Cape. Introduced in 1816.

3250 1674*b* HERACA'NTHA *Lk.* (*Heros*, noble, *akantha*, thorn; flws.) . . . . . Comp. Card. Nos. 11480, and 11481. p. 686.

3251 711*o* HERMI'ON*e* Haw. (The daughter of Menelaus and Helena.) . . . . . Amaryllàceæ. Nos. 4015. 4014. 4016. 4013. 4004. 4003. 4008. 4007. 4006. 4005. 4012. 4011. and 4020.

3252 799*a* HESPEROSCO'RDUM *Lindl.* (*Hesperos*, evening, *skordon*, garlic; smell.) *hyacínthinum* Lindl. Asphodèleæ. No. 4609. in p. 272.

3253 *109*a* HETERANTHE'RA *Beauv.* (*Heteros*, variable, *aner*, anther.) . . Pontederàceæ. No. 736. in p. 44.

3254 2129*a* HETEROPO'GON *Beauv.* (*Heteros*, variable, *pogon*, beard; awns.) contórtus *Beauv.* Graminàceæ. No. 14209. in p. 860.

3255 1055*c* HETERO'PTERIS *H. & B.* (*Heteros*, various, *pteron*, wing; capsule.) . . . Malpighiàceæ. Nos. 6388, 6389. 6391. and 6395.

3256 *1072*a* HETERO'TROPA *Morr.* (*Heteros*, variable, *trope*, change; plant variable.) asaroïdes *Morr.* Asaràceæ. A curious green-house perennial, producing its purple flowers in April and May. Introduced from Japan in 1836.

3257 *1464*c* HEYLA'ND*ia* Dec. (*M. Heyland*, artist employed by Decandolle.) hebecárpa *Dec.* Leg. Pap. Lot. Gen. Hállia monophýlla *Desv.*

3258 *153*b* HIERO'CHLOE *Gm.* (*Hieros*, holy, *chloe*, grass.) boreàlis *R. & S.* Graminàceæ. No. 14229. in p. 860. *Hólcus* boreàlis *Schr.*, *H.* odorâtus *L.* It was discovered by the late Mr. G. Don, in a narrow mountain valley called Kella, in Angusshire.

3259 367*b* HI'PPION *Spr.* (*Hippos*, a horse, *ion*, a violet.) viscòsum *Spr.* Gentianàceæ. No. 1726. in p. 98.

3260 *417*a* HOLARRHE'NA *R. Br.* (*Holos*, entire, *arrhen*, a male; anthers.) villòsa *Ait.* Apocynàceæ. An East Indian shrub. Introduced in 1820.

3261 *2164*c* *HOLIGA'RNA* Rox. (Its name in Karnata.) longifòlia *Rox.* Terebinthàceæ. An East Indian tree, growing to the height of 60 ft. Introduced in 1828.

3262 *1203*a* HOMA'LIUM *Jac.* (*Homalos*, equal; stamens.) racemòsum *Jac.* Homalinàceæ. A West Indian shrub, producing its white flowers from May to July. Introduced in 1816.

210 *Ho'RDEUM L.* (According to Bodæus à Stapel, *hordus*, heavy.) dístichon *L.* Graminàceæ. Zeócriton dístichum *C. Bauh.*

3263 *1034*c* HORKE'L*ia* Cham. (*John Horkel*, prof. of Physiol. at Berlin.) congésta *Dou.* Rosàceæ. A curious white-flowered hardy perennial, a native of North America, whence it was introduced in 1826.

3264 *228*c* HOUTTUY'N*ia* Thun. (*Dr. Houttuyn*, a virtuoso of Amsterdam.) cordàta *Thun.* Aràceæ. A curious little herbaceous stove plant, producing yellowish green flowers. A native of Japan, and was introduced in 1820.

3265 *1463*b* HUGO'N*ia* L. (*Dr. A. J. Hugo*, a friend of Haller's) mýstax *L.* Chlenàceis affines. A stove shrub, a native of Ceylon, producing its yellow flowers in June and July. Introduced in 1818.

3266 199*a* HYDRO'CHLOA *Hor.* (*Hydor*, water, *chloa*, grass.) . . . . . Graminàceæ. Nos. 1173. 1195. and 1201.

3267 1304*a* HYGRO'PHILA *R. Br.* (*Hygros*, moist, *phileo*, to love; habitat.) ringens *R. Br.* Acanthàceæ. No. 8606. in p. 518.

3268 *458*a* HYMENODI'CTYON *Wall.* (*Hymen*, a membrane, *dictyon*, a net.) thyrsiflòrum *Wall.* Rubiàceæ. Cinchòna thyrsiflòra *Rox.* An East Indian tree, introduced in 1819. It produces yellowish green flowers, and thrives on a mixture of loam and peat.

3269 * HYMENOPY'RAMIS *Wall.* (*Hymen*, membrane, *pyramis*, pyramid.) brachiàta *Wall.* Verbenàceæ. An East Indian shrub, introduced in 1832.

3270 *2078*a* HYPHÆ'NE *Gae.* (*Hyphaino*, to entwine; fibres of fruit.) coriàcea *Gae.* Palmàceæ. Cucífera thebàica *Del.* A palm, growing to the height of 20 ft. A native of Egypt. Introduced in 1824.

3271 1464*d* HYPOCALY'PTUS *Thun.* (*Hypo*, under, *kalypto*, to veil.) obcordàtus *Thun.* Leg. Pap. Lot. Gen. No. 10110. in p. 608.

3272 *128*a* HYPOE'LYTRUM *Rich.* (*Hypo*, under, *elytron*, covering; bract under glume.) argénteum *Vahl.* Cyperàceæ. A native of the East Indies, whence it was introduced in 1824.

3273 *2046*a* HYPOLÆ'NA *R. Br.* (*Hypo*, under, *chlaina*, cloak; base of fruit.) fastigiàta *R. Br.* Restiàceæ.

3274 *1346 HYPO'LYTRUM *Vahl.* (*Hypo*, under, *elytron*, involucrum.) senegalénse *Rich.* Cyperàceæ. A bog plant introduced from Senegal in 1824

3275 *1010*b* *I'CICA* Aub. (Its name in Guiana.) heterophýlla *Dec.* Terebinthàceæ. *Amyris* heterophýlla *W.* A genus of stove trees, bearing white flowers. A mixture of loam and peat suits them.

3276 711*e* I'LLUS Haw. (Son of Tros and Callirrhoe; from whom Troy had its name Ilium.) . . . . . Amaryllàceæ. No. 4026. in p. 240.

1744 *I'NULA L.* (Corrupted from *Helenium.*) crithmifòlia *L.* Comp. Card. Vern. Limbárda tricúspis *Cass.*

3277 *148*a* ISA'CHNE *R. Br.* (*Isos*, equal, *achne*, a glume.) australis *R. Br.* Graminàceæ. A New Holland bog plant. Introduced in 1820.

3278 1246*a* ISA'NTHUS *Mx.* (*Isos*, equal, *anthos*, flower; regular corolla.) cærùleus *Mx.* Labiàceæ. No. 8485. in p. 512.

3279 833*b* ISE'RTIA Schreb. (*P. E. Isert*, a Danish surgeon on coast of Guinea.) coccínea *Vahl.* Rubiàceæ. No. 13315. in p. 788.

3280 *1770*a* *ISME'LIA* Cass. (Meaning unknown.) maderénsis *D. Don.* Com. Anth. A half-hardy shrub introduced in 1834.

122 ISO'LEPIS *R. Br.* (*Isos*, equal, *lepis*, a scale; flower of equal scales.) fluitans *R. Br.* Cyperàceæ. Heleogeiton fluitans *Lindl.*

3281 *447*a* *JABORO'SA* J. (*Jaborose*, Arabic name for mandrake; affinity.) runcinàta *Lam.* Solanàceæ. A pretty herbaceous green-house plant. Introduced from Plata in 1831.

3282 1119*a* *JAMBO'SA* Rum. (*Jambos*, aboriginal name.) vulgàris *Dec.* Myrtàceæ. No. 6959. also 6958. and 6951.

3283 2033*a* *JANI'PHA* Kth. (*Janipaba*, its name in Brazil.) *Manihot* Kth. Euphorbiàceæ. No. 13649. in p. 814.

3284 *83*c* JO'HNIA Rox. (*Rev. Dr. John*, of Tranquebar.) salaciöides *Rox.* Hippocrateæ. A stove shrub with yellowish-green flowers, a native of the East Indies. Introduced in 1822.

3285 711*m* *JONQUI'LLA* Haw. (*Jonquille*, Fr., dim. of *juncus*, Lat., a rush.) . . . . . Amaryllàceæ. No. 4017. in p. 240.

3286 *1118*a* *JOSSI'NIA* Com. (Not known.) orbiculàta *Dec.* Myrtàceæ.

3287 †927 *KALANCHO'E* Adan. (Chinese name.) . . . . . Sempervíveæ. Nos. 5629, 5630, and 5631.

3289 698*a* KALOSA'NTHES *Haw.* (*Kalos*, beautiful, *anthos*, a flower.) . . . . . Crassulàceæ. Nos. 3865. to 3870, and 3884. p. 230.

3289 1674*a* KENTROPHY'LLUM *Neck.* (*Kentron*, spine, *phyllon*, leaf.) arboréscens *Hook.* Comp. Card. No. 11485. in p. 686.

3290 *2034*c* *KIRGANE'LIA* J. (*Kirganeli*, its Malabar name.) élegans *J.* Euphorbiàceæ. *Phyllánthus Kirganèlia* W. An ornamental stove shrub. Introduced from the Mauritius in 1820.

142 KNA'PPIA E. B. (*Mr. M. Knapp*, who wrote on British grasses.) agrostídea *E. B.* Gramíneæ. Chamægróstis mínima *Schr.*, *Mibóra* vérna *Beauv.*, Stúrmia mínima *Hoppe.*

3291 *270*b* KNO'XIA L. (*Robert Knox*, an English traveller in 1681.) zeylánica *L.* Rubiàceæ.

3292 1401*b* KONI'GA R. Br. (*Charles Konig*, F.R.S., British Museum.) maritima *R. Br.* Cruciàceæ. No. 9069. Adysètum maritimum *Lk.*

3293 *1685*a* KU'HNIA L. (*Adam Kühn*, of Pennsylvania, pupil of Linnæus.) Critònia W. Comp. Eup. Critònia Kühnia Gae. A genus of somewhat ornamental white-flowered perennials, natives of South America.

3294 *1985*i* KU'NTHIA Hum. (*C. S. Kunth*, an acute French botanist.) montàna *Hum.* Palmàceæ. An ornamental palm growing to the height of about 10 ft. Introduced from New Grenada in 1829.

3295 * LABICHÆ'A Benth. (*M. Labiche*, a French naval officer.) lanceolàta *Benth.* Labiàceæ. A green-house shrub, a native of the Swan River. Introduced in 1837.

3296 1548*b* *LA'BLAB* Adan. (*Lablab*, the Arabic name of the convolvulus.) vulgàris *Savi.* Leg. Pap. Phas. No. 10270., also No. 10285. p. 606. genus *Lablàvia* D. Don.

3297 113*a* LACHNA'NTHES *Ell.* (*Lachne*, wool, *anthos*, a flower.) . . . . . Hæmodoràceæ. No. 751. in p. 44.

3298 *1179*b* LÆ'TIA L. (*J. de Laet*, of Antwerp, author of a History of America.) Thámnia *Swz.* Bixàceæ. A West Indian shrub, introduced in 1834. It produces its white flowers from June to August.

3299 2019*a* LAGENA'RIA *Spr.* Bottle Gourd. (*Lagena*, a bottle; form of fruit.) vulgàris *Ser.* Cucurbitàceæ. No. 13561.

3300 *984*a* LAGONY'CHIUM *Bieb.* (*Lagos*, a hare, *onychion*, a little nail.) Stephaniànum Bieb. Leg. Mim. Mimòsa micrántha *Vahl.* A half-hardy deciduous shrub, producing its yellow flowers in July and August.

3301 566*a* LAHA'YA R. & S. (*M. Lahaye*, a botanical gardener.) . . . . Paronychièæ. Nos. 3181. and 3182. in p. 194.

3302 892*h* *LA'MPROTIS* *D. Don.* (*Lamprotes*, splendour; calyx glistening.) calycina *D. Don.* Ericàceæ. Type, No. 5237. in p. 308.

3303 *996*a* LA'RREA Cav. (*J. A. H. de Larrea*, a Spanish bot.) nítida *Cav.* Zygophyllàceæ. An ornamental undershrub, a native of South America, whence it was introduced in 1823. It produces its yellow flowers in June and July.

3304 1714*a* LASIOSPE'RMUM *Lag.* (*Lasios*, woolly, *sperma*, seed.) pedunculàre *Lag.* Comp. Anthem. No. 11656., also 11657. and 11658.

3305 *539*a* LAVRA'DIA *Dec.* (*Vandelli*, *Marquis of Lavradio.*) montàna *Mart.* Violàceæ. A pretty Brazilian under-shrub, producing purple flowers. Introduced in 1826.

3306 *1195*a* LE'CYTHIS *L.* (*Lekythos*, an oil jar; seed-vessel.) grandiflòra *Aub.* Lecythàceæ. A genus of stove trees and shrubs, which produce whitish yellow flowers, may be increased by cutting sand grown in sandy loam.

3307 2128*a* LEIMA'NTHIUM *Mx.* (*Leimon*, meadow, *anthos*, flower.) virgínicum *W.* Melanthàceæ. No. 14205. in p. 860.

3308 *1985*a* LEOPOLDI'NA Mart. (The late Empress of Brazil.) púlchra *Mart.* Palmàceæ. A palm, attaining the height of 60 ft. A native of Brazil. Introduced in 1825.

3309 1256*b* LEPECHI'NIA W. (*John Lepechin*, a Russian botanist.) spicàta *W.* Labiàceæ. No. 8265.

3310 *1301*b* LEPIDA'GATHIS *W.* (*Lepis*, a scale, *agathis*, a ball.) cristàta *W.* Acanthàceæ. An East Indian perennial, introduced in 1820, and thrives in sandy loam.

3311 *119*b* LEPIDOSPE'RMA *Lab.* (*Lepis*, a scale, *sperma*, a seed.) gladiàta *R. Br.* Cyperàceæ. A curious green-house perennial bog plant. Introduced from New Holland in 1819.

3312 *1424*a* LEPTA'LEUM *Dec.* (*Leptaleos*, slender; leaves.) filifòlium *Dec.* Cruciàceæ. *Sisymbrium* filifòlium *W.* A curious little yellow-flowered annual. Introduced from Siberia in 1820.

3313 39*a* LEPTA'NDRA *Nut.* (*Leptos*, slender, *aner*, anther.) . . Scrophulariàceæ. Nos. 182. and 183. in p. 14.

3314 *2047*a* LEPTOCA'RPUS *R. Br.* (*Leptos*, slender, *karpos*, fruit.) tènax *R. Br.* Restiàceæ. Schœnòdum tènax *Lab.*

3315 *569*b* LEPTOME'RIA *R. Br.* (*Leptos*, slender, *meris*, a part; habit.) Billardièri R. Br. Santalàceæ. Thèsium drupàceum *Lab.* A genus of curious little white-flowered New Holland shrubs, two species of which were introduced in 1823.

3316 *2046*b* LEPYRO'DIA *R. Br.* (*Lepyrodes*, scaly; bracteas within scales of spikes.) grácilis *R. Br.* Restiàceæ.

3317 1738*a* LE'RIA Dec. (*Leri*, a friend of Decandolle's.) nùtans *Dec.* Comp. Labiat. No. 11882. in p. 704.

3318 *1175*d* LETTSO'MIA R. & P. (*J. Cockley Lettsom*, an English naturalist.) tomentòsa *R. & P.* Ternstrœmiàceæ.

A shrub growing to the height of about 4 ft. Introduced from Peru in 1823. and thrives in sandy loam.

3319 114*b* LEUCOCO'RYNE *Lindl.* (*Leukos*, white, *koryne*, club; sterile anthers.) ixiöides *Lindl.* Asphodelàceæ. No. 752. in p. 44.

3320 1730*a* LEUCOSTE'MMA *D. Don.* (*Leukos*, white, *stemma*, a crown; flowers.) vestitum *D. Don.* Comp. Vern. No. 11795. in p. 700.

3321 1016*c* LEUCOTHÖE D. Don. (*Leucothöe*, a beautiful nymph beloved by Apollo.) . . . . Ericàceæ. Nos. 5948. 5954, 5955. 5957, and 5958.

3322 665*b* LEVI'STICUM *Koch.* (*Levo*, to assuage; relieves flatulency.) officinàle *Koch.* Umbellàceæ. No. 3683. in p. 220.

3323 *1173*a* LEWI'*sia* Ph. (*Capt. M. Lewis*, who accompanied Clarke to Rocky Mountains.) rediviva *Ph.* Crassulàceæ. A fusiform-rooted white-flowered perennial, a native of North America. Introduced in 1826.

3324 *604*a* *LINCO'NIA* L. (Probably a man's name.) thymifòlia *Swz.* Bruniàceæ. Diósma denùsta *Thun.* A genus of white-flowered Cape shrubs, which may be increased by cuttings, and grown in a mixture of peat and loam.

3325 725*a* LITTÆ'*a* Brig. (*Duke of Lytta*, near Milan.) geminiflòra *Brig.* Bromeliàceæ. No. 4102. in p. 244. Bonapàrtea juncea *Haw. & Hort.*

3326 *2108*a* LODOI'CEA Com. (*Laodice*, the daughter of Priam and Hecuba.) sechellàrum *Lab.* Palmàceæ. *Cocos* maldivica *Gm.* An ornamental palm, attaining the height of 80 ft. A native of Sechelles.

3327 1717*a* *LO'NAS* Adan. (Probably without meaning.) inodòra *Gae.* Comp. Anthem. No. 11663. in p. 696.

3328 1512*a* LONCHOCA'RPUS *H. & B.* (*Logche*, lance, *karpos*, fruit.) latifòlius *H. & B.* Leg. Pap. Lot. Gal. No. 10033. in p. 604.

3329 892*g* LOPHA'NDRA *D. Don.* (*Lophos*, crest, *aner andros*, a man or stamen.) pyramidàlis *D. Don.* Ericàceæ. Type, No. 5376. in p. 314.

3330 1130*a* LOPHI'RA *Banks.* African Scrubby Oak. (*Lophos*, a crest; bract. of flower.) africàna *Banks.* Lophíreæ.

3331 *1482*a* LOPI'MIA *Mart.* (*Lopimos*, easy of decortication.) malacophýlla *Mart.* Malvàceæ. Sida malacophýlla *Lk.* An evergreen stove shrub, producing its red flowers from July to September. A native of Bahia. Introduced in 1823.

3332 1580*a* *LOU'REA* Neck. (Not explained.) vespertilionis *Desv.* Leg. Pap. Hed. Euh. No. 10559. in p. 630.

3333 1148*a* LO'WEA Lindl. (*Rev. Mr. Lowe*, travelling bachelor of the University of Cambridge.) *berberifolia Lindl.* Rosàceæ. No. 7463. in p. 442.

3334 427*a* *LUCU'MA* J. (Its Peruvian name.) mammòsa *J.* Sapotàceæ. No. 2409. in p. 150.

3335 *1619*c* LU'HEA W. (*Charles Vander Luhe*, a German botanist.) paniculàta *Mart.* Tiliàceæ. A stove climber producing rose-coloured flowers. A native of Brazil. Introduced in 1828.

3336 *450*a* LYCIOSERI'SSA *R. & S.* (*Lycium* and *serissa*; serissa-like lycium.) capénsis *R. & S.* Solanàceæ. An uninteresting Cape shrub, producing green flowers. Introduced in 1820.

3337 450*b* LYCOPE'RSICUM *Tou.* (*Lykos*, wolf, *persikon*, peach; aphrodisiac.) esculéntum *Dun.* Solanàceæ. No. 2517., also 2516. 2518, 2519, 2520. p. 156.

3338 1016*d* LYO'*nia* Nut. (*J. Lyon*, an American collector of plants.) . . . . . Ericàceæ. Nos. 5939, 5940, 5941. 5946, 5947. 5951, 5952, 5953. and 5956.

3339 *415*a* LYO'*nsia* R. Br. (*J. Lyons*, a English botanist.) stramínea *R. Br.* Apocynàceæ. Has straw-coloured flowers. A native of New Holland. Introduced in 1820.

3340 1073*a* MACLEA'*ya* R. Br. (*A. MacLeay*, secretary to Lin. Soc.) cordàta *R. Br.* Papaveràceæ. No. 6583. in p. 392.

3341 *519*a* MACRO'STYLIS *B. & W.* (*Makros*, long, *stylis*, a style.) barbàta *Hil.* Rutàceæ. Agathósma barbàta *Spr.*

3342 943*a* MACRO'TROPIS *Dec.* (*Makros*, long, *tropis*, a keel; flower.) fœ'tida *Dec.* Leg. Pap. Soph. No. 5678. in p. 342.

3343 *1164*a* MACRO'TYS *Rafi.* (*Makros*, long, *ous*, ear; capsule.) racemòsa *Rafi.* Ranunculàceæ. *Actæ'a* racemòsa *L.* A North American deciduous perennial, and produces its white flowers from April to June.

3344 442*a* *MÆ'SA* J. (*Maas*, its Arabian name.) indica *Wall.* Myrsinàceæ. No. 2457. in p. 154.

3345 1495*a* MALACHODE'NDRON *Cav.* (*Malachos*, soft, *dendron*, tree.) ovàtum *Cav.* Ternstrœmiàceæ. No. 9950. in p. 592.

3346 †1479 MALVAVI'SCUS *Dil.* (*Malva*, mallow, *viscus*, glue.) arbòreus *Cav.* Malvàceæ. No. 9804. also Nos. 9805. and 9806.

3347 *2007*c* MANICA'RIA *Gae.* Wine Palm. (*Manica*, a glove; spathe.) saccífera *Gae.* Palmàceæ. Attains the height of 30 ft. A native of the East Indies. Introduced in 1823.

3348 *212*c* MANISU'RUS *L.* (*Manis*, scaly lizard, *oura*, tail; spikes.) granulàris *Swz.* Graminàceæ. A curious East Indian perennial grass. Introduced in 1821.

3349 *68*a* MARGYRICA'RPUS *R. & P.* (*Margaron*, pearl, *karpos*, fruit; resemblance.) setòsus *R. & P.* Rosàceæ. A curious green-flowered stove shrub. Introduced from Peru in 1829.

3350 *908*a* *MA'RLEA* ROX. (*Marliya*, its Bengal name.) begoniæfolia Rox. . . A yellow-flowered green-house shrub, a native of China.

3351 *2153*b* MAXIMILIA'NA Mart. (*Maximilian*, Prince Weid-Neuwied.) règia *Mart.* Palmàceæ. A palm growing to the height of 60 ft. A native of Brazil, whence it was introduced in 1825.

3352 *1413*a* MEGACARPÆ'A *Dec.* (*Megas*, great, *karpos*, fruit.) laciniàta *Dec.* Cruciàceæ. Biscutélla megacárpa *Fis.* A yellow-flowered biennial. Introduced from Siberia in 1818.

3353 663*a* MELANOSELI'NUM *Hofm.* (*Melas*, black, *selinon*, parsley; appearance.) decípiens *Hofm.* Umbellàceæ. No. 3676. in p. 220.

3354 *1118*b* MELANOPSI'DIUM *Col.* (*Melas*, black, *psidium*, guava.) nigrum *Col.* Rubiàceæ. A stove tree, producing cream-coloured flowers. Introduced in 1823.

3355 *904*c* MELI'COPE *Forst.* (*Meli*, honey, *kope*, incision; nectary of notched glands.) ternàta *Forst.* Rutàceæ. A New Zealand shrub introduced in 1822. It may be increased by cuttings, and grown in a mixture of peat and loam.

3356 *752*a* MELOCA'NNA *Trin.* (*Melon*, apple, *kanna*, a reed.) *bambusoides Trin.* Graminàceæ. *Bambùsa* baccífera *Roz.* A native of the East Indies, attaining the height of 20 ft. and requiring to be grown in loam.

3357 *1940*b* MELO'THRIA *L.* (*Melothron*, supposed to be bryony; similarity.) fœ'tida *Desv.* Cucurbitàceæ. Trichosánfœtidissima *L.* A genus of uninteresting trailing annuals, which produce yellow flowers from June to September.

3358 *1401*a* MENIO'CUS *Desv.* (*Mene*, the moon, *okkos*, eye; seeds?) linifòlium *Desv.* Cruciàceæ. *Alyssum linifòlium Step.* An ornamental little annual, a native of Caucasus, whence it was introduced in 1817. It produces its yellow flowers in June and July.

3359 * MENONVI'LLEA Dec. (*M. Thiéry de Menonville*, a French naturalist.) filifòlia *Fisch.* Cruciàceæ. An elegant greenish-white-flowered annual. Introduced from Chile in 1836.

3360 *1029*g* MERIA'NA Swz. (*M. S. Merian*, an entomological authoress.) leucántha *Swz.* Melastomàceæ. A genus of ornamental shrubs, natives of Jamaica. Three species are introduced, M. leucántha, M. purpùrea, and M. coccínea.

3361 *2413*a* MERTE'NSia Kth. (*Professor F. C. Mertens*, of Bremen.) lævigàta *Kth.* Urticàceæ.

3362 346*a* MESSERSCHMI'DIA L. (*D. Messerschmid*, a German botanist.) . . . . . Boraginàceæ. No. 2004. and 2005. in p. 124.

3363 *581*a* METASTE'LMA *R. Br.* (*Meta*, instead of, *stelma*, crown; append.) parviflòrum *R. Br.* Asclepiàceæ. A curious whitish-green-flowered West Indian twiner.

3364 1029*a* **Mico'nia** R. & P. (*Dr. D. Micon*, a Spanish botanist.) . . . Melastomàceæ. Nos. 6001. 6003. 6005. 6008. and 6015. in p. 364.

3365 *40*b* **Micra'nthemum** *Mx.* (*Micros*, small, *anthos*, flower.) orbiculàtum *Mx.* Primulàceæ. A pretty white-flowered perennial trailer. A native of Carolina. Introduced in 1826.

3366 *1546*b* **Micra'nthus** *Poir.* (*Mikros*, small, *anthos*, flower.) còchin-chinênsis *Lou.* Leg. Pap. Phas. A deciduous stove twiner, producing its white flowers from June to August.

3367 280*b* **Microca'le** *Lk.* (*Mikros*, small, *kalos*, pretty.) filifórme *Lk.* Gentianeæ. No. 1728. in p. 98.

3368 *313*a* **Microlæ'na** *Beauv.* (*Mikros*, small, *lenos*, wool; flower-stalk.) stipöldes *Beauv.* Graminàceæ. Ehrhárta stipöldes *Lab.* A curious grass, a native of New Holland, introduced in 1822.

3369 *603*b* **Microte'a** *Swz.* (*Microtes*, smallness; of parts of fructification.) maypurénsis *G. Don.* Phytolàcceæ. Ancistrocárpus maypurénsis *Kth.* A genus of curious little white-flowered tender annuals.

3370 *817*a* **Mi'llea** Cav. (*Julien Milla*, chief gardener at royal gardens, Madrid.) bifìora *Cas.* Asphodèleæ. A white-flowered bulbous-rooted plant, a native of Mexico, whence it was introduced in 1826.

3371 *33*a* **Millingto'nia** Rox. (*Sir T. Millington*, Sav. Prof. Oxford.) simplicifolia *Rox.* Oleàceæ. An ornamental stove tree, producing yellow flowers. A native of the East Indies. Introduced in 1828.

3372 *281*a* **Mitrasa'cme** *R. Br.* (*Mitra*, a mitre, *akme*, a point.) . . . . . Gentianàceæ. A genus of rather pretty New Holland herbaceous plants, producing white flowers, and requiring to be grown in sandy loam.

3373 *28*a* **Mnia'rum** *Forst.* (*Mniaros*, mossy.) bifìorum *Forst.* Chenopodiàceæ.

3374 *552*b* **Mogi'phanes** *Mart.* (Not explained.) virgàta *Schr.* Amarantàceæ. A curious loose-growing biennial or perennial. Introduced from Russia in 1836.

3375 *751*a* **Moline'ria** Coll. (*Ignatio Molinerio*, director of Turin bot. gar.) plicàta *Coll.* Hypoxidàceæ. A scarlet and yellow flowered herbaceous stove plant. A native of Java. Introduced in 1820.

3376 665*a* **Molospse'rmum** *Koch.* (*Molops*, a wheel, *sperma*, a seed.) peloponnesiacum *Koch.* Umbellàceæ. No. 3685. in p. 220.

3377 *147*a* **Mona'chne** *Beauv.* (*Monos*, one, *achne*, a glume.) unilateràlis *Beauv.* Graminàceæ. Milium villòsum *Lk.* An uninteresting tender annual, a native of the West Indies. Introduced in 1819.

3378 1110*a* **Mona'nthes** *Haw.* (*Monos*, one, *anthos*, a flower.) polyphýlla *Haw.* Crassulàceæ. No. 6338. in p. 408.

3379 *1220*a* **Monodo'ra** *Duval.* (*Monos*, one, *doron*, gift; fruit solitary.) Myristica *Duval.* Anonàceæ. *Anona* Myristica *Gae.* An ornamental shrub, a native of Jamaica. It may be increased by cuttings, and grown in a mixture of peat and loam.

3380 464*a* **Mono'psis** *Sal.* (*Monos*, one, *opsis*, a face.) conspícua *Sal.* Lobeliàceæ. No. 2742. in p. 168.

3381 * **Monota'xis** *Brong.* (*Monos*, one, *taxis*, series; male and female flowers.) simplex *Brong.* Euphorbiàceæ. A New Holland shrub, which may readily be increased by cuttings, and grown in a mixture of peat and loam.

3382 *1824*a* **Montano'a** Lal. (*Montano*, a Mexican patriot.) grandiflòra *Lal.* Comp. Helian. A genus of uninteresting yellow-flowered Mexican shrubs. They are readily increased by cuttings, and thrive in good common earth.

3383 *387*a* **Moreno'a** Lal. (*P. Moreno*, a Mexican botanist.) pátula *Lal.* Convolvulàceæ. A genus of scarlet-flowered Mexican twiners. A mixture of peat and loam suits the species.

3384 979*a* ***Mori'nga*** Dec. (Its Malabar name.) pterygospérma *Dec.* Leg. Cæs. Cass. No. 5852. in p. 350.

3385 * **Mori'sia** ? D. Don. (*Prof. Moris*, the discoverer.) hypogæ'a ? *D. Don.* Cruciàceæ. A curious and pretty half-hardy perennial, producing its yellow flowers in April. It is a native of Sardinia. Introduced in 1833. A light sandy loam suits the plant.

3386 * **Mo'rna** Lindl. (*Morna*, a heroine of the Northern romances.) nítida *Lindl.* Compósitæ. An elegant green-house under-shrub. Introduced from Sardinia in 1835.

3387 * **Morre'nia** Lindl. (*Professor Charles Morren* of Liège.) odoràta *Lindl.* Asclepiàceæ. A native of Buenos Ayres, produces fragrant green flowers, may be increased by cuttings, and grown in a light rich soil.

3388 1281*a* **Moscho'sma** *Rchb.* (*Moschos*, musk, *osme*, smell; odour.) ocymöides *Benth.* Labiàceæ. Nos. 8468. and 8475. in p. 510.

3389 †1030 ***Mourí'ria*** J. (*Mouriri*, its name in Guiana.) myrtillöides *Aub.* Memecylàceæ. No. 6022. in p. 364.

3390 1548*g* ***Mucu'na*** Adan. & Dec. Cow Itch. (*Mucuna-Guaca*, name in Brazil.) . . . . . Leg. Pap. Phas. Nos. 10293, 10294, and 10295., also Nos. 10268, and 10269.

3391 *1440*a* **Murica'ria** *Desv.* (*Muricatus*, full of prickles.) prostràta *Desv.* Cruciàceæ. *Bunias* prostràta *Desf.* An uninteresting trailing annual, producing its white flowers in June and July. Introduced from the South of Europe in 1821.

3392 1459*a* ***Murucu'ia*** J. (*Murucuja*, its name in Brazil.) ocellàta *Pers.* Passifloràceæ. No. 9400., also 9401.

183 **Mygalu'rus** *Lk.* (*Mygale*, a field mouse; *oura*, a tail.) . . . . . Graminàceæ. Vúlpia species. Nos. 1118, 1119. and 1122.

3393 1121*a* **My'rcia** Dec. (A surname of Venus.) àcris *Dec.* Myrtàceæ. No. 6978. and 6980.

3394 1577*e* **Myriade'nus** *Desv.* (*Myrios*, innumerable, *aden*, gland.) tetraphýllus *Desv.* Leg. Pap. Hed. Euh. Ornithopus tetraphýllus.

3395 685*a* **Myrica'ria** *Desv.* (*Myrike*, Greek name of tamarisk.) germánica. Tamaricàceæ. No. 3826. in p. 228.

3396 *940*a* **Myrospe'rmum** *H. & B.* (*Myros*, balsam, *sperma*, a seed.) toluíferum *Mx.* Leg. Pap. Soph. A medicinal tree, a native of South America. It may be readily increased by cuttings, and thrives in a mixture of peat and loam.

3397 *1978*a* **Na'jas** *W.* (*Naias*, a water nymph; habitat.) màjor *All.* Fluviàceæ. N. monospérma *W.* A curious annual aquatic, a native of Europe. Introduced to England in 1816.

813 **Narthe'cium** *Mohr.* (*Narthex*, a rod; stem.) ossífragum *Hud.* Juncàceæ. *Abàma* ossífraga *Dec.*

3398 *752*b* ***Na'stus*** *J.* (*Nastos*, the Greek name for a kind of reed.) latifòlia *Spr.* Graminàceæ. *Bambùsa* latifòlia *H. & B.* A native of Cumana, whence it was introduced in 1818. It grows to the height of 20 ft.

3399 *1796*a* **Nectaresco'rdum** *Lindl.* (*Nektar*, honey, *skorodon*, garlic.) siculum *Uc.* Asphodèleæ. *Allium* siculum *Uc.*

3400 2075*a* ***Negu'ndo*** Moe. (Meaning unknown.) fraxinifòlium *Nut.* Aceràceæ. No. 14294. in p. 868.

3401 *1118*a* **Ne'litris** *Gae.* (*Ne*, priv., *elytron*, seed-case; berry unpartitioned.) *Jambosélla* Gae. Myrtàceæ. *Psidium* decaspérmum *L. fil.* A white-flowered stove shrub, growing to the height of 10 ft. Introduced from the Society Isles in 1810.

3402 *48*a* **Nelso'nia** R. Br. (*Dr. Nelson*, a botanist who accompanied Capt. Cook.) hirsùta *R. Br.* Acanthàceæ. An uninteresting red-flowered East Indian plant. Introduced in 1818.

3403 *2075*b* **Nemopa'nthes** *Rafi.* (*Nemos*, grove, *ops*, eye, *anthos*, flower.) canadénsis *Dec.* Celastràceæ. fasciculàris *Rafi.* *Ilex* canadénsis *Mx.*

3404 1394*a* **Neurolo'ma** *Dec.* (*Neuron*, a nerve, *loma*, a fringe.) arabidifòrum *Dec.* Cruciàceæ. No. 9164. in p. 548.

3405 *2023*c* **Neurospe'rma** *Rafi.* (*Neuron*, a nerve, *sperma*, seed.) cuspidàta *Rafi.* Cucurbitàceæ. A trailing annual, producing its yellow flowers from June to September. Introduced from Kentucky in 1827.

3406 1580*c* **Nicolso'nia** Dec. (*M. Nicolson*, wrote on nat. hist. of St. Domingo.) barbàta *Dec.* Leg. Pap. Hed. Euh. Hedýsarum barbàtum *L.*

3407 *1162*b* **Niebu'hria** Dec. (*Carslen Niebuhr*, a traveller in Arabia.) cáffra *Dec.* Capparidàceæ. Cratæ'va cáffra *Burc.* A New Holland shrub, introduced in 1818. It thrives in a sandy peat soil, and produces white flowers.

3408 1699*a* **No'cca** Cav. (*Dominic Nocca*, a professor at Ticin.) rùbra *Swt.* Comp. Vern. No. 11600. in p. 692.

3409 *541*a* Noise'ttia H. & B. (*L. C. Noisette*, nurseryman at Paris.) longifòlia *H. & B.* Violàceæ. An ornamental shrub, producing cream-coloured flowers. A native of Cayenne, whence it was introduced in 1824.

3410 *483*a* *Nonate'lia* Aub. (Its name in Guiana.) officinàlis *Aub.* Rubiàceæ. Psychótria involucràta *Swz.* A native of Guiana, introduced in 1827. It is a green-flowered evergreen shrub.

3411 *1163*b* *Nora'ntea* Aub. (*Gonoro-Antegri*, its name in Guiana.) guianénsis *Aub.* Marcgraaviàceæ. *A'scyrum* violàceum *Aub.* A shrub, producing pale violet-coloured flowers. Introduced in 1818.

3412 1350*a* Nycteri'nia *D. Don.* (*Nycterinos*, nocturnal; expansion of flowers.) . . . . Scrophulariàceæ. Nos. 8827 and 8828. p. 528.

3413 594*f* Obe'sia *Haw.* (*Obesus*, fat; flowers.) . . . . . Asclepiàceæ. Nos. 3331, 3332. in p. 200.

3414 *420*a* Ochro'sia *J.* (*Ochros*, pale; wood.) borbónica *J.* Apocynàceæ. Cérbera borbónica *Spr.* A stove shrub, introduced from Bourbon in 1823, requiring to be grown in a mixture of peat and loam.

3415 892*q* Octope'ra *D. Don.* (*Okto*, eight, *pera*, a sack; capsule 8-celled.) Bergiàna D. Don. Ericàceæ. Type, No. 5395. in p. 316.

3416 * Odontarrhe'na *Mey.* (*Odous*, a tooth, *arrhen*, a male; filaments.) microphýlla *Led.* Cruciàceæ. A pretty little perennial trailer, introduced in 1832, and thrives in a mixture of loam and peat.

3417 *1985*b* Œnoca'rpus *Mart.* (*Oinos*, wine, *karpos*, fruit.) *Bataúa* Mart. Palmàceæ. A palm, attaining the height of 40 ft. A native of South America, whence it was introduced in 1820.

3418 711*c* Oi'leus Haw. (A king of the Locrians, and father of Ajax.) obscíssus *Haw.* Amaryllàceæ. *Narcíssus* obscíssus *Haw.*

3419 *83*d* O'lax *L.* (*Olax*, a furrow; the flower.) scándens *Rox.* Olacàceæ. A white-flowered East Indian climber. Introduced in 1820.

3420 *2026*a* Omala'nthes *Grah.* (*Homalos*, smooth, *anthos*, flower.) populifòlia *Grah.* Euphorbiàceæ. A New Holland shrub, producing its white flowers from July to September. Introduced in 1825.

3421 *969*a* Omphalo'bium *Jac.* (*Omphalos*, the navel, *lobos*, a pod.) Schòtia Jac. Legum. Cæs. Cass. Schòtia latifòlia *Jac.* A Cape shrub, producing pale purple flowers from May to July. Introduced in 1820.

3422 * Oncorhy'nchus *F. & M.* (*Onkos*, tumour, *rhygchos*, beak; lip.) tenéllus *F. & M.* Rhinanthàceæ. A delicate biennial. Introduced in 1837.

3423 1588*a* Onobry'chis *Tou.* (*Onos*, ass, *brycho*, to gnaw.) sativa *Lam.* Leg. Pap. Hed. Euh. No. 10597., also Nos. 10584. 10598, 10599. 10603. and 10604.

3424 671*a* Opo'panax *Koch.* (*Opos*, juice, *panax*, the plant yielding it.) Chirónicum Koch. Umbellàceæ. No. 3725. in p. 222.

3425 1632*a* Opori'nea *D. Don.* (*Oporinos*, autumnal; time of flowering.) autumnàlis *D. Don.* Comp. Cich. No. 11167. in p. 670.

3426 594*e* O'rbea *Haw.* (*Orbis*, an orb; flower.) . . . . . Asclepiàceæ. Nos. 3318. to 3330. in p. 200.

3427 626*a* Orla'ya Hofm. (*Orlay*, probably the name of some botanist.) . . . . . Umbellàceæ. Nos. 3523 and 3528. in p. 210.

3428 1577*d* Ormoca'rpum *Beauv.* (*Ormos*, necklace, *karpos*, fruit.) *sennoides Dec.* Leg. Pap. Hed. Euh. No. 10587 in p. 682.

3429 845*b* Ornithoglo'ssum *Sal.* Bird's Tongue. (*Ornis*, bird, *glossa*, tongue; petals.) víride *Sal.* Melanthàceæ. No. 4921.

3430 *664*b* Oste'ricum *Hofm.* (*Osteon*, a bone; seeds.) praténse *Hofm.* Umbellàceæ. Angélica praténsis *Spr.*

3431 *85*b* *Outea* Aub. (A Caribe name.) bíjuga *Dec.* Leguminàceæ. An East Indian shrub. Introduced in 1823

3432 *989*c* Oxle'ya Cun. (*John Oxley*, late surveyor-general of N. S. W.) xanthóxylon *Cun.* Meliàceæ. A New Holland timber tree, attaining the height of 100 ft. Introduced in 1828.

3433 81*a* Oxy'baphus *R. & P.* (*Oxys*, acid, *baphe*, dyer's colour.) . . . . . Nyctaginàceæ. Nos. 569, 570, 571. in p. 36.

3434 *578*b* Oxype'talum *R. Br.* (*Oxys*, sharp, *petalon*, a petal.) appendiculàtum *Mart.* Apocynàceæ. A stove twiner. Introduced from Brazil in 1823.

3435 †857 Oxy'ria *Hill.* (*Oxys*, acid.) renifórmis *Sm.* Polygonàceæ. No. 5034. in p. 294.

3436 769*c* Pachide'ndron *W.* (*Pachys*, thick, *dendron*, a tree.) . . . . . Hemerocallídeæ. Nos. 4472. 4447, 4448. 4454, and 4455. in p. 262.

3437 1548*c* Pachyrhi'zus *Rich.* (*Pachys*, thick, *rhiza*, root; tuberous.) angulàtus *Rich.* Leg. Pap. Phas. No. 10284. in p. 616.

3438 892*b* Pa'chysa *D. Don.* (*Pachys*, thick; substance of corolla.) árdens *D. Don.* Ericàceæ. Type, No. 5280. in p. 310.

3439 *59*a* *Pædero'ta* *L.* (Ancient name of a sp. of Acánthus.) Bonaròta L. Scrophulariàceæ. A little annual rock plant, producing blue flowers. A native of Austria, whence it was introduced in 1818.

3440 *483*b* Palicu'ria Aub. (*Le Palicour*, of Guiana.) crócea *R & S.* Rubiàceæ. Psychótria crócea *Swz.* A West Indian shrub. Introduced in 1823. It may be increased by cuttings, and thrives in sandy loam.

3441 * *Panæ'tia* Cass. (Not explained.) fúlva *Lindl.* Com. Helich. A pretty annual, producing its red and golden-coloured flowers in May. Introduced from the Swan River in ?1837.

3442 *205*a* Pappo'phorum *Schreb.* (*Pappos*, down, *phoreo*, to carry.) nígricans *R. Br.* Graminàceæ. An uninteresting New Holland grass. Introduced in 1822.

3443 *2007*e* *Paria'na* Aub. (Its name in Guiana.) campéstris *Aub.* Graminàceæ. A curious stove undershrub, introduced from Cayenne in 1803.

3444 *1548*d* Paro'chetus *Ham.* (*Para*, nigh, *ochetos*, a brook.) commúnis *Hum.* Leg. Pap. Phas. A purple-flowered half-hardy creeper. Introduced from Nepal in 1820.

3445 *413*b* Parso'nsia R. Br. (*Dr. Parsons*, a Scotch botanist.) corymbósa *R. Br.* Apocynàceæ. *Echites* corymbósa *Jac.* A South American twiner. Introduced in 1820.

3446 429*a* Patago'nula *L.* (*Patagonia*, its native country.) americàna *L.* Boraginàceæ. No. 2420. in p. 150.

3447 594*i* Pectina'ria *Haw.* (*Pecten*, a comb.) articulàta *Haw.* Asclepiàceæ. No. 3299. in p. 200.

3448 *2147*a* Pentacry'pta *Leh.* (*Pente*, five, *krypte*, a vault.) atro-purpúrea *Leh.* Umbellàceæ. An uninteresting purple-flowered stove perennial. A native of Mexico. Introduced in 1829.

3449 *1616*a* Pentade'sma *R. Br.* Butter and Tallow Tree. (*Pente*, five, *desme*, bundle; stamens.) butyrácea *R. Br.* Guttàceæ. A stove tree, growing to the height of 30 ft. Introduced from Sierra Leone in 1822.

3450 77*a* Pepero'mia *R. & P.* (Analogous to *Piper*.) . . . . . Piperàceæ. Nos. 500. 509. and 520. to 543. in p. 28.

3451 160*a* Periba'lia *Trin.* (*Periballo*, to encompass.) hispánica *Trin.* Graminàceæ. No. 1008. in p. 56.

3452 *1448*a* Peri'toma *Dec.* (*Peritome*, a cutting round about; base of cal.) serrulàta *Dec.* Capparidàceæ. Cleòme serrulàta *Ph.* An ornamental annual, producing its purple flowers from June to August. A native of Missouri. Introduced in 1823.

3453 934*b* Pe'rsea *Gaz.* Alligator Pear. (Used by Theophrastus for an Egyptian tree.) gratíssima *Gae.* Lauràceæ. No. 5651.

3454 1128*a* Pe'rsica *Tou.* (Originally from *Persia*.) vulgàris *Lam.*, No. 7020.; lævis *Dec.*, No. 7020. *β.* Rosàceæ.

3455 465*a* Petroma'rula *Pers.* (*Petra*, a rock, *maron*, an herb.) pinnàta *Pers.* Campanulàceæ. No. 2760. in p. 168.

3456 673*a* Petrosel'num *Hofm.* (*Petra*, a rock, *selinon*, parsley; habitat.) satívum *Hofm.* Umbellàceæ. No. 3617., also 3603. and 3690.

3457 *1093*a* Phacospe'rma *Haw.* (*Phakos*, a lentil, *sperma*, a seed.) peruviàna *Haw.* Ficoidàceæ. A perennial stove plant, producing its purple flowers in June and July. Introduced in 1820.

3458 808*b* Phala'ngium *Mx.* (*Phalangx*, a venomous spider; cures bite.) . . . . Asphodèleæ. Nos. 4804. and 4824. in p. 290.

3459 * PHA'RIUM *Herb.* (*Pharos*, a veil; ovarium in membranous cup.) fistulòsum *Herb.* Asphodèleæ. A purple-and-white-flowered bulbous-rooted plant. A native of Mexico. Introduced in 1831.

3460 * PHILODE'NDRON *Lindl.* (*Phileo*, to love, *dendron*, a tree; habit.) crassínervium *Lindl.* Aràceæ. A curious greenish-white flowered Brazilian climber, growing to the height of about 20 ft. Introduced in 1835.

3461 711*l* PHILO'GYNE *Haw.* (*Phileo*, to love, *gyne*, a female; anthers conniving over the stigma.) . . . . Amaryllàceæ. Nos. 4022. and 4021.

3462 1730*b* PHŒNO'COMA *D. Don.* (*Phoinos*, bloody, *kome*, hair; involucre.) prolífera *D. Don.* Comp. Vern. No. 11803. in p. 702.

3463 212*a* PHOLIU'RUS *Trin.* (*Pholis*, a scale, *oura*, a tail.) pannónicus *Trin.* Graminàceæ. No. 1280. in p. 72.

3464 174*b* PHRAGMI'TES *Trin.* (*Phragmos*, a hedge; forming hedges.) commùnis *Trin.* Gramíneæ. No. 1072. in p. 60.

3465 739*a* PHYCE'LLA *Lindl.* (Dim. of *phykos*, red alkanet; colour.) . . . Amaryllàceæ. No. 4243. and 4244. p. 252.

3466 *2016*b* PHYLLO'CLADUS *Rich.* (*Phyllon*, a leaf, *klados*, a branch.) rhomboidàlis *Rich.* Conàceæ. Podocárpus asplenifòlia *Lab.* A tree attaining the height of 20 ft. A native of Van Diemen's Land, whence it was introduced in 1825.

3467 1016*g* PHYLLO'DOCE Sal. (One of Cyrene's attendant nymphs.) taxifòlia *Sal.* Ericàceæ. No. 5413. in p. 316.

3468 *1464*s* PHYLLO'LOBUM *Fis.* (*Phyllon*, a leaf, *lobos*, a pod.) zanzibarénse *Boj.* Leg. Phyllol. An uninteresting herbaceous stove plant. Introduced in 1826.

3469 665*a* PHYSOSPE'RMUM *Cus.* (*Physao*, to inflate, *sperma*, seed.) commutàtum *Spr.* Umbellàceæ. No. 3687. in p. 220.

3470 *2108*b* PHYTE'LEPHAS *R. & P.* (*Phyton*, plant, *elephas*, ivory.) macrocárpa *R. & P.* Pandanàceæ. An ornamental stove shrub, introduced from Peru in 1822.

3471 *1577*c* PICTE'TIA Dec. (*A. Pictet*, a celeb. physician.) squamàta *Dec.* Leg. Pap. Hed. Euh. Robínia squamàta *Vahl.*

3472 *904*e* PIERA'RDIA ROX. (*Mr. Pierard*, of Kew Green.) sápida *Rox.* Sapindàceæ. A stove tree, growing to the height of 20 ft., and producing yellow flowers. A native of Sumatra. Introduced in 1820.

3473 1016*f* PI'ERIS D. Don. (A general appellation of the muses, Pierides.) japónica *D. Don.* Ericàceæ. No. 5945. in p. 360.

3474 943*a* PIPTA'NTHUS *Swt.* (*Pipto*, to fall, *anthos*, flower; soon falling off.) nepalénsis *Swt.* Leg. Pap. Soph. No. 5680. in p. 342.

3475 141*b* PIPTATHE'RUM *Beauv.* (*Pipto*, to fall, *ather*, an awn.) . . . . . Graminàceæ. Nos. 931, 932, and 933. in p. 52.

3476 1060*b* PISTORI'NIA *Dec.* (*Pistron*, a cup; affinity to Cotylèdon.) hispánica *Dec.* Crassulàceæ. No. 6416. in p. 382.

3477 *280*c* PLA'DERA *Rox.* (*Pladaros*, abounding in juice.) virgàta *Rox.* Gentianàceæ. An East Indian biennial, producing red flowers. Introduced in 1820.

3478 *1565*y* PLAGIO'LOBUM *Swt.* (*Plagios*, transverse, *lobos*, a pod.) flicifòlium *Swt.* Leg. Pap. Lot. Gen. Hòvea flicifòlia *Cun.* A genus of ornamental blue-flowered New Holland shrubs; may be increased by cuttings, and grown in sandy peat.

3479 *1294*g* PLATYCA'RPUM *Kth.* (*Platys*, broad, *karpos*, seed-pod.) orinocénse *Kth.* Bignoniàceæ. A tree, attaining the height of 20 ft., and producing pale rose-coloured flowers. Introduced in 1813.

3480 *1464*a* PLATYCHI'LUM *Delau.* (*Platys*, broad, *cheilos*, lip; corolla.) . . . . . Celsiànum Her. am. Leg. Pap. Lot. Gen. Gompholòbium Celsiànum Hort. A yellow-flowered New Holland shrub, which thrives in a mixture of sandy loam and peat. Introduced in 1820.

3481 462*c* PLATYCO'DON *A. Dec.* (*Platys*, broad, *kodon*, a bell.) grandifiòra *A. Dec.* Campanulàceæ. No. 2647. in p. 164.

3482 673*d* PLATYSPE'RMUM *Hofm.* (*Platys*, broad, *sperma*, seed.) pulchérrimum *Koch.* Umbellàceæ. No. 3527., also No. 3521.

3483 1557*a* PLATY'STYLIS *Swt.* (*Platys*, broad, *stylis*, style.) sessilifòlia *Swt.* Leg. Pap. Vic. No. 10335. in p. 618.

3484 *938*a* PLE'IA *Mx.* (*Pleias*, the seven stars; flowers.) tenuifòlia *Mx.* Juncàceæ. A curious little brown-flowered bog plant. Introduced from Carolina in 1824.

3485 1029*d* PLERO'MA *D. Don.* (*Pleroma*, fulness; cells of capsule.) . . . . Melastomàceæ. Nos. 6018. and 6019. in p. 364., also Nos. 5430. 5434. and 5436. in p. 318.

3486 665*b* PLEUROSPE'RMUM *Hofm.* (*Pleuron*, a rib, *sperma*, seed.) austríacum *Hofm.* Umbellàceæ. No. 3686. in p. 220.

3987 1603*a* POCO'CKIA Ser. (*Rd. Pococke*, a traveller in the Levant.) crética *Ser.* Leg. Pap. Lot. Trif. No. 10776. in p. 640.

3488 594*c* PODA'NTHES *Haw.* (*Pous*, a foot, *anthos*, a flower.) . . . . (Asclepiàceæ.) Nos. 3308. to 3314. in p. 200.

3489 *856*b* PODO'PTERUS *Kth.* (*Pous*, a foot, *pteris*, a wing.) mexicànus *Kth.* Polygonàceæ. An ornamental greenhouse undershrub. Introduced in 1825.

3490 * PODOTHE'CA *Cass.* (*Pous*, foot, *theca*, sheath; stalks of achenia.) angustifòlia *Cass.* Comp. Senec. Podospérma angustifòlia *Lab.* A curious yellow-flowered annual. Introduced in 1837.

3491 *1282*a* POGOSTE'MON *Desf.* (*Pogon*, a beard, *stemon*, a stamen.) plectranthöides *Desf.* Labiàceæ. A little white-flowered half-hardy undershrub. It may readily be increased by cuttings, and grown in sandy peat.

3492 *1464*n* POIRE'TIA Ven. (*J. L. M. Poiret*, editor of *Encyc. Botanique.*) scándens *Ven.* Leg. Pap. Hed. Euh. Turpínia punctàta *Pers.* Glycine punctàta *W.* A stove climber. Introduced from Caraccas in 1823.

3493 1030*a* POI'VREA Com. (*N. Poivre*, intendant of the Mauritius in 1766.) coccínea *Dec.* Combretàceæ. Nos. 5562, and 5563.

3494 1097*a* POLANI'SIA *Rafi.* (*Poly*, very much, *anisos*, unequal; stamens ?) . . . Capparidàceæ. Nos. 9323, 9324, and 9325. in p. 558.

3495 2129*b* POLLI'NIA Spr. (*Cyrus Pollini*, prof. at Verona.) . . . . Graminàceæ. Nos. 14208. and 14211.

3496 *1692*a* POLY'PTERIS *Nut.* (*Polys*, many, *pteron*, a wing.) integrifòlia *Nut.* Comp. Heliántheæ. Hymenopáppus integrifòlius *Spr.*

3497 1495*b* POLY'SPORA *Swt.* (*Polys*, many, *spora*, seed; fruit.) axillàris *Swt.* Ternstrœmiàceæ. No. 9956. in p. 596.

3498 540*c* POMBA'LIA Van. (*Marquis de Pombal*, a Portuguese statesman.) *Itùba* Ging. Violàceæ. No. 3072. in p. 188.

3499 *387*b* PORA'NA *Brm.* (*Poreno*, to journey; extension of branches.) volùbilis *Brm.* Convolvulàceæ. An East Indian white-flowered twiner, attaining the height of 50 ft. Introduced in 1820.

3500 *693*a* PORANTHE'RA *Rud.* (*Poros*, a pore, *anthera*, an anther.) ericifòlia *Rud.* . . . . A curious little white-flowered New Holland undershrub. Introduced in 1824.

3501 *880*a* PORLIE'RA R. & P. (*P. Antoine Porlier*, a Spanish promoter of botany.) hygrométrica *Fl. Per.* Zygophyllàceæ. An ornamental undershrub, a native of Peru, whence it was introduced in 1820. The plant thrives in a mixture of sandy loam and peat.

3502 *2134*a* POTAMO'PHILA *R. Br.* (*Potamos*, river, *phileo*, to love.) parvifòra *R. Br.* Graminàceæ.

3503 *1059*f* POUPA'RTIA *Com.* (Called *Bois de Poupart*, by inhabitants of Bourbon.) borbónica *Lam.* Terebinthàceæ. A purple-flowered timber tree, growing to the height of about 40 ft. Introduced in 1825.

3504 *1311*a* PRE'MNA *L.* (*Premnon*, a stump of a tree; trunk.) reticulàta *J.* Verbenàceæ. Introduced from Jamaica in 1819; may be increased by cuttings, and grown in sandy loam.

1630 **Prena'nthes** *L.* (*Prenes*, drooping, *anthos*, flower.) murālis *L.*, Mycēlis anguldsa *Cass.*; lācerifōlia *L.*, Phæcāsium lapsanoïdes *Cass.* Comp. Cich.

3505 *411*e* **Presto'nia** R. Br. (*Dr. C. Preston*, a correspondent of Ray.) tomentōsa *R. Br.* Apocynàceæ. A genus of stove twiners, which may be increased by cuttings, and thrive in a mixture of peat and loam.

3506 1565*a* **Priestle'ya** Dec. (*M. Priestley*, a physiological botanist.) . . . . . Leg. Pap. Lot. Gen. Nos. 10428. to 18434. in p. 624.

3507 463*a* **Prismatoca'rpus** *Herit.* (*Prisma*, a prism, *karpos*, fruit.) nitidus *Herit.* Campanul No. 2694., also 2693. 2695, 2696, 2697, and 2698.

3508 *1962*a* **Pro'cris** Com. (The wife of Cephalus.) punctāta *Ham.* Urticàceæ. An uninteresting green-house perennial, producing green flowers in July and August. A native of Nepal. Introduced in 1820.

3509 *228*a* **Proserpina'ca** *L.* (*Proserpo*, to creep.) palústris *L.* Haloràgeæ. A curious white-flowered annual aquatic. A native of Canada. Introduced in 1818.

162 **Psa'mma** *Beauv.* (*Psammos*, sand; its place of growth.) arenària *Beauv.* Graminàceæ. Ammóphila arenària *Hort.*

3510 1548*f* **Psophoca'rpus** *Neck.* (*Psophos*, a sound, *karpos*, a fruit.) tetragonólobus *Dec.* Leg. Pap. Phas. No. 10276. in 616.

3511 *1439*a* **Psychi'ne** *Desf.* (*Psyche*, a butterfly; wing of seed.) stylōsa *Desf.* Cruciàceæ. Thláspi Psychine *W.* An uninteresting annual, a native of the South of Europe. Introduced in 1818.

3512 *300*a* **Ptelei'dium** *Thou.* (Diminutive of *ptelea*, an elm.) ovātum *Thou.* Celastràceæ. Ptèlea ovàta *Lou.*, Seríngia ovàta *Spr.* An evergreen shrub, a native of Madagascar, and was introduced in 1818. It is increased by cuttings, and thrives in a mixture of sandy peat and loam.

3513 261*c* **Pteroce'phalus** *Vail.* (*Pteron*, wing, *kephale*, head; seeds.) . . . . . Dipsàceæ. Nos. 1559, 1560, and 1561. in p. 90.

3514 * **Pteroste'gia** *F. & M.* (*Pteron*, wing, *stegos*, covering; involucre winged.) drymarioïdes *F. & M.* Polygonàceæ. An annual.

3515 *1788*a* **Ptiloste'phium** *Kth.* (*Ptilon*, feather, *stephos*, crown; pappus.) coronopifōlium *Kth.* Comp. Helian. A genus of curious yellow-flowered tender annuals, natives of Mexico.

3516 642*a* **Ptycho'tis** *Koch.* (*Ptyche*, a plait, *ous*, an ear; petals.) ammoïdes *L.* Umbellàceæ. No. 3581. in p. 214.

3517 1464*l* **Puera'ria** Dec. (*M. M. N. Puerari*, Prof. at Copenhagen.) tuberōsa *Dec.* Leg. Pap. Lot. Clit. No. 10578. in p. 632.

3518 *246*a* **Qua'dria** R. & P. (*Antoine de la Quadra*, a Spanish cultivator.) heterophýlla *R. & P.* Proteàceæ. *Guevina Avellana Mol.* An evergreen green-house tree, attaining the height of 40 ft. A native of Chile. Introduced in 1826.

3519 *20*c* **Qua'lea** Aub. (Name given to the tree by the Indians of Guiana.) violàcea *Mart.* Vochyàceæ. A Brazilian tree. Introduced in 1824.

3520 711*i* **Que'ltia** Haw. (*Nicholas Le Quelt*; discoverer of original species.) . . . . . Amaryllàceæ. No. 4035. in p. 240.

3521 533*b* **Raspa'lia** Brong. (*Raspail*, a French botanist.) microphýlla *Brong.* Bruniàceæ. No. 2998. in p. 184.

3522 1800*a* **Ratabi'da** Raf. (Meaning unknown.) columnàris *Raf.* Compósitæ. No. 12462. in p. 730.

3523 *1355*a* **Rehma'nnia** Libosch. (An unexplained name.) chinensis *Fis.* Scrophulariàceæ. Gerárdia glutinōsa *Bunge.* A curious dingy-flowered perennial. Introduced in 1835.

3524 *1464*i* **Requie'nia** Dec. (*M. Requien*, of Avignon, a French botanist.) obcordàta *Dec.* Leg. Pap. Lot. Gen. Podalýria obcordàta *Lam.* A stove shrub, producing its yellow flowers in July. Introduced from Senegal in 1825.

3525 *200*a* **Rhabdo'chloa** *Beauv.* (*Rhabdos*, a twig, *chloa*, grass.) virgàta *Beauv.* Graminàceæ. Cynosūrus virgātus *L.* Chlòris pœformis *Humb.* A pretty annual grass, introduced from the West Indies in 1820.

3526 1818*a* **Rhapo'ntica** *Dec.* (*Rha*, rhubarb, *Ponticus*, of Pontus.) scariōsa *Dec.* Comp. Card. No. 12612., also 12538.

3527 *1157*a* **Rhee'dia** L. (*Henr. van Rheede van Draakenstein*, patron of botany.) javánica *Hort.* Guttàceæ. An evergreen stove tree, introduced in 1826. It may be increased by cuttings, and grown in a mixture of sandy loam and peat.

3528 769*b* **Rhipidode'ndron** *W.* (*Rhipis*, a fan, *dendron*, a tree.) plicátile *Haw.* Hemerocallàceæ. No. 4473. in p. 264.

3529 1553*a* **Rhyncho'sia** *Lou.* (*Rhynchos*, beak; keel.) . . . Leg. Pap. Phas. Nos. 10298. 10301, 10302. 10304, 10305. 10309. and 10311. in p. 618.

3530 809*a* **Richa'rdia** Kth. (*L. C. Richard*, an eminent Fr. bot.) æthiópica *Kth.* Aràceæ. No. 5069. in p. 298.

3531 †833 **Richardso'nia** Kth. (*Rich. Richardson*, an Engl. bot.) scàbra *Kth.* Rubiàceæ. No. 4936. in p. 288.

3532 1086*a* **Richie'a** R. Br. (*Mr. Richie*, a traveller, died at Tripoli, 1820.) frágrans *R. Br.* Capparidàceæ. No. 6601. in p. 396.

3533 1456*a* **Riedle'ia** Ven. (*M. Riedle*, accompanied Capt. Baudin round the world.) . . . Byttneriàceæ. Nos. 9386. and 9387. p. 564.

3534 *336*a* **Ri'ndera** Pal. (*Rinder*, dean of medicine in Moscow.) lævigàta *R. & S.* Boraginàceæ. R. tetráspis *Pal.* Cynoglóssum Ríndera. *Pal.* An ornamental perennial, producing red flowers. Introduced from Siberia in 1818.

3535 *2129*a* **Ripi'dium** *Trin.* (*Rhipidium*, little fan; applicat. not evident.) Ravénnæ *Trin.* Graminàceæ. Eriánthus Ravénnæ *Beauv.*

3536 *786*c* **Ripo'gonum** *Forst.* (*Ripos*, a flexile twig, *gonos*, a shoot.) álbum *R. Br.* Smilàceæ. A perennial climber, a native of New Holland. Introduced in 1820.

3537 *1059*e* **Robe'rgia** Schreb. (*Laurent Roberg*, prof. med. at Upsal.) frutéscens *W.* Terebinthàceæ. It produces white flowers. A native of Guiana, and was introduced in 1823.

3538 1641*a* **Rodi'gia** Spr. (*Rodig*, a friend of Sprengel's.) . . . . . Comp. Cich. Nos. 11310. and 11313.

3539 993*a* **Roe'pera** Lindl. (*J. Roeper*, author of Monograph of German and Hungarian Euphorbiàceæ.) aurantìaca *Lindl.* Zygophylläceæ.

3540 756*a* **Ro'hdea** Roth. (*Mich. Rohde*, of Bremen, in Germany.) japónica *Roth.* Aràceæ. No. 4319. in p. 256.

3541 *184*a* **Rostra'ria** *Trin.* (*Rostrum*, a beak.) pubéscens *Trin.* Graminàceæ. Brómus dactylöides *Roth*, Dáctylis púngens *Horn.* An European annual grass. Introduced in 1820.

3542 1521*a* **Rudo'lphia** W. (*W. J. H. Rudolph*, a botanist of Jena.) dùbia *Ham.* Leg. Pap. Phas. No. 10308. in p. 618.

3543 *529*b* **Ru'ysch***ia* Jac. (*F. Ruysch*, M.D., a celebrated Dutch anatomist.) clusiæfolia Jac. Marcgraaviàceæ. A native of the West Indies, and was introduced in 1823. It produces purple flowers.

3544 *988*a* *Sando'ricum* Cav. Sandal Tree. (*Santoor*, the aboriginal name.) índicum *Cav.* Meliàceæ. A West Indian timber tree, growing to the height of about 40 ft., and producing white flowers. Introduced in 1820.

3545 *583*a* **Sarco'lobus** *R. Br.* (*Sarx*, flesh, *lobos*, a pod.) globōsus *R. Br.* Asclepiàceæ. A white-flowered East Indian twiner, growing to the height of about 16 ft. Introduced in 1823.

3546 *1212*e* **Saurau'ja** W. (*Sauraujo*, a Spanish botanist ?) excélsa *W.* Ternstrœmiàceæ. A shrub, a native of Caraccas. Introduced in 1820, and thrives in a mixture of peat and loam.

1041 **Saxi'fraga** *L.* (*Saxum*, stone, *frango*, to break; medical qualities.) . . . . Saxifragàceæ. Leiógyne species *Don.* Nos. 6072. 6080. 6083, 6084, and 6085.

3547 182*a* **Schedono'rus** *Beauv.* (*Schedon*, near to, *oros*, a mountain.) . . . . . Graminàceæ. Nos. 1091. 1099. 1101, 1102. 1108, 1109. and 1111. in p. 62.

3548 *786*b* **Schelha'mmera** R. Br. (*C. C. Schelhammer*, prof. at Jena.) undulàta *R. Br.* Melanthàceæ. A small evergreen purple-flowered herbaceous plant, a native of New Holland. Introduced in 1824.

3549 711*k* **Schisa'nthes** *Haw.* (*Schizo*, to cut, *anthos*, a flower; petals.) . . . . Amaryllàceæ. No. 4010. in p. 240.

3550 *673*b* SCHIZOME'RIA *D. Don.* (*Schizo*, to cut, *meris*, part; cut petals.) ovàta *D. Don.* Araliàceæ. A white-flowered New Holland shrub. Introduced in 1825.

3551 †882 SCHMIDE'*lia* L. (*C. C. Schmidel*, prof. bot. acad. of Erlang.) . . . Sapindàceæ. Nos. 5099. and 5100. in p. 302.

3552 76*b* SCHMI'DT*ia* Trat. (*Schmidt*, a German botanist.) súbtilis *Trat.* Graminàceæ. Coleánthus súbtilis *R. & S.*

3553 *647*a* SCHU'LTZ*ia* Spr. (*M. Schultz*, a celeb. Germ. botan.) crinìta *Spr.* Umbellàceæ. *Sison* crinìtum *Pall.* An uninteresting umbelliferous biennial, a native of Siberia, whence it was introduced in 1818.

3554 696*a* SCIODAPHY'LLUM *Br.* (*Skiodes*, shady, *phyllon*, leaf.) digitàtum *G. Don.* Araliàceæ. No. 3863. in p. 230.

3555 311*c* SCOPO'LI*a* Jac. (*G. A. Scopoli*, celebrated professor of botany, died 1789.) carniólica *Jac.* Solanàceæ. No. 2188. in p. 136.

3556 *2153*a* SEAFO'RTI*a* R. Br. (*Francis Lord Seaforth*, a botanical patron.) élegans *R. Br.* Palmàceæ. An ornamental palm. Introduced from New Holland in 1822.

3557 *2023*b* SE'CHIUM *Br.* Choko. (*Sekizo*, to fatten ; given to hogs.) edùle *Br.* Cucurbitàceæ. *Sicyos* edùlis *Jac.*

3558 1577*a* SECURI'GERA *Dec.* (*Securis*, hatchet. *gero*, to bear ; pods.) Coronílla *Dec.* Leg. Pap. Hed. Cor. No. 10504. in p. 628.

3559 1427*a* SENEBIE'R*a* Poir. (*J. de Senebier*, of Geneva, a vegetable physiologist.) Corónopus *Poir.* Cruciàceæ. No. 9207. in p. 550.

3560 1741*b* *SENECI'LLIS* Gae. (Diminutive of Senecio ?) . . . . Comp. Jacob. No. 12132. in p. 714.

3561 *1056*b* SE'THI*a* Kth. (*S. Sethi*, writer on culinary vegetables.) indica *Dec.* Erythroxýleæ. Erythróxylon monógynum *Rox.* An East Indian timber tree, growing to the height of about 40 ft., and producing yellow flowers. Introduced in 1824.

3562 669*b* SI'LA'US *Bes.* (A name used by Pliny.) pratènsis *Bes.* Umbellàceæ. No. 3630., also No. 3599.

3563 669*a* SI'LER *Sco.* (*Salio*, to shoot up ; quick growth.) trilobum *Sco.* Umbellàceæ. No. 3704. *Laserpitium* aquilegifólium *Spr.*

3564 *1002*b* *SIMA'BA* Hil. (Its name in Guiana.) guianénsis *Aub.* Simarubàceæ. Zwingera amàra *W.* A white-flowered stove shrub. Introduced in 1826.

3565 1002*a* *SIMARU'BA* Aub. (*Simarouba*, its name in Guiana.) officinàlis *Dec.* Simarubàceæ. No. 5901. in p. 354.

3566 *237*b* SI'MSI*a* R. Br. (*John Sims*, M. D., an English botanist.) anethifólia *R. Br.* Proteàceæ. A small shrub, growing about 1½ ft. high. A native of New Holland, whence it was introduced in 1825.

3567 *2034*a* SIPHO'NIA *Rich.* (*Siphon*, a pipe ; use of exudation, Indian rubber.) *Cahúchu* Rich. Euphorbiàceæ. *Hevèa* guianénsis *Aub.* S. elástica *Pers.* Játropha elástica *L.* A stove shrub. Introduced from Guiana in 1823.

3568 *1215*a* SMEATHMA'NNI*a* Sol. (*Smeathmann*, an African traveller.) lævigata *Sol.* Passifloràceæ. A shrub, a native of Sierra Leone, producing its white flowers in February and March. Introduced in 1822.

3569 *1431*a* SOBOLEW'SKI*a* Bieb. (*G. Sobolewski*, a Russian bot.) lithóphila *Bieb.* Cruciàceæ. *Crámbe* macrocárpa *Bieb.* An uninteresting white-flowered biennial. Introduced from Iberia in 1824.

3570 1547*b* *SO'JA* Moen. (*Soja*, its name in Japan.) hìspida *Moen.* Leg. Pap. Vic. No. 10289. in p. 616.

3571 540*b* SO'LE*a* Ging. (*W. Sole*, author of an essay on genus *Méntha.*) cóncolor *Ging.* Violàceæ. No. 3055. in p. 186

3572 *2159*b* *SORINDEI'A* Thou. (Meaning unknown.) madagascariénsis *Thou.* Terebinthàceæ. A purple-flowered stove shrub, growing to the height of 8 ft. ; may be increased by cuttings, and thrives in a mixture of peat and loam.

3573 542*b* SOULA'NG*ia* Brong. (*Soulange-Bodin*, a nurseryman, near Paris.) . . . . . Rhamnàceæ. Nos. 3080. 3084, 3085. and 3387.

3574 *1332*a* SPARTOTHA'MNUS *Cun.* (*Spartos*, broom, *thamnos*, a shrub ; habit.) júnceus *Cun.* Myoporàceæ. An ornamental shrub, producing its white flowers in August and September. It is a native of New Holland, whence it was introduced in 1819.

3575 1294*d* SPATHO'DEA *Beauv.* (*Spathe*, sheath ; flower sheathed at base.) uncàta *Spr.* Bignoniàceæ. Nos. 8537. 8552, and 8553.

3576 463*b* SPECULA'RIA *F. & M.* (From the ancient name *Speculum Veneris.*) . . . . Campanulàceæ. Nos. 2695, 2696, 2697, and 2698.

3577 *1056*c* SPERGULA'STRUM *Mx.* (From similarity to *Spérgula.*) lanuginòsum *Mx.* Caryophyllàceæ. Micropétalon lanuginòsum *Pers.* A curious little perennial, producing its purplish-white flowers in June and July. Introduced from North America in 1821.

3578 *83*e* SPERMA'XYRON *Lab.* (*Sperma*, a seed, *xyron*, acute.) strictum *Dec.* Olacàceæ. A New Holland shrub. Introduced in 1820.

3579 1472*b* SPHÆRA'LCEA *Hil.* (*Sphaira*, a globe, *alcea*, marsh-mallow.) . Malvàceæ. Nos. 9758, 9759, 9760, and 9761.

3580 *1573*a* SPHÆROSPHY'SA *Dec.* (*Sphaira*, sphere, *physa*, bladder ; pods.) cáspica *Dec.* Leg. Pap. Lot. Gal. Phàca sálsula *Bieb.*, Colùtea cáspica *Bieb.* An ornamental perennial, producing its red flowers in July and August. Introduced from Siberia in 1818.

3581 *1620*a* SPHÆROSTE'MA *Blume* (*Sphaira*, globe, *stema*, stigma.) propínquum *Blume.* Anonàceæ. An ornamental yellow-flowered stove twiner. Introduced from Nepal in 1828.

3582 * SPHÆROSTI'GMA *F. & M.* (*Sphaira*, a globe, *stigma*, a stigma.) hìrta *F. & M.* Onagràceæ. A curious ? biennial. Introduced from Russia in 1836, and produces its yellow flowers in August and September.

3583 *421*a* SPHENODE'SME *Jack.* (*Sphenoo*, to wedge up, *desme*, fascicle ; flws. by bracteas.) pentándra *Jack.* Verbenàceæ. An ornamental East Indian climber. Introduced in 1823.

3584 1722*a* SPIRA'LEPIS *D. Don.* (*Speira*, a spire, *lepis*, a scale ; twisted.) . . . . . Comp. Vern. Nos. 11774. 11776, and 11777.

3585 *520*a* SPIRANTHE'RA *St. Hil.* (*Speira*, spiral, *anthera*, an anther.) odoratíssima *St. Hil.* Rutàceæ. Terpnánthus jasminodòrus *Nees.* Reddish white flowers. A native of Brazil, and was introduced in 1823.

3586 533*e* STAA'*via* Thun. (*Martin Staaf*, a correspondent of Linnæus's) ciliàta *Brong.* Bruniàceæ. No. 3004. in p. 184.

3587 *904*d* STADMA'NNI*a* Lam. (*M. Stadmann*, a botanical traveller.) australis *R. Br.* Sapindàceæ. A tree, attaining the height of 30 ft. A native of New Holland. Introduced in 1823, and thrives in a mixture of sandy loam and peat.

3588 *1424*b* STANLE'*ya* Nut. (*Edwd. Ld. Stanley*, F.R.S., V. P. of Lin. Soc.) pinnatífida *Nut.* Cruciàceæ. Cleòme pinnàta *Ph.* An ornamental half-hardy perennial, producing its yellow flowers in June and July. It is a native of Louisiana, and was introduced in 1816.

3589 *1464*g* STAUROCA'NTHUS *Lk.* (*Stauros*, cross, *akantha*, spine.) aphýllus *Lk.* Leg. Pap. Lot. Gen. *Ulex* mitis *Host*, *U.* genistóides *Brot.* A hardy yellow-flowered evergreen shrub. Introduced from Spain in 1823.

3590 *1431*e* STERI'GMA *Dec.* (*Sterigma*, a support ; stamens joined at base.) tomentòsum *Dec.* Cruciàceæ. Cheiránthus tomentòsus *W.* A genus of curious yellow-flowered biennials.

3591 *1386*a* STEVE'N*ia* Adams (*C. Steven*, a Russian botanist.) alyssóides *Fis.* Cruciàceæ. An uninteresting little annual, producing white flowers from May to July. A native of Siberia, whence it was introduced in 1824.

3592 1320*a* STRE'PTIUM *Rox.* (*Streptos*, twisted ; spiral tube of corolla.) ásperum *Rox.* Verbenàceæ. No. 8676. in p. 520.

†1495 STUA'RT*ia* Cav. (*John Stuart*, Marquess of Bute, a distingished botanist.) virgínica *Dec.* Ternstrœmiàceæ. No. 9949. in p. 592.

3593 *588*a* STYLA'NDRA *Nut.* (*Stylos*, a column, *aner*, a man ; anthers.) pùmila *Nut.* Asclepiàceæ. Podostígma pubéscens *Spr.*

3594 261*b* SUCCI'SA *Vail.* (*Succisus*, lopped; appearance of roots.) pratēnsis *Moen.* Dipsàceæ. No. 1563., and also Nos. 1549. to 1558.

3595 *1198*a* SWA'RTZia W. (*Olof Swartz*, a celebrated botanist.) pinnàta *W.* Leg. Swartzièæ. A white-flowered stove shrub. Introduced from Trinidad in 1820.

3596 *1546*a* SWEE'Tia Dec. (*Robert Sweet*, F.L.S., author of several botanical periodicals.) longifòlia *Dec.* Leg. Pap. Phas. Galèga longifòlia *Jac.* A genus of ornamental purple-flowered stove twiners. They may be increased by cuttings, and grown in sandy peat.

3597 *1985*h* SY'AGRUS Mart. (The first who wrote the Trojan war in verse.) *cocoïdes Mart.* Palmàceæ. A palm attaining the height of 20 ft. Introduced from Brazil in 1824.

3598 *463*a* SYMPHIA'NDRA *A. Dec.* (*Symphyo*, to grow together, *aner*, anther.) pèndula *A. Dec.* Campanulàceæ. Campánula pèndula *Bieb.*

3599 *284*a* SYMPIE'ZA *Lich.* (*Sympiezo*, to press together.) capitellàta *Lich.* Ericàceæ. Blæ'ria bracteàta *Wall.* An ornamental Cape shrub. Introduced in 1812.

3600 252*a* SYMPLOCA'RPUS *Nut.* (*Symploke*, connexion, *karpos*, fruit.) fœ'tidus *Nut.* Aràceæ. No. 1504. in p. 88.

3601 892*m* SYRINGO'DEA *D. Don.* (*Syrigx.* a reed or pipe; corolla long tubular.) vestìta *D. Don.* Ericàceæ. Type, No. 5184. in p. 366.

3602 1122*a* SYZY'GIUM Gae. (*Zuzygium*, its aboriginal name.) caryophyllifòlium *Dec.* Myrtàceæ. No. 6984, also 6968. and 6982.

3603 *986*a* *TACHYGA'LIA* Aub. (*Tachygali*, its name in Guiana.) bíjuga *Dec.* Leg. Cæs. Cass. A Brazilian tree, growing about 20 ft. high. Introduced in 1822.

3604 1459*c* *TACSO'NIA* J. (*Tacso*, its name in Peru.) pedunculàris *Pers.* Passiflorâceæ. No. 9428. in p. 366.

3605 762*a* *TALIE'RA* Mart. (Its aboriginal name.) bengalénsis *Spr.* Palmàceæ. No. 4358. in p. 258.

3606 *886*a* *TALE'SIA* Aub. (*Toulichi*, its name in Guiana.) guianénsis *Aub.* Sapindàceæ. An ornamental red-flowered shrub, introduced in 1824, and thrives in a mixture of peat and loam.

3607 1328*b* *TAMO'NIA* Aub. (*Tamone*, its name in Guiana.) curassávica *Swz.* Verbenàceæ. No. 472. in p. 26.

3608 *1336*a* TANÆ'CIUM *Swz.* (*Tanaekes*, stretched out; stem.) pinnàtum *W.* Solanàceæ. A genus of little white-flowered annuals, natives of Siberia.

3609 *1430*a* TAUSCHèria Fis. (*Sign. F. Tausch*, prof. at Prague.) lasiocárpa *Fis.* Cruciàceæ.

3610 1580*f* TAVERNIE'RA Dec. (*J. B. Tavernier*, an Eastern traveller.) nummulària *Dec.* Leg. Pap. Hed. Euh. Hedysarum nummularifòlium *Dec.*

3611 1797*b* *TELE'KIA* Baum. (Not explained.) speciòsa *Baum.* Comp. Helian.

3612 657*a* TENO'RIA Spr. (*M. Tenore*, professor of botany at Naples.) . . . . . Umbellàceæ. Nos. 3650. to 3655. in p. 218.

3613 *1175*a* TERNSTRŒ'MIA L. (*M. Ternstrœm*, a Swedish naturalist.) brévipes *Dec.* Ternstrœmiàceæ. A genus of stove shrubs, growing about 6 ft. high, are increased by cuttings, and thrive in a good sandy loam.

3614 *2061*a* TETRA'DIUM *Lou.* (*Tetradion*, a quaternion; fructification.) trichótomum *Lou.* Terebinthàceæ. Brùcea trichótoma *Spr.* A tree growing to the height of 20 ft. Introduced from China in 1820, and thrives in a mixture of peat and loam.

3615 288*a* TETRAME'RIUM *Gae.* (*Tetra*, four, *merion*, subdivision; fruit.) odoratíssimum *Gae.* Rubiàceæ. No. 2805. in p. 170.

3616 *209*a* TETRAPO'GON *Desf.* (*Tetra*, four, *pogon*, a beard.) villòsus *Desf.* Graminàceæ. A curious annual grass. Introduced from Barbary in 1818.

3617 * TETRAPO'MA *Taurez.* (*Tetra*, four, *poma*, a cover; capsule 4-valved.) barbareæfòlium Taurez. Cruciàceæ. An uninteresting yellow-flowered biennial. Introduced in 1834.

3618 *1055*b* TETRA'PTERIS *Cav.* (*Tetra*, four, *pteron*, a wing; capsule.) *buxifòlia *Cav.* Malpighiàceæ. Triópteris *buxifòlia *W.* A stove shrub, a native of St. Domingo. It produces yellow flowers, may be increased by cuttings, and grown in a mixture of peat and loam. Introduced in 1822.

3619 2046*c* THAMNOCHO'RTUS *Berg.* (*Thamnos*, shrub, *chortos*, grass; habit.) dichótomus *R. Br.* Restiàceæ. No. 13826. in p. 828.

3620 1495*c* *THE'A* L. (*Tcha*, the Chinese name for tea.) . . . . . Camelliàceæ. Nos. 9951. and 9952. in p. 594.

3621 *411*d* THENA'RDIa Kth. (*M. Thenard*, a distinguished French chemist.) floribúnda *Kth.* Apocynàceæ. A blue-flowered stove twiner, introduced from Mexico in 1823, may be increased by cuttings, and requires to be grown in a mixture of peat and loam.

3622 1480*a* THESPE'SIA *Corr.* (*Thespesios*, divine; planted about tropical churches.) popúlnea *Corr.* Malvàceæ. No. 9812. in p. 586.

3623 *886*b* THOUI'Nia Poit. (*And. Thouin*, of the Jardin des Plantes, Paris.) pinnàta *Turp.* Sapindàceæ. A white-flowered shrub, a native of New Spain. Introduced in 1823.

3624 662*b* THYSSELI'NUM *Hofm.* (*Thyo*, to burn, *selinon*, parsley; acrid.) palustre *Hofm.* Umbellàceæ. No. 3669. in p. 220.

3625 *2085*b* *TILIACO'RA* Col. (*Tiliakora*, its name in Bengal.) racemòsa *Cal.* Menispermàceæ. Menispérmum polycárpon *Rox.* A stove climber, attaining the height of 20 ft. A native of the East Indies. Introduced in 1800.

3626 *1352*a* TITTMA'NNia Rchb. (*Tittmann*, a man's name.) ovàta *Rchb.* Scrophulariàceæ. Hornemánnia ovàta *Lk.* A pretty little red-flowered trailing annual, a native of the Society Isles, whence it was introduced in 1816.

3627 *1029*e* *TOCO'CA* Aub. (*Tococo*, its name in Guiana.) Aublèti D. Don. Melastomàcæ. Melástoma physóphora *Vahl.* A genus separated by Prof. Don from Melástoma. T. Aublèti has pale red flowers, and was introduced from Guiana in 1826.

3628 *485*a* *TOCOYE'NA* Aub. (Its name in Guiana.) longifòra *Aub.* Rubiàceæ. Meriàna speciòsa *W.* An ornamental yellow-flowered shrub, a native of Guiana. Introduced in 1826.

3629 *83*a* *TONSELLA* Vahl. (*Ravoua-tontelle*, a Caribe name.) scándens *Vahl.* Hippocràceæ. A green-flowered stove climber, introduced from Guiana in 1824.

3630 *659*b* TRACHYME'NE *Rud.* (*Trachys*, rough, *hymen*, membrane; involucre.) lineàris *Spr.* Umbellàceæ. A genus of curious shrubs, natives of New Holland. They may be increased by cuttings, and grown in a sandy peat soil.

3631 635*a* TRA'GIUM *Spr.* (*Tragos*, a goat; odour.) *Anisum *L.* Umbellàceæ. No. 3562. in p. 212.

3632 921*a* TRAGOPY'RUM *Bieb.* Goat's Wheat. (*Tragos*, a goat, *pyros*, wheat.) . . . . . Polygonàceæ. Nos. 5579. and 5593.

3633 *2108*c* TRE'wia L. (*C. J. Trew*, of Nuremberg, botanical author.) nudiflòra *L.* Euphorbiàceæ. T. macrophýlla *Roth.* A stove shrub growing to the height of 6 ft. Introduced from the East Indies in 1796.

3634 172*a* TRICHÆ'TA *Beauv.* (*Treis*, three, *chæte*, a bristle.) ovàta *Beauv.* Graminàceæ. Brómus ovàtus *Cav.* Trisètum ovàtum *Pers.* It is, besides the synonymes given above, the *Avena ovàta of Spr. It was introduced from the South of Europe in 1824.

3635 * TRICHI'NIUM *R. Br.* (*Trichinos*, composed of hairs; flowers shaggy.) alopecuroïdeum *Lindl.* Amarantàceæ. A curious half-hardy annual, producing purple and blue flowers from March to October. Introduced from New Holland in 1836.

3636 *2041*a* TRICHO'CLADUS *Pers.* (*Trichion*, hairy, *klados*, branch.) crinìtus *Pers.* . . . . A Cape shrub, introduced in 1823, is readily increased by cuttings, and thrives in a mixture of sandy-peat and loam.

3637 156*a* TRICHO'CHLOA *Dec.* (*Thrix*, hair, *chloa*, grass.) . . . . . Graminàceæ. No. 1009. in p. 56.

157 TRICHO'DIUM *Schrad.* (*Thrix*, hair, *eidos*, like; inflorescence.) canìnum *Schrad.* Graminàceæ. *Astragalus canìnus *Beauv.* No. 157.

3638 *215*b* TRICHOLÆ'NA *R. & S.* (*Thrix*, hair, *læna*, a cassock.) micrántha *R. & S.* Graminàceæ. Sáccharum Teneriffæ *L.*, Pánicum Teneriffæ of Sprengel. A pretty perennial tender grass. Introduced from Teneriffe in 1825.

3639 *1755*a* TRICHOPHY'LLUM *Nut.* (*Thrix*, a hair, *phyllon*, a leaf.) oppositifòlium *Nut.* Comp. Helianth. An ornamental yellow-flowered perennial, a native of the Missouri.

3640 591*a* TRIDE'NTEA *Haw.* (*Tridens*, a trident; flowers.) . . . . Asclepiàceæ. Nos. 3300, 3301, 3302, 3303. 3305. in p. 200.

3641 *1459*d* TRIGO'NIA *Aub.* (*Treis*, three, *gonia*, an angle; fruit.) villòsa *Aub.* Hippocràceæ. A stove shrub, a native of Cayenne, whence it was introduced in 1820.

3642 *1055*a* TRIO'PTERIS *L.* (*Treis*, three, *pteron*, a wing; capsule.) jamaicénsis *L.* Malpighiàceæ. A yellow-flowered climber. Introduced in 1822.

3643 *665*c* TROCHISA'NTHES *Koch.* (*Trochiskos*, a small wheel, *anthos*, flower.) nodiflòra *Koch.* Umbellàceæ. Ligústicum nodiflòrum *Vil.*

3644 594*d* TROMO'TRICHE *Haw.* (*Tromos*, fear, *thrix*, hair.) . . . . . Asclepiàceæ. Nos. 3515, 3316, and 3317. in p. 200.

3645 711*h* TRO'*s* Haw. (Son of Erichthonius, third king of Dardania.) poculiförmis *Haw.* Amaryllàceæ. No. 4028, also 4029.

3646 626*b* TURGE'NIA *Hofm.* (*Turgeo*, to swell; seeds.) latifòlia *Hofm.* Umbellàceæ. No. 3525. in p. 210.

3647 699*a* TURGO'SIA *Haw.* (Etr. for Pyrgosia: *pyrgos*, tower; inflorescence.) . . . . . Crassulàceæ. Nos. 3897, 3898. 3907, and 3908.

3648 *988*b* TURRÆ'*a* L. (*G. Turræa*, prof. of bot. at Padua.) vìrens *L.* Meliàceæ. A white-flowered East Indian tree, growing to the height of 20 ft. Introduced in 1820.

3649 *442*a* ULLO'*a* Pers. (*Antonio Ulloa*, a Spanish naturalist.) parasítica *Pers.* Solanàceæ. Juanullòa parasítica *R. & P.* An ornamental red-flowered stove plant, a native of Peru. Introduced in 1824. It may be increased by cuttings, and grown in a stiff rich soil.

3650 1060*a* UMBILI'CUS *Dec.* (*Umbilicus*, the navel; hollow-leaved.) serràtus *Dec.* Crassulàceæ. No. 6415., also 6418, 6419. and 6436.

3651 *1219*a* UNO'NA *L.* (*Uno*, to unite; stamens with germens.) *Nàrum* Duval. Anonàceæ. A brown-flowered stove climber. Introduced from Malabar in 1820.

3652 1580*b* *URA'RIA* Desv. (Not explained.) . . . . . Leg. Pap. Hed. Euh. Nos. 10565. 10584. and 10605.

3653 *924*a* URVILLÆ'*a* Kth. (*D. d'Urville*, a French navigator and botanist.) ferruginea *R. Br.* Sapindàceæ. A white-flowered Brazilian climber, growing to the height of about 25 ft. It may be increased by cuttings, and thrives in sandy peat. Introduced in 1823.

3654 *413*a* VALLA'RIS *R. Br.* (*Vallo*, to enclose; used for fences in Java.) pergulànus *Brm.* Apocynàceæ. Pergulària glàbra *W.* A white-flowered stove twiner. Introduced from the East Indies in 1818.

3655 *2044*a* VALLISNE'RIA L. (*Antonio Vallisneri*, an Italian botanist.) spiràlis *L.* Hydrocharàceæ. A very curious, brown-flowered, half-hardy, perennial aquatic. Introduced from the South of Europe in 1818.

3656 1464*b* VASCO'*a* Dec. (*Vasco de Gama*, a celebrated Portuguese circumnavigator.) perfoliàta *Dec.* Leg. Pap. Lot. Gen. No.10055. in p. 606.

3657 699*d* VAUA'NTHES *Haw.* (*Vau*, the letter V, *anthos*, a flower.) chloræflòra *Haw.* Crassulàceæ. No. 3904. in p. 230.

3658 1464*e* VIBO'RG*ia* Spr. (*Eric Viborg*, an acute Danish botanist.) obcordàta *Thun.* Leg. Pap. Lot. Gen. No. 10083. in p. 608.

3659 117*c* VIEUSSEU'*xia* Lar. (*M. Vieusseux*, a physician of Geneva.) . . . . . Iridàceæ. Nos. 808, 809. 811, 812, 813. 822. and 828.

3660 1548*a* VI'GN*a* Savi. (*Dominic Vigna*, commentator on Theophrastus.) glàbra *Savi.* Leg. Pap. Phas. No. 10272. in p. 616.

3661 *1617*b* VI'SME*a* Van. (*M. de Visme*, a Lisbon merchant.) guianénsis *Pers.* Hypéricàceæ. *Hypéricum* guianénse *Aub.* The Guiana wax-tree is a stove shrub, producing its yellow flowers from July to October. Introduced in 1824.

3662 *886*c* VITMA'NN*ia* Vahl. (*F. Vitmann*, prof. at Milan, 1792.) elliptica *Vahl.* Malpighiàceæ. A tree, growing to the height of about 20 ft., a native of Ceylon, whence it was introduced in 1817.

3663 *1516*a* *VOANDZE'IA* Thou. (*Voandzou*, its name in Madagascar.) subterrànea *Thou.* Legum Cæsalp. Geoff. Glycine subterrànea *L.*

3664 *20*a* *VOCHY'SIA* Poir. (Its Caribe name.) excélsa *Lam.* Vochyàceæ. A yellow-flowered evergreen stove tree, a native of Trinidad, introduced in 1825, is readily propagated by cuttings, and thrives in sandy peat.

3665 *367*a* *VOHI'RIA* Lam. (*Voyria*, name of the Caripons.) rósea *Aubl.* Gentianàceæ. A red-flowered stove plant, a native of Guiana, whence it was introduced in 1822. It thrives in a mixture of loam and peat.

3666 *85*a* *VOUA'PA* Aub. (A Caribe name.) bifòlia *Aub.* Leguminàceæ. A stove shrub, introduced from Guiana in 1823, and thrives in sandy loam.

3667 *569*d* WALKE'*ria* Schreb. (*R. Walker*, founder of Cambridge bot. gar.) serràta *W.* Ochnàceæ. A yellow-flowered stove tree, growing to the height of about 12 ft. A native of Malabar. Introduced in 1824.

3668 *1985*d* WALLI'CH*ia* Rox. (*Dr. Nath. Wallich*, superintendant of Calcutta botanic garden.) caryotòides *Rox.* Palmàceæ. A palm, growing to the height of about 25 ft. Introduced in 1825 from the East Indies.

3669 *631*a* WALLRO'TH*ia* Spr. (*Dr. F. Wallroth*, a German botanist.) tuberòsa *Spr.* Umbellàceæ. *Bùnium* alpìnum *Kit.*, Ligústicum alpìnum *Spr.* A little uninteresting plant, introduced from Hungary in 1823.

3670 *992*a* *WALLSU'RA* Rox. (*Wallursi*, its Telinga name.) robústa *Rox.* Meliàceæ. A stove tree, growing to the height of 20 ft. A native of the East Indies, whence it was introduced in 1827.

3671 204*a* WANGENHEI'M*ia* Trin. (*F. A. J. Wangenheim*, a German botanist.) Lìma *Trin.* Graminàceæ. No. 1228. in p. 68.

3672 *1737*a* WERNE'R*ia* Kth. (*A. G. Werner*, a celebrated mineralogist.) rígida *Kth.* Comp. Jac. *Dorónicum* peruviànum *Lam.* A pretty little herbaceous perennial green-house plant. Introduced from Quito in 1828.

3673 * WIGA'ND*ia* H. & B. (*John Wigand*, a bishop of Lithuania.) caracassàna *H. B. & K.* Hydroleàceæ. An ornamental stove undershrub. Introduced in 1836.

3674 510*b* WILLEME'*ria* Brong. (*P. R. Willemet*, author of Herbarium Mauritianum.) africàna *Brong.* Rhamnàceæ. No. 2923. in p. 178.

3675 *420*c* WILLUGHBÈ*ia* Sco. (*F. Willughby*, a distinguished English naturalist.) edùlis *Rox.* Apocynàceæ. A low East Indian tree, growing about 10 ft. high. Introduced in 1818. A mixture of peat and loam suits it.

3676 1552*a* WISTA'R*ia* Nut. (*Caspar Wistar*, a prof. in Pennsylvania.) Consequàna Loudon. Leg. Pap. Phas.

3677 *1212*a* WO'RMI*a* Rtb. (*Olaus Wormius*, a Danish physician and botanist.) dentàta *Dec.* Dilleniàceæ. Dillènia dentàta *Thun.* A stove tree, attaining the height of 20 ft., and producing yellow flowers. A native of Ceylon, whence it was introduced in 1818.

3678 * XANTHO'SIA *Dec.* (*Xanthos*, yellow; tomentum in some species.) rotundifòlia *Dec.* Umbellàceæ. A white-and-red-flowered green-house undershrub. Introduced from Port Jackson in 1836.

3679 2027*a* XYLOPHY'LLA *L.* (*Xylon*, wood, *phyllon*, leaf; rigidity of foliage.) . . . . . Euphorbiàceæ. Nos. 13618, and 13619.

3680 1016*c* ZENO'BIA D. Don. (A queen of Palmyra, distinguished for virtue and learning.) speciòsa *D. Don*, Ericàceæ. No. 5943. in p. 358

3681 *1821*a* ZEXME'N*ia* Lal. (An anagram of Ximenèsia.) *tagetifiòra* D. Don Com. Hel. A half-hardy yellow-flowered perennial. Introduced from Mexico in 1829.

3682 1553*b* ZI'CH*ya* Hug. (*Countess Molly Zich*, a botanist at Vienna.) coccínea *Hug.* Leg. Pap. Phas. No. 10316. in p. 618.

3683 783*a* ZIGADE'NUS *Mx.* (*Zygos*, a yoke, *aden*, a gland; two in sepals.) . . . . . Melanthàceæ. Nos. 4987. and 4988. in p. 292.

3684 650*a* ZI'ZIA Koch. (*J. B. Zizii*, a German botanist.) aùrea *Koch.* Umbellàceæ. No. 3615. in p. 216.

SUPPLEMENTARY LIST.

2701. *ABU'TILON.*

18110 - - striàtum *Dick.* striated-*flwd* ♅ ⌊_⌋ or 4 all sea. O. c. Brazil 1837. C r.lt.l Botanist, 144
A green-house shrub of great beauty, producing at all seasons, on long slender stalks, its bell-shaped orange-coloured flowers, which are strongly veined with crimson.

357. *ANAGA'LLIS.*
There are many seedling varieties of *Anagállis* in cultivation, all of which contribute greatly to the ornament of the flower-garden. The varieties at present in most general cultivation are *A.* Phillípsíi, bícolor, speciòsa, élegans, &c. Mr. Joseph Plant, of Cheadle, Staffordshire, has produced many desirable varieties, as have also other nurserymen and amateurs.

1208. AQUILE'GIA.

18111 - glaúca *Lindl.* glaucous ♃ △ or 2 my. jn Pa. Y Himal. 1839. D co Bot. reg. 1840, 46
18112 - - frágrans *Benth.* fragrant ♃ △ or 2 my Pa. Y Himal. 1839. D co Botanist, 181
This species differs from A. glaúca in having the spurs of the petals hooked inwards, and the leaves not being glaucous. The flowers are also larger and handsomer.

515. BILLARDIE'RA.

18113 17013*a* linearis *Lindl.* linear-*lvd* ♅ ⌊_⌋ or 5 s. n B Swan Riv. 1839. C l.s.p Bot. reg. 1840, 3
syn. Sóllya linearis *Lindl.*
The intense blue, large size, and great abundance of its flowers, render this species, for ornamental purposes, preferable even to the well-known S. heterophýlla.

287. BOUVA'RDIA 1740 triphýlla
β splèndens *Grah.* splendid ♅ ⌊_⌋ or 2 ap. n S ? Mexico 1838. D co Bot. mag. 3781
γ angustifòlia *Hort.* narrow-*lvd* ♅ ⌊_⌋ or 2 au. s S Mexico 1838. C s.l Pax. mag. vii. 100

3036. *CE'DRUS.*

18114 - - *Deodàra* Rox. Deodara ♀ tm 90 my Ap Nepal 1822. S s.l Lamb. p. 2. 8. 4
This is the most celebrated coniferous plant of the Himalayas, according to Dr. Royle. It is called by the Hindoos *Devadera*, or the tree of God, and is regarded as sacred by them. "In England, the specimens of it are at present small; but the feathery lightness of its spreading branches, and the beautiful glaucous hue of its leaves, render it, even when young, one of the most ornamental of the coniferous trees." (*Arb. Brit.*)

1741. CINERA'RIA 12143 lanàta *L'Her.* syn. *Senècio Heritièri* Dec.
β cyanophthálmus *Hook.* blue-eyed ♅ ⌊_⌋ or 2 ... W. B hybrid ... C lt.R Bot. mag. 3827
A very elegant hybrid, remarkable for the intense blue of its disk and whiteness of its ray.

537. CLAYTO'NIA 3014 *a*lsinöìdes *Ph.* syn. Límnia *a*lsinöìdes *Haw.*
This species, of which a figure is given in p. 185., was, in 1837, observed by Mr. Joseph Paxton, "in an elevated part of a large plantation bordering Chatsworth Park, unquestionably wild; ..... as its situation is such as not to offer any probability of either seeds or plants being conveyed there by any other means than by nature." (*Baxter's British Phænogamous Botany*, vol. iv. pl. 253.)

880. CORRÆ'A.

18115 5094*a* Harrísii Paxt. *Mr.* Harris's ♅ ⌊_⌋ or 2 ap. jn C hybrid 1837. C s.p.l Paxt. mag. vii. 79
A splendid hybrid, between C. pulchélla and C. speciòsa, raised by Mr. Beaton, gardener to T. Harris, Esq., of Kingsbury. Its flowers are of a brilliant crimson.

310. *CU'SCUTA* epilinum.
A species new to the British Flora, found on the *Linum usitatissimum*, by J. E. Bowman, Esq., at Ellesmere. T. B. Flower, Esq., found the same species on flax, on the road side between West Harptree and Cheddar, July 31. 1840; and it has this year (1840) made its appearance on a small bed of flax in the experimental compartment of the Oxford Botanic Garden.

syn. *P.* grandifl̀ora rùtila *Bot. Reg.* 1839.

62. *SA'LVIA.*

18123 - - pâtens *Cav.* spreading-*flwd* 𝔏 ⌊⌋ spl 3 all sea B S. Amer. 1838. C r.lt.l Botanist, 109.
This very splendid half-hardy salvia should find a place in every flower-garden. It is of the easiest culture; either by cuttings, which will root freely in a warm border under a hand-glass, if put in early in the season; or by seed, which, however, is but sparingly ripened in this country.

44. SCHIZA'NTHUS.
In the body of the work this genus has been inserted at p. 16. in the class Diándria, and also at p. 534. in class Didynàmia, it will be necessary therefore to cancel it from p. 534.
A very distinct and desirable variety, from the great dissimilarity in the colour of its flowers to those of any other, being white with bright yellow lower lip, was raised by Mr. Priest of Reading, in 1833, and is now become pretty general in flower-gardens, under the name of S. Prièst*ii*. It is figured in Mrs. Loudon's Ladies' Flower-Garden of Ornamental Annuals, pl. 42. f. 5.

1141. *SPIRÆ'A.*

18124 7146*a* barbàta *Wal.* bearded 𝔏 △ or 2 jn W Nepal 1835? D co Bot. reg. 2011
This is synonymous with the Hotèia japónica of *Mor. and Decaisne.*

3689. 739*a*. SPREKE'LI*A*
A new name given by Mr. Herbert to a portion of the genus Amarýlli*s*, of which A. formosíssima is the type.

1322. *VERBE'NA.*
The great beauty of the flowers of several species of this genus, and their peculiar adaptation to summer and autumn ornament, have caused them of late to be carefully attended to by the trade and by amateurs, and consequently many and very elegant varieties have been produced. The following, not enumerated in the Supplement, are in most general cultivation: *V. Melindres* supérba, splèndens, Tweedi*àna* supérba, Arrani*àna*, Neilli*i*, Eyeri*àna*, Hylándi*i* (nearly allied to Aublèti*a*), shrubby pink, &c.

ALPHABETICAL LIST

OF

ALL THE GENERA GIVEN IN THE BODY OF THIS WORK

WHICH HAVE UNDERGONE ANY CHANGE IN THEIR NOMENCLATURE SINCE THE PUBLICATION OF THE SAME,

TOGETHER WITH THE NAMES OF GENERA DIVIDED FROM THEM.

GENERAL INDEX,

COMPREHENDING

THE SYSTEMATIC AND ENGLISH GENERIC NAMES, AND THE ENGLISH AND SYSTEMATIC SYNONYMES IN COMMON USE.

In this Index, the systematic names are distinguished as classical, i. e. names applied to plants by the ancients, by the first letter being in Italic, as *A'bies*; as commemorative, by the terminating letter or letters being in Italic, as *Bánksia*; and as aboriginal, or of uncertain derivation, by the whole word being in Italic, as *Æ'rua*. All the other names are formed, in almost every case, from the Greek, but sometimes from the Greek and Latin. Where *n.* is added after the name, it refers to the note: *s.* indicates a synonyme.
